Skywarn is very imprtant but there are many other fun reasons to get a
ham license. How about the chance to chat with people all over the world?! How
about the chance to talk to astronauts in space?! The chance of helping out
during public events, disasters, etc. Go for it, it's a lot of fun!

>--
Just a thought, but you might find people more open to your ideas/comments
if you would stop pointing out whether they are right or wrong. The whole
point of usenet groups is to discuss ideas, share opinions etc. It is not
to continually point out who is wrong and who is right. The sharing of
ideas is the point. A discussion requires listening as much as it does
talking. This is not intended to be a flame, just a suggestion, as you do
have interesting points of view to contribute to the NG but the delivery
could be a little more diplomatic. Most people dont like being told they
are wrong or "somewhat correct" , you might find people are more willing to
discuss things that way.

I had a Kenwood RZ-1 that had a video output. It ran through one of
those RF Modulators from radio shack. I scanned and scanned but only
found a couple of interesting things. It was not worth the trouble.

Have you failed to read the rest of the thread?

The FCC interpets that rule, to mean that only HAM frequencies, as in,
a novice can use a advanced frequency.

They have stated that it does NOT mean that a HAM can use a public
safety frequency in an emergency.

Check out the PCR-1000 mailing list on QTH.NET. There are least 5 amateur developers on that list and many of the others have programmed it on that list. There are some websites for the PCR-1000 which have the command sets documented which are in the archives of the list. Most importantly get PCR1000BUR (EEPROM Backup and Restore program) before attempting to program it. The PCR has a habit of losing its eeprom settings since there are no lockouts in the protocol for the write and read commands.

Whatever floats your boat Ted. I also did own a 2006 for a couple of years. It was indeed a remarkable radio, and I am sure with the Optocom and software even more amazing. I however travel for a living over 12 States by car and enjoy the portability of the Icom. I, strangely enough have not experienced the negative issues that I have read about it. It has been both sensitive, selective, fast enough (I admit no trunking) and decent audio that I am satisfied. I was only mentioning the 3100 from the standpoint that it was the "ultimate" toy and perhaps someday I would be interested in that level of performance. Have fun.

Not so fast, Johnny! You posted one on-topic post among 12 or more off-topic posts that you have littered the newsgroup with the past day. 13,000 posts, and now you can proudly assert that 10 were on topic. Yippee!

5905. Diamond X500HNA Antenna

Newsgroup: rec.radio.scanner
Date: 1998-09-13 00:00:00 UTC
From: Carl Domanico <cmd-dell@worldnet.att.net>
Message-ID: <35FBDDD9.3E997ACC@worldnet.att.net>
Source record: 144224

Hi I wonder if there is someone out there who is very familiar with the Diamond X-500HNA Dual Band 144 / 440 Vertical Antenna.?? Recently, I purchased one and installed it on the roofï¿½. Anyone familiar with this type of design Antenna knows that there are no user adjustmentsï¿½.you just put the sections together attach your coax and your radioï¿½.I initially was using an older comet 144 / 440 a CA-2X4Zï¿½.it worked fine for about 8 yearsï¿½then I found it developed a problem with the S0-239 connector at the baseï¿½it seemed to have literally fell apartï¿½but as for the Antenna weï¿½ll it worked great for 8 yearsï¿½.great signal and great matchï¿½.Anyway I decided to go out and put up a new Antennaï¿½so I sprung for a big $ 240 for this Diamondï¿½a bit heavy in construction and it has an N connector at the basses even sprung for this LMR-400 Times-Microwave coax cableï¿½Weï¿½ll after the antenna was erected and this great cable was installedï¿½I proceeded to make an swr graph on both bands from one end to the otherï¿½.Weï¿½ll after checking 440 MHz..I was pleased..since the swrdid not exceed 1.5 from one end to the otherï¿½However, on two meters it was a horse of another colorï¿½It seemed that the bandwidth started a bit higher than it should haveï¿½down on 144 MHz I was getting 2.0. as I moved up the band it seemed to start to dropï¿½at 145 MHz..it was 1.6 ï¿½and then as I moved up further it came to a more normal readingï¿½I even went past 148 MHz and found it to be goodï¿½.Bottom line is the antenna was tuned to kick off a bit high than it shouldï¿½I called Diamond and they were very nice about it..They said I could send it back to them to have the Antenna Re-tunedï¿½Now this is all well and good but that means I would have to take it down..package it up..ship it to the West Coast from New Yorkï¿½pays shippingï¿½And then when I receive it back put it back up and hope it is correctly tuned.. There are no user adjustmentsï¿½and even if there were you have to be carefull that you donï¿½t knock the other Band out of wack..while trying to adjust oneï¿½What I need to know from someone who is very technically familiar with this antennaï¿½Is there a way I can Make an adjustment on it to bring the SWR back to where it is below 1.5 from 144 MHz..To ï¿½148 MHzï¿½.The Technical Design is 5 / 8 wave three- element C-Load antenna (2 Meters) and 5 / 8 wave eight-element C-Load antenna (70 cm).. I have various test gear..a Bird Wattmeterï¿½High End Digital VOMSï¿½a couple of SWR Metersï¿½and some good common senseï¿½.If anyone out there in the Radio field can help me out here I would be indebted foreverï¿½..

Thank You Very Muchï¿½.Carl M. Domanico N2MFW

Mr. Cheek's account has been cancelled ?

Yeah... too bad about radio newsgroups. If someone posts too much
(even though appropriate), many call him spammer and try to get rid of
his ISP account for no reason. It's not as bad as in
rec.radio.amateur. but start to happen in scanner newsgroup too ????

What you CAN do, is tune in an ATV (Amateur Radio Television) on the ham bands (depending on where you live, try the frequency for Ch. 65), and feed the DESCRIMINATOR output (NOT the speaker output) into the video input. Most transmissions of this type are Wide-Band FM (25-50 KHz bandwidth).
The quality sucks, but oh well :-)

So you would recommend using the 50 Ohm RG8 over 75 Ohm RG6 for overall
scanner performance?

5924. 235 vs 895 talk group differences

Newsgroup: rec.radio.scanner
Date: 1998-09-13 00:00:00 UTC
From: footdoc@zebra.net
Message-ID: <6thd6irk1@nnrp1.dejanews.com>
Source record: 144243

I've been using a 235xlt in standard system default and just got a 895 in standard system default. The 235 gives talk groups like 200-1 or 200-0. The 895 gives 5 digit talk groups. For example, police main is 200-0 on the 235 but has lots of different talk groups in the 5 digit format. Why is there a difference in group configuration? I thought the scanners were basically identical in function. Please send private email! Larry

5928. Pro-Turbo New Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1998-09-13 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <35fc3653.31850292@news.iaw.on.ca>
Source record: 144247

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.
You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to give it a try, you can download the
program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

The improvement was probably due to the PL-259 connector's being
replaced with bnc or type f's!

For many - many years, I have been using 75 ohm coax (RG6 & RG59) for all of my shortwave, VHF/UHF and SHF needs. It is cheap (very cheap --> 6 to 10 cents a foot) lower loss then the comparable 50 ohm cable and the "F" connectors are cheap too. And I use adaptors directly at the radio to "convert" from UHF, BNC or N connectors. I have transmitted with up to 100 watts for years too, with no ill effects. Rene - VE6WCA (ex PA0YS)

SLICED----------

The one other problem that the others have seemed to have missed is theft!!
I had a person next to me at a Pocono event that tried to "Lighten my load
for me"
I stopped him on time but here are a few pointers! :
Try wearing a jacket with an inside pocket and place the radio there. I have
experienced
though from time to time that this can reduce sensitivity.
Make a "leash" that can be tied to your belt loops or wrapped around your
hand.
Or if all else fails KEEP it in your hands!!
Also if the worst does happen have a card in your wallet with the model and
serial #'s on it
So if it does get lifted you have proof that it is yours!!
Remember a lock is only there to keep an honest man honest!

Want to be a Ham Radio Operator?

Now you can get an Amateur Radio license without learning the Morse code.
First, you need to study the FCC Rules that apply to Novices and Technicians, some antenna theory, and electronics theory. Next, you take a 30 question multiple choice test and a 25 question multiple choice test. You can buy a book with all the questions and answers in it at Ham Radio Outlet or any Radio Shack store ..and start studying.
If the Morse code does not scare you, you can get beginning code practice tapes with your study material and start with the Novice license which requires ability to copy code at 5-words per minute.
A Novice gets more HF privileges (longer distances) and a codeless Technician gets more VHF and UHF privileges. If you add the code at 5-words per minute to the Technician license, you get all of the Novice and Technician privileges.

If you are interested in computers, you can access bulletin boards and contact other computers via packet radio. Technicians can also get involved with Amateur TV, microwave transmission, satellites, earth-moon transmissions, community service, transmitter hunts, and use mobile UHF and VHF radios.

For more infor contact www.arrl.org and www.nocode.org

Joshua,

I have been into scanners for quite a while. I had the technical background
to
get a technician license without much effort. My wife also got her license
by
simply studying the technician question pool and taking sample exams.

It's a great hobby and I'm learning more each day.

You can get a book called "Now You're Talking" at Radio Shack (which my
wife and I used) and take practice exams on the web:

http://w5ac.tamu.edu/ham-exam-v2/ham-exam.html

Hope this helps.

As I recall (from the TT manual), these "private calls" are blocked just
like cell phone freqs are blocked. Of course, that doesn't prevent the
poor man's TT. (That's where you program the freqs in desending order, L/O
the control channel of the day and press Scan a lot. Of course my freqs
are programmed in desending order by chance ;-)

I always thought AR1000 and variants were all full coverage but if not a
full reset of the CPU should do the trick for you.

http://www.javiation.co.uk/cpu1.html

Note the slight variations in keypad routine depending of which version
of the family you have and you will clear all memory channels and search
banks.

Hope that helps, have fun.

Mike,

The 2004 price ranges from $225 to $290, depending on the shape it`s in, does it have the box & manual, is the back light bright & how bad a person wants it. It`s a great scanner with lots of mods available from Bill Cheek. I hate to see you sale it, but good luck.

If anyone REALLY wanted one bad enough they could take a trip to the
Sawgrass mills RadioShack in Sunrise Florida and get 10 or 12 of them
for $12.97 a piece. The boxes are not in the best shape but I'm sure
that they carry the standard warranty. For the price it is a great
little scanner with a Motorola antenna plug and no earphone
jack..but...if it breaks in the next year I'll be in luck!

Kevin,

Ask any volunteer fireman about his Plectron (sic), and he can probably tell you how to get one. HOWEVER, if you're not in that situation, why not just get a good, small scanner. You can get those too and, should you only want to monitor one frequency...you can do that.

From: jackwy@clark.net
Message-ID: <6tk4nadqm1@clarknet.clark.net>
Source record: 144048

I bought a Pro-2040 at a flea market recently and after
firing it up I noted a couple of things.
First it seems to have very poor sensitivity in the 800 MHz
ranges (lots of local police use it here). It this characteristic
of this unit?
Second, the audio seems really bad on some frequencies.
Does this unit have a problem with internal interference with
the audio or just generally have poor audio?
Any info appreciated.

Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 fee for 200 hours use of the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83
and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner

owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for | Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855. email rlassoc@inav.net

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder

on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also

archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than 70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. This article describes a few of the FM receivers in my collection, and other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Aug 1998 - Sony SC1PC portable

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally

generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot

be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be

arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service

Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older

Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as

federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during

search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby

SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other

owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be

loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound

Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod,

especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT

but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test

results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no

scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel

programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state,

and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central

time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

http://patent.womplex.ibm.com

>Remove "nospamno" to email.

I don't think that is true: Monitoring the EDACS system used here in Riverside County (noting current TrunkTrackers from Uniden/RS don't follow), when a phone call is patched thru the system, it is somehow "given" the frequency it is assigned to for the duration of the call (system only allows 3 minutes). During that time, other than warning beeps at minute intervals, and a series of beeps when the 3 minute limit approaches, one does not hear any other "control" tones or the like. This would seem to indicate phone calls are handled differently by the system, not within the normal talkgroup scheme. It will be interested to see if anyone can verify this...

At any rate, it would also be interesting to hear whether or not this limitation was built in by the radio system designer due to the law, or some technology limitation...

Dave

5997. CTP Freq Inv Descrambler Royalty program

Newsgroup: rec.radio.scanner
Date: 1998-09-14 00:00:00 UTC
From: ctpds49@aol.com
Message-ID: <1998091401404900.VAA13766@ladder03.news.aol.com>
Source record: 144079

Thanks for your interest in the CTP Royalty program.

Here is how it works.

1. You place our banner on your web page. This
will consist of a banner gif Picture of our DS49 Speech Inversion
Descrambler and text advertising it.
Once you place this banner on your
page you are done. There is nothing else to do. You are
given a number that goes after the Descrambler model number
right on the banner.
ie... DS-10. When someone calls us to order
with a credit card or orders through the mail using
your number, you earn a $5.00 royalty for that sale.

2. Royalty checks will be mailed at the end of each quarter.
ie.. end of March/ June/ September/ December.

3. You can email us at any time for an update of your sales.

4. Sales will greatly depend on the amount of traffic your site
gets daily, so increasing your site traffic through search
engine registration and link exchanges will help us both.

5. For each sale where the customer does not remember the model
number, ie... DS-10 we will asign the sale to the next
name on our list of program participants. This way eventualy
you will get credit for a sale even if the customer cant
remember the model number.

That's all there is to it.

If you are interested in participating in the CTP
royalty program Email us at ctpds49@aol.com
your name and mailing address
and url of your web site and we will send you the banner asap.

Thanks for your time.

Hold down the 2, 9, and 'man' keys while turning on the radio to
completely reset it (erase ALL stored freqs).

Not sure if it works on the 200 (it does onnthe 235), but holding down
the 'l/o' key for about 2 seconds, then hitting the 'e' key will clear
all lockouts."

If you want to use Probe you are going to have to install a OS535 in
your PRO-2042/2035 or an OS456 in your PRO-2005/2006 OR MAYBE you
could get a new Optocom unit and it MIGHT support is now or in the
future. If not you are SOL, if you had an 2005/2006 you could get an
OS456lite board with no PL,DPL or signal strength decoding for only
$100 and I think that's all they offer now anyway besides the OS535,
good luck!

I brought my RE Alpha2000 to the Busch race in Richmond, VA last Friday and
it was awesome. The CTCSS capabilites reduced intermode problems
significantly. The alpha readout was nice too. I would highly recommend
this scanner for NASCAR races. You can get more info at
http://www.racingelectronics.com/

Not really, there actually is two models of the Pro-26 that have been
sold by Radio Shack. The first Pro-26 was a small crystal scanner that
was made by GRE. The later version of the Pro-26 was a 200 ch. scanner
that was made by Uniden.

At the very least you will have to plug a cord from your earphone out
jack on the scanner to the input of the soundcard, a microphone will
not work.

I disagree. Opening those holes will let in too much energy. Better to
leave the bag intact and tie it up tight under the chin.

well grass-sniffer

problem is they are not in use

won't be until next year, maybe.

The mayor is having problems with
the final details of how the `
system will work...plus do women
officers get pink phones to go with
their under-panties. ?

it's going to be digital...the next
generation. That's what i was told.

also, new listening radios will have
to be made for SF. if it's allowed.
that means only the Press will be
privvy at first...then two or 3 years
later, as with Motorolla, they will
be commonplace items.

bill conduit
etc.

there is a list of them in
any Radio Shack Police Call book.

no workee now....just there.

Yea, sometimes you can do it & get away fine! Other times it causes
problems. I have seen things like you describe to be the cause
or contributer of intermod (especially when using a lot of converting
connectors).

<Neil.Ripston@bigfoot.com> writes

Hi Neil,

>If you have an AR 880 Manual or a copy of one, please email me. I will pay
>$8.00 for a copy.
>

AOR (UK) have just "revamped" their web pages and they now provide .pdf
file downloads of several manuals together with other details.

Main AOR (UK) Ltd page
http://www.demon.co.uk/aor

Most (all) the files are actually on a different server:

http://www.aoruk.demon.co.uk/

The direct link for the AR880 manual/leaflet is:

http://www.aoruk.demon.co.uk/880m.pdf

Hope that helps.
Cheers,

My Nescape got a severe case of indigestion and shut down on your Java
so I didn't get to your scanner section. Could you put a way to get in
without going through the page with the Java apps on it? I'd really like
to look at it. Richard

Anyone know of a single frequency receiver radio to be used to monitor just fire dispatch? I seem to remember seeing an ad for one in one of the scanner magazines a while ago - it was recommended for those who work for volunteer fire departments. It was manufactured by a company somewhere near Santa Barbara, California. Any help in locating one of these would be greatly appreciated!

> please help.

Hi Joshua,

If you are in the USA I suggest you go and check out the ARRL site.
They are the primary group affiliated with Amateur Radio in the USA. In
Canada it is RAC and the UK is RSGB.

Despite what others might tell you, I still believe that Ham Radio is
the greatest hobby in the world! Like anything in life you get out of
it what you put into it. I like scanners too, but they lack the
"interactive" side and let's face it, there are enough spectators in the
world already! 8-)

People often criticize Hams as being geeky, nerdy or propellor heads.
That's often true too! But many of my friends are Hams and none of us
are any of the above. Hams have great Hamfests, organized field days,
digital and analgue networks, satellites, public service organizations,
help out with local non-profit events and much more. Try that with
stamp collecting!

Cheers!
Andy

6038. AOR 1000 Mods

Newsgroup: rec.radio.scanner
Date: 1998-09-14 00:00:00 UTC
From: Paul Heaton <pheaton@sunlink.net>
Message-ID: <35FD43E1.76E47E77@sunlink.net>
Source record: 144120

About 2 years ago I purchased an AOR 1000 scanner from a noted dealer. This scanner was without the 800 Mhz. activation so the dealer had a plan that after I would purchase the scanner I could send it back and have the radio modified for $40.00.

Well I received the scanner and was so happy with all of the other functions that I soon forgot that I was not able to receive 800 Mhz. Once I finally remembered I contacted the dealer to see about sending it in for the modification. I was informed that this was no longer available as it was against the law. One could only do this at home with special equipment and software. However, the dealer continued we no longer will provide the hardware or the software to do this mod yourself.

Is there anyone out there in Cyber land that has the equipment and knowledge or could help me in this endeavor? Please respond.

6041. BNC (ug) connectors for RG6 cable?

Newsgroup: rec.radio.scanner
Date: 1998-09-14 00:00:00 UTC
From: jsmith@ix.connect.net
Message-ID: <35fd5e33.139515365@news.millennianet.com>
Source record: 144123

Does anybody know if the Radio Shack UG-89 (I think that is the designation) connectors will fit RG6 coax? I checked the specs for the cable, and for RG59 cable which these connectors are made for, and the RG6 appears to be a little larger in diameter. Does this really matter? What are others using to connect RG6 to their scanners?

You claim "They have stated...". Please clarify.

Please cite Federal law or official statements of policy from the FCC.

I'll cite FCC part 97:

S 97.403 Safety of life and protection of property.
No provision of these rules prevents the use by an amateur station of
any means of radiocommunication at its disposal to provide essential
communication needs in connection with the immediate safety of human life
and immediate protection of property when normal communication systems are
not available.

I visited my local Radio Shack recently to order a service manul for my Pro 43 as I had read about the problems described below and he placed the ordr with no problems. When the manual arrived it was a photocopy with a note to say to avoid added costs the manual was copied from an orginal by Radio Shack. But as you can see I had no problem at all in getting the manual. This was approx one month ago.

I'm interested in using Probe with at least one of my scanners (Pro 2042, Icom R10, Pro 60) but do not want to shell out the $185+ for an OS interface. Is there any way to build one that would be compatible with the software and the scanner? (I know the 2045 is the obvious candidate for computer control, but that's my baby, and I'm afraid of screwing it up) Would an interface for the R10 work?

Try buying ScannerMaster for Massachusetts.

Just to keeep you from a big dissapointment, All Worcester Municipal functions are using a G.E./Erickson Trunked system. It is intentionally filled with SHIT that annoys the listener.

No scanning by Police/Fire... you get all of them, all the time (I hope you like listening to the water dept. or sewer dept, most of them are childlike morons who hold their radios up the the music all day)

OR spend a mint, buy 2 scanners and a PC and run a mediocre program that might allow you to listen to some of the action, sometimes.

PS Worcester EMS is 462.950

From: talley@earthlink.net
Message-ID: <09980815164119.OUI44.talley@earthlink.net>
Source record: 143938

I've been looking at various options for monitoring Trunked Systems in the LA area and wondering if it's worth the effort. It looks like the LAPD is still using conventional single chanel equipment. A web site which lists trunked sysems has LA County using an Ericcson system. Does anyone know if the Opto and Bearcat hardware will handle Ericcson???

6071. Need Bearcat UBC100XLT Circuit.....

Newsgroup: rec.radio.scanner
Date: 1998-09-15 00:00:00 UTC
From: "Glenville." <gsawyer@dove.net.au>
Message-ID: <35fe7458.0@news.mtx.net.au>
Source record: 143948

HI, there - Yes I am a new subscriber to this newsgroup, but where else can I look for the sort of info that appears here ! :-)

I have a Uniden UBC-100XLT scanner that appears to be "dead in the water"

The Microprocessor section appears to work, i.e I can prog Freqs in, scan / Manual
up/dn, Light works etc etc,

No audio output, voltage appears to be low on the Receiver P.C Board.

What I would really like is a scanned copy of the Circuit Diagram, and perhaps
an "overlay" of the P.C Board layouts, (to identify where the parts are from the
Circuit Diagram)... Well you know what I mean !

If any of you out there are prepared to assist me I would be most appreciative,
Grateful... etc etc etc - like HAPPY.

Would like to get this one going again, it does not have the 800Mhz unit - if this makes a
difference to the circuit that I need.

If you CAN help, then perhaps via my email address would be the way to go...
email: helpscan@gsawyer.mtx.net

I really look forward to hearing from someone on this NG that is prepared to help.

Thank you and all the best.

Glenville.

From South Australia - where it is still cold !

I used to do that all the time on my conventional scanners before I
bought the TT's. On one of the two trunking systems here there are
three frequencies that are used exclusively for phone patches, and the
conversations stay on the same frequency from beginning to end.
Unfortunately, I can usually only hear one side of the conversation.

Remove "nospamno" to email.

Hi. I'm quite new to this CB Radio thing. I have browsed through several web sites and got a bit of information about CB Radios.

I would like to make my own CB Radio so that I can communicate with my friend who stays about 3 Kilometers from here. Does anyone have any ideas of suggestions? I know how to make a CB Receiver with just a few components and I'm sure a tranceiver can be made that way too.

If anyone can give me information on how to build my own CB Radio or links to web sites that shows how, I would really appreciate it.

Thanks in advanced.
Brian. :)

>
>Are these even LEGAL in the UK? I thought they had serious bans on monitoring

There are no restrictions on the sale, ownership or frequency coverage
of receivers in the UK.

The Radio Communications Agency Web site has a little more detail:
http://www.open.gov.uk/radiocom/rahome.htm

Information Sheet RA169 relates to Receivers/Scanners:
http://www.open.gov.uk/radiocom/ra169.htm

A licence is not required for a radio receiver as long as it is not
capable of transmission as well (The Wireless Telegraphy Apparatus
(Receivers) (Exemption) Regulations 1989 (SI 1989 No 123). The
exception to this is that it is an offence to listen to unlicensed
broadcasters (pirates) without a licence. Licences are not issued for
this purpose.

Although it is not illegal to sell, buy or own a scanning or other
receiver in the UK, it must only be used to listen to transmissions
meant for GENERAL RECEPTION. The services that you can listen to
include Amateur and Citizens' Band transmissions, licensed broadcast
radio and at sea you may listen to weather and navigation information.

The "chances" of you actually having problems are very slim and whilst
reports of people having equipment confiscated and being hauled in front
of the courts are sometimes seen these would normally involve
circumstances a little more serious.

All the best
Cheers,

6098. Updated! Pro-Turbo New Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1998-09-15 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <35fe9016.14809817@news.iaw.on.ca>
Source record: 144003

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes 2 groups of 4 user definable meters! Now you can
have that center tune meter that you have always wanted.

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.

You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to have a look, you can get more information
on the program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

>I live in Oakland, and even though I don't have a Trunk Radio, I really
>enjoy listenning to BART. I always figured that most of what I would hear
>with both the BART trains and Bart Police would be pretty boring, but I
>hear some very interesting stuff with them.

I live in Redwood City and I pick up BART traffic very clear. The have a very good repeater system but then they would need to. When I first tried a scanner, I just used the search function and I was hearing police calls for the Richmond area. I never checked the frequency but it must have been the BART PD.

I bought my scanner primarily for listening to railroads. I can hear CalTrains but for the most part it's pretty routine. I can also hear UP over in the East Bay but I have a problem following stuff sometimes as I don't know the tracks over there that well. I can also hear the SJ trolley clearly most of the time.

I live under one of the approach paths to SFO and listening to the aircraft traffic is pretty interesting. Most of the time I can't hear the tower (handheld antenna only so far).

Geez, you're not asking for too much, are you? Ever consider buying Police Call, Scannerbase CD-ROM, or Mass Freq Guide--not sure of the precise name, but it's a very good reference that can be bought from You Do It in Newton-- or Scanner Master, another very thorough reference?

There also happens to be a few good web sites with the info that you want if you bother to do a search.

S 97.111 Authorized transmissions.
(a) An amateur station may transmit the following types of two-way
communications:

...

(2) Transmissions necessary to exchange messages with a station in
another FCC-regulated service while providing emergency communications;

...

S 97.111 authorizes transmissions. It does not restrict the frequency
in this authorization.

Other provisions of Part 97 restrict the frequency you may use in normal
situations. These provisions do not matter in a "97.403" (covered by
97.403 "Safety of life and protection of property") situation. (97.403
is quoted above).

i.e. (in simpler terms)

In the right emergency situation,

1) S97.111 (a)(2) authorizes transmissions. Frequency is not restricted
in this provision of the rules.

2) S97.403 means that "No provision of these rules prevents" you from
using any frequency in an appropriate emergency situation.

3) Other provisions of Part 97 restrict your choice of frequency under
normal conditions, but don't apply if S97.403 (or S97.405) does.

Whether or not you'll lose a court case is another thing entirely.
Money and connections with big brother often talk louder than the law.

The "safest" choise is to not make any emergency transmissions on
non-ham frequencies unless the emergency is serious enough that you'd do
it even if you knew you'd be convicted of illegal transmissions.

: As for radar detectors being "burglar tools" thats taking things a bit far,
: don't you think?

: Eric (N7ZZT)

Well, some outdoor alarm systems do use RF microwaves [radar].
Question is it in the band the detector covers.

An aresol can can be used to detect light beams, so does that make it a
burglar tool also ?

6108. Buying & Selling, forms of payment on the net

Newsgroup: rec.radio.scanner
Date: 1998-09-15 00:00:00 UTC
From: cbake777@aol.com
Message-ID: <1998091519211200.PAA13049@ladder01.news.aol.com>
Source record: 144013

For the newbies that haven't experienced the thrill of buying and selling equipment on the internet, this might help you.

Generally speaking, when you have a product for sale, make the subject line clear so that the group can decide easily whether to view your post.

Example:
"FS Pro60 $150.00 obo" is much better than "Scanner for sale"

Also, indicate that you would like all interested parties to respond directly to you via email and whether your price includes shipping. Also indicate whether you have original box, manuals, acessories etc.

Once you have struck the deal, you have to get the scanner to the buying party. You can use any of the standard shipping companies like Mail boxes etc (very $$$, not recommended) UPS (cost effective but sometimes veeery slow), FED EX (Fast but $$$) etc. Personally, I prefer the US Postal system 1st class mail (2-3 days, inexpensive and protected by mail fraud if party doesn't pay or pays by bad check).

You can request payment in several ways:

COD, costs extra to have this service but the package will not be left without payment. Probably the fastest way for them to get the scanner at the lowest cost.

Prepaid moneyorder via US Postal service. Safe & secure but they have to wait for you to receive the payment before you ship. They have to trust you!

Personal check. Usually the longest way, most sellers require the check to clear before shipping.

Hopefully this will help those of you that haven't bought or sold products through a newsgroup. I have sold climbing equipment, camera equipment and a scanner and have bought a scnner as well. Every time though, I have requested the buyer/sellers phone number to call or have them call me directly. I can usually feel someone out and get/give more specific answers about the product this way.

Look up the definitions of "amateur station" and "amateur service."
Then look at the frequency tables available to the "amateur service."
(It takes a little detective work, but you'll eventually come to the
correct conclusion.)

>Even if your definition is correct, you are allowed to use
>"any means of radiocommunication at its disposal." (S 97.403 quoted
>fully below) There is no requirement that the equipment be part of the
>"amateur station". If you know of such a requirement, please cite a
>reference from federal law or official FCC policy.

The "its" you reference above refers to "amateur station" - no fair
taking it out of context: "... an amateur station ... at its disposal."
Just what equipment would be at the disposal of an *amateur station*?

I have looked at the definitions. I have come to the conclusion that
you are wrong. Please feel free to provide references to convince
me otherwise. Simply stating that you have made some logical
inferrences does not constitute proof.

I see nothing in part 97 forbidding possession of equipment capable of
transmitters capable of transmitting of outside ham bands. If you see
any such prohibitions, please cite them. You are claiming that part 97
forbids hams to possess equipment that can transmit outside of ham
bands. Would you contend that a ham can't own a CB radio, a family
service radio, licensed radios for other services, etc.?

As far as I know, there is no prohibition, even on non-hams, of owning
equipment capable of transmitting on any frequency, but there are
restrictions on transmitting. (There are some restrictions
on "external RF power amplifiers".) Perhaps you know of some such
restrictions and can cite federal law or official FCC policy. I would.
be interested in any such information.

Q. Just what equipment would be at the disposal of an *amateur station*?

A. Anything you own, or can borrow, build, modify, etc. at the time of
the emergency. Disposal clearly means anything the operator can make
use of at the time.

I've seen one- or two-channel crystal-controlled receivers. I think
they run about $60 or $70. For that kind of money you could buy a
10-channel scanner. Program the fire dispatch into channel 1 and set
it as priority.

Please cite federal law or official FCC policy that "Radios capable of
transmitting on police frequencies don't fall under the catagory of
"amateur station."

Even if your definition is correct, you are allowed to use
"any means of radiocommunication at its disposal." (S 97.403 quoted
fully below) There is no requirement that the equipment be part of the
"amateur station". If you know of such a requirement, please cite a
reference from federal law or official FCC policy.

That's not a citation. That's a name.

Do you have an actual, verifiable, statement by this person, or just
his name?

6137. Antenna Questions

Newsgroup: rec.radio.scanner
Date: 1998-09-16 00:00:00 UTC
From: stevek@io360.com
Message-ID: <slrn6vvr92.8ue.stevek@spheara.horizonlive.com>
Source record: 143886

I have a couple of questions about antennas, and any help or pointers to other sources would be greatly appreciated:

I have a BC235, and although I got it so that I could be able to listen to 800Mhz trunked systems, I'm also interested in monitoring local railroad communications. The railroads of interest (LIRR, NYCTA) all operate on about 160MHZ (FRA frequency range).

I've found that my reception quality has been less than what I expected (If I'm sitting next to an operating cab, I hear the RR radio picking up things on the same channel clearly that are unintelligable on my set). and I'd like to improve it. I've already gotten myself the Radio Shack Whip (20-006?) with the loading coil, and follow their instructions for tuning it (keep the top 4 sections only extended).

I've also noticed that the LIRR railcar radio sets all use a strange looking antenna mounted on the roof of the cars -- it is about 1" wide, 3" high, and about a foot long. It is shaped something like a C-clamp, although it may be attached at the other side (not sure):

XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXX XXXX
XXXXXXXXXX XX
XXXXXXXXXX XXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXX

a matching transformer?

Thanks for any insight -- I'm pretty new to this..

Bill,
Someone replied to me by e-mail saying tht RS will shortly come out with a new reciever that will handle Ericcson. I'm suprised that the techies at Optoelectronics didn't built that into their OptoTrakker or their hybrid/GRE radio. Regards Richard

6139. PRO-2004 Questions

Newsgroup: rec.radio.scanner
Date: 1998-09-16 00:00:00 UTC
From: leigh@rain.org
Message-ID: <6torij$2on$1@news.rain.org>
Source record: 143888

I recently picked up a PRO-2004 scanner for a mere $100. Following are several questions:

--The display is dim, and pressing the "dimmer" switch has no effect. Any suggestions on where to start trouble-shooting? I hope it's not the LCD display itself going bad, as I suppose that's now unreplaceable, right?

--Mine is missing the antenna. (I'm using a 2 meter telescoping half-wave whip on it currently.) What did the original antenna look like that it originally came with?

--I found the cell mod; looks easy. I also found in the same file a mod to up the number of channels from 300 to 400, and increase the scanning speed by adding two diodes. Do these latter two mods work well? If so, I wonder why the 2004 was made without these easy-to-add features.

--Does the set of front panel membrane switches hold up well? Must be close to impossible to replace a single set of defective contacts without replacing the whole thing, which must be now unavailable.

All in all, an excellent scanner for the mere $100 I paid for it. I also have a PRO-2005, and the older 2004 actually has better audio than the internal speaker of the 2005. (More bass; less tinny.)

Thanks in advance. --Leigh Marrin/KM6JE in Santa Barbara.

6143. AOR8200: What's the Fuss?

Newsgroup: rec.radio.scanner
Date: 1998-09-16 00:00:00 UTC
From: malexder@aol.com
Message-ID: <19980916134033.21125.00000340@ng92.aol.com>
Source record: 143892

Some people have been waiting for the arrival of the AOR8200 as though it were the Holy Grail of scanning. I'm not holding my breath, that's for sure.

I'm among the first people who'll buy almost any new scanner just because I'm a unrepentant button pusher, but after reading the product sheets, a couple of reviews and talking to people who really know their stuff, I wouldn't touch an AOR8200 for any reason. Given the choice, I would stick with my Yupiteru MVT-9000 for overall performance; and if I really wanted computer control, I would go with the AOR8000. Not only is the 8000 less money than the 8200, its overall performance is better too.

The 8200 is a dog of a scanner, especially for the money (between $500 and $600 in many places). It's noisy, susceptible to intermod distortion, and has poor VHF and HF performance compared to the 8000 and the Yupis (both the 7100 and 9000). That opinion belongs to a technician I know who has been putting the 8200 through its paces. Wells says the same thing in his review (www.strongsignals.com). He says in his review that the 8000 is "deaf under 25 MHz!" He also notes that: "Testing both radios for how well they were aligned once again showed the AR8000 was superior. On HF, both radios did very well. Up in the VHF-hi band, the AR8200 appeared off by about 450Hz while the AR8000 was about 250. Up at 450Mhz, the AR8200 was 1.3kHz off while the AR8000 showed 800Hz. Near 900MHz the AR8200 was off by nearly 4kHz!"

Looks like I'll wait until they iron the bugs out of this supposedly "new concept in scanning." Better yet, I'll wait and see if they drop the price on the 8000 so I can buy another one (sold the first)!

Has anyone heard of a "Sears 5 Band" progammable scanner, it uses some type of punch card that is inserted in the scanner. I has a manual called "Code Book" for setting up the frequencies, and has 16 channels. Looks like it is more than 15 years old. Michael

As far as I know the displays are no longer available.
Electroluminesence panels do have a rather finite lifespan. You will
still be able to read the display, but the backlight will be gone.

> --Mine is missing the antenna. (I'm using a 2 meter telescoping half-wave
> whip on it currently.) What did the original antenna look like that it
> originally came with?

These aren't the greatest antennas to use for monitoring. They work
well on the normaly VHF frequencies (136-174 & 30-54) but they are not
very good at all on anything else.

> --I found the cell mod; looks easy. I also found in the same file a mod
> to up the number of channels from 300 to 400, and increase the scanning
> speed by adding two diodes. Do these latter two mods work well? If so, I

This was done so that the next model would have the features enabled -
but would cost no more money to develop. As it turns out, nosy
hobbyists discovered these "hidden" upgrades.

> --Does the set of front panel membrane switches hold up well? Must be
> close to impossible to replace a single set of defective contacts without
> replacing the whole thing, which must be now unavailable.

They wear out eventually and, once again, I don't believe that
replacements are available.

> All in all, an excellent scanner for the mere $100 I paid for it. I also
> have a PRO-2005, and the older 2004 actually has better audio than the

That may be in large part due to the speaker itself. Scanners over the
years have had progressively poorer audio! 8-D

Enjoy your new acquisition.

: display itself going bad, as I suppose that's now unreplaceable, right?

It's not the LCD display:it's the backlight panel BEHIND the LCD display.
The panel is replaceable..BUT Tandy has been out of stock on them for
quite a while.

: --Mine is missing the antenna. (I'm using a 2 meter telescoping half-wave
: whip on it currently.) What did the original antenna look like that it
: originally came with?

Simple whip...Tandy probably still has this part.

: --I found the cell mod; looks easy. I also found in the same file a mod
: to up the number of channels from 300 to 400, and increase the scanning
: speed by adding two diodes. Do these latter two mods work well? If so, I
: wonder why the 2004 was made without these easy-to-add features.

The cell mod involves removing a diode.
The add 100 channel mod involves adding a diode(I think)

I forget exactly how the speed mod works-but I think only one diode is
involved.
To answer your questions:
1.yes, all 3 of the mods mentioned above are for real and do work.
2.As why Tandy did not make the unit with those functions enabled from the
factory-well, you know why the cell block was done(Tandy sells cell
phones, and they were afraid of a "sticky" situation)-it looks odd-"Tandy
sells cell phones, and they sell scanners capable of receiving them"!
So they blocked most of the 2004's(this was before the ECPA even existed)!
As for the channel and speed mods-who knows!
: --Does the set of front panel membrane switches hold up well? Must be
: close to impossible to replace a single set of defective contacts without
: replacing the whole thing, which must be now unavailable.

The membrane holds up reasonably well, assuming it has not been abused.
I don't know if they are still available.

: All in all, an excellent scanner for the mere $100 I paid for it.

$100.00 for a WORKING 2004(even with the dim backlight) is a good deal.

: I also have a PRO-2005, and the older 2004 actually has better audio
: than the internal speaker of the 2005. (More bass; less tinny.)

: Thanks in advance. --Leigh Marrin/KM6JE in Santa Barbara.

I am selling my 4 month old Alinco DJ-X10 wideband receiver. This scanner is in perfect condition and receives from 0.1mhz to 2000mhz. There are 1200 memory banks with alphanumeric tags for each individual freq. that is programmed. There are many features that you can check out at http://www.alinco.com.

The scanner comes complete with instruction manual, antenna, batter pack, battery charger, belt clip, and box. I am asking US$350-$375 or will consider trade for radar detector of around the same price.

If you are interested please e-mail me.

Don't know what country you are located but here in the US citizens band transmitters must be FCC type accepted. Many years ago some kits were offered by mail order firms but now even that's out. While it is possible to build a transmitter and receiver that would work on cb frequencies, why bother? Used CB's can be had for next to nothing at yard sales or second hand shops.

6161. BC3000 DC Power Cord

Date: 1998-09-16 00:00:00 UTC
From: abrock@annapolis.net
Message-ID: <36003bd7.0@news1.annapolis.net>
Source record: 143910

I made my own power cord to run my BC3000 in the car...
It runs from the back of the scanner directly to the cigarette lighter plug.
Will this hurt the scanner?

The AC power supply that comes with the BC3000 is a "trickle" type power
supply (450mA).

Will I be over-powering the radio with it direct to the lighter plug. Seems
to work okay...

I've seen an "official" BEARCAT power cord at SCANNER WORLD for around $12.
Just wondering if I need it.

If you want a real laugh. Try using the Q-7A Icom Transceiver as a scanner. It can be done if you are not in serious need of specific "scan banks" and can live with search ranges instead. Although for me as it turns out 2 banks is enough, subjectively, it blows away the sensitivity and selectivity of any scanner currently available including the Yupiteru 9000! I for one do admire the audio and performance of the Yupi's but for 2 hundred bucks you get a receiver that is of no compromise in performance and meets military specs, and what the Hell, if you are so inclined to get your Novice Ham License, you can even talk on it!

Does anyone know of any mods that can be done to this radio? It already has the built in 800-969 Continuous scanning feature. I'm looking to see if this can go maybe to the 10/11 meter band (26-32Mhz), or anywhere in that range? Also, does anyone know anything about the programming on this scanner? I have gotten the Private band programmed fine, but what I'm wondering is if/when you program the Fire, Police, Med, Air, etc. bands, is there a way to just have it scan those programmed freq's instead of the whole built in police ones? Please let me know. It'd also be appreciated if anyone can tell me where I can possibly get a copy of the book for this? Thanx.

--- Charles!

Did RS use a slightly smaller pin on the back of the 2006 to thwart folks "making their own" cigarette lighter adapter plugs?
I tried making my own, but find that it rarely makes good contact. Most of the time it won't work at all. I know the lighter plug has current and I have current all the way to the plug that goes to the scanner, yet the scanner won't function. Any suggestions, or can one still buy the cigarette lighter adapter unit from RS?

>forbids hams to possess equipment that can transmit outside of ham
>bands. Would you contend that a ham can't own a CB radio, a family
>service radio, licensed radios for other services, etc.?

I made no claim at all. I said nothing about the illegality of possession
of any transmitting equipment. This thread (and almost all of Part 97)
concerns the *act* of transmitting, and my comments were to make you
consider the definition of "amateur station" and what equipment would
be at the disposal of an "amateur station" (as defined by the FCC) in
carrying out that act.

I have a VHF-FM marine band transceiver in my shack. Is that part of
my "amateur station" (as defined by the FCC)? Absolutely not.
S97.403 mentions equipment at the disposal of an "amateur station."

I also have an HT designed for service between 150.000 and 159.995
MHz in my shack. Is that part of my "amateur station" (as defined by
the FCC)? Again, no. Therefore, it is not at the disposal of my
"amateur station."

>As far as I know, there is no prohibition, even on non-hams, of owning
>equipment capable of transmitting on any frequency, but there are
>restrictions on transmitting. (There are some restrictions
>on "external RF power amplifiers".) Perhaps you know of some such
>restrictions and can cite federal law or official FCC policy. I would.
>be interested in any such information.

Not sure what you're smoking but stop it. It's making you grossly
misinterpret my comments.

>>Q. Just what equipment would be at the disposal of an "amateur station"?

>A. Anything you own, or can borrow, build, modify, etc. at the time of
>the emergency. Disposal clearly means anything the operator can make
>use of at the time.

And here is where you are in error. Out-of-band transmitting equipment
is not included in the FCC's definition of "amateur station." Sure, it's
in your shack - you're free to possess it, but it's outside the realm of
"amateur station."

> another FCC-regulated service while providing emergency communications;

Ah yes, we do this every Armed Forces Day. Hams transmit on specific amateur frequencies, and listen on specified military frequencies; military stations listen to the frequencies the hams are transmitting on, and transmit on the military frequencies the hams are monitoring (sort of a "cross band" operation). Exchanges are made in this way. The military sends out very nice QSL cards! (Note that the military is not an FCC-regulated service.)

What S97.111(a)(2) allows us to do is transmit on an amateur freq'y, and listen to say, a police freq'y; the policy dispatcher would transmit and receive in just the opposite manner. Hence, we would "exchange messages with a station in another FCC-regulated service" without transmitting out-of-band.

You know, back in the days of the BBS, a couple of the systems (PCBoard for one) would display each user's information if you put something like (*HOMEPHONE*) in your message.

Of course, each user saw HIS OWN phone number, but almost every time you'd get at least a couple of outraged replies asking "How did you get my phone number?!?!?!?!" -- and the person would quote back the phone number, which you didn't have before, but they sent it to you!

> As for radar detectors being "burglar tools" thats taking things a bit far,
> don't you think?

You're not burgling anything, heh. It can even be argued that your intent is to use it to AVOID breaking the speed limit, because 99.999% of the cars that are stopped do not have detectors in them, and the vast majority of cars overall do not have them, yet they still catch speeders.

The thing is, if you get stopped, your insurance rates go up and you have to send your insurance company more money. If you don't get tickets, you send them a lesser amount of money, and they don't like you avoiding chances for them to raise your rates. It's not about safety at all. If the speed limit was 100, you'd have dorks going 100 mph or more. If it was 25 (on the same highway), you'd have dorks going 25 mph.

Need a portable setup. If you've got a R-10 and a Scout and want a new toy
or just hard currency, tell me. Unblocked models only please.
Willing to trade or just buy...

If you knock a hundred bucks off your price, you'll be more
in the ballpark. Radio Shack was closing them out at around
$120 and there are still some to be found at that price and
that's for a new scanner with warranty.

Cross-posted to: alt.radio.scanner,rec.radio.scanner

Lawndale uses LASO for police services. Try 483.4375 Dispatch, 486.4375
mobile and 482.8875 L-Tac. They use LA County Fire for fire servives.
Try 470.5375 Dispatch, 470.4375 Tactical, Response 470.5625.

Hope that helps ... Good luck

Mike

Heres some interesting Adelaide AUSTRALIA frequencies:

473.975 Some taxi chat channel. Same regular users.

486.200 Used by security firm checking car dealers yards.

464.925 MYER CENTRE management Adelaide

131.600 Police air-ground

486.475 Transit police/Transadelaide supervisors

486.400 Chubb security

463.450 Royal Adelaide Hospital security

487.925 " " " " porters type staff

473.800 Adelaide Impressions Chaueffered Cars

473.650 Channel 7 .....not much though

489.500 Channel 9 " " "

154.575 Coast Guard

146.850 Amateur Repeater

147.000 " " " "

126.325 air - ground.......adel-kingscote

129.500 qantas air-ground

130.650 ansett " "

473.150 Adelaide Airport Operations

486.500 SA FM.......funny

411.750/412.100 St John Ambulance cadets local communications. Used
at sport events, Royal Show etc etc etc

418.100 AN Train Control....north to Pt Pirie etc

418.475 " " "

418.675 " " "

488.925/483.725 Suburban Taxi Voice base/car

484.550 Qantas operations Adelaide (local simplex)

463.600 Ansett operations Adelaide (repeater)

464.950 Qantas International (repeater)

134.500 Adelaide Airport ATIS.....weather, runway use etc

473.550 West Lakes Mall (repeater)

469.700 Westfield Kilkenny/Marion

485.600 Parking Inspectors Adelaide

463.575
464.225 Charles Sturt Council

487.325/488.850 Main RAA voice channels

It's communicatiing digitally using a computer. The radio is hooked up to a TNC, or Terminal Node Controller. This small box converts analog signals to digital and visa-versa. Mainly used in Ham radio.

I went to this WEB page and the download has been removed. It said
something about nobody sending him any money. I think it has to do
with the $50 price tag and $15 shipping cost. I mean come on $65 for
a program I cant check out first. Who does he think he is Bill Gates?
;-) Has anybody tried this program? Is it worth the money?

Thanks,
Tom

>able to fix your radio!
>
> BP

just got my mr8100 back from
them...took three months to get
it back.

sent a check with order for prepayment
mail it back right after fix.

after awhile get a post card saying
delivery date would be Aug 8, 1998.

seems they sent the unit on July 28 and
no one around to pay the COD fee...
"COD FEE" you yell. Yes. They
sent it that way after I sent them
a check. Go Figure. wanted to
eliminate the COD hassles.

It was sent back. Called. They have
no record of a check. No check
cashed, so far.

Get this: I ask "when will I get it
sent me?"

This was on Aug 4, 1998. She says
it will go out on Sept. 15, 1998.

What?

Just turn it around and rehip. I say.

She says it has to be fixed first and it will
take that long to fix.

I tell her: "excuse me but it's been fixed".

She says: "i'll put you on hold"

six minutes she comes back...lucky I'm only
paying .10 per minute. from Calif.

she continues: "someone forgot to put a tag
on it to reship. A form has to be filled in
and i'll do it now"....etc.

I got the unit on Tues.

Three months.

They seem to lose things very easy at Uniden.

the fee: 49.95 flat rate for scanner...total
54.95 including shipment back.

where did you get this 80 buck rate?

bill conduit
etc.

Whoa Whoa!!! Jeez. I shoulda dropped ya guys an "Attaboy" for that program. I'm *very* interested in that application. I was all over your web page a couple of times checking out that slick interface. But I didn't have the right scanner *or* the interface.

I ended up discussing this with Bill Cheek and he set me up with a sweet deal on a well stored and little used Pro-2006. He personally checked these units out, (He's seriously into scanners, ya know; Prez of COMMtronics and World Scanner Report, authored three books on scanners and modifications, contributor to the "Monitoring Times", the guy knows what he's doing.)

The scanner arrived Tuesday and it's a joy to behold. I didn't think I was ever gonna get my paws on a decent one of these. Bill Cheek delivers. (It's playin' right now! Can y'all hear it?)

Which brings me to another point: Anyone know what a used Pro-2032 in great condition (bright backlight, with original box, and brand new "screw-in" telescoping antenna) is fetching? Pricewise that is? Seems I have one to unload.

Next is the interface. And If that software works as advertised, you got my fifty bucks. It's just gonna take me a while to get the interface together. But that's where I'm heading with this unit. When I get the hardware interface together, I'll be talking to y'all for the software. That's an attractive application you got there.

6223. Modify a Pro 64?

Newsgroup: rec.radio.scanner
Date: 1998-09-17 00:00:00 UTC
From: Anonomoose <nospam@gte.net>
Message-ID: <6tsl0m$70f$1@news-1.news.gte.net>

> measures to stay anonymous because with the ECPA this file might be
> rouge or something....!

Everything you need isn't there....The over-the-air rekey information is
encrypted by another key that is only used to encrypt keys for over-the-air
rekey. Unless you know the "shadow key" you won't be able to decrypt and
load the "traffic key."

If it wasn't secure you can be certain that nobody, much less Customs,
would have ever bought the product.

Fellow Radio People:

Will trade Standard C558A HT for Icom R-10 or AOR 8000. (unblocked ONLY.)

Standard C558A:
144-148mhz FM Transmit
438-444.999mhz FM Transmit
100-200mhz AM/FM Recieve
400-500mhz FM Recieve
800-900mhz FM Recieve
CTCSS, DTMF, 200 memories, dual vfo's, SMALL!

With rapid desktop charger, manual, 2 antennas, no box. In VGC,
I just lost interest in 2m/70cm.

Please do not contact me via email, this is not my account.

I can be reached at 414.423.9001

Nate.

I'm about to purchase a 98 Chevy Blazer 4Dr with front bucket seats. Any suggestions on how best to mount a couple mobile radios (2m ham, scanner, maybe a CB)...want them within reach, but not too visible to would-be radio thieves. Commercial brackets? Under dash? Facing up between seats? Or??

Thanks.

The only negatives I have with my UBC3000 are the Uniden battery pack vs just "AA"s and the absence of a seperate power port that just runs the radio without overcharging said battery pack (like the PRO- 26). What we are talking about here is a DC pwr cord running a fully charged battery pack from 12 volts. Will it overcharge the battery pack if the radio is on? Unlike the BC3000, the UBC3000 came with neither AC recharger nor DC cigar lighter pwr. cord. Jim

My best guess would be that the antenna on the train is directional
and is oriented to the front and rear of the train. Try getting
further away and up or down the track a ways. The radio shack
telescoping whip is a good antenna and much better than the rubber
duck that comes with portables. I usually just extend mine all
the way and don't bother trying to adjust it for different bands.
The portables that the train crews use just have the rubber ducks
so your antenna is better than what they're using. You might try
using a magnet mount mobile antenna. Radio shack is closing out their
20-012 at $9.97 which is a steal *if* you can find one.

6248. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.scanner
Date: 1998-09-17 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6tqcer$l7f@news.Hawaii.Edu>
Source record: 143845
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

| unrepentant button pusher, but after reading the product sheets, a couple of
| reviews and talking to people who really know their stuff, I wouldn't touch
| an AOR8200 for any reason. Given the choice, I would stick with my Yupiteru
| MVT-9000 for overall performance;

I'm in doubt too, trying to choose between MVT-9000 and AOR-8200. I own and
have owned a few other Yupiteru scanners and have been very pleased with them.

One reason to go for the AOR is because it implements the eight-and-a-third
kHz shift on the VHF aviation band. The MVT-9000 doesn't (of course, other
steps come close, but you'll be running off when searching the band).

What's wisdom here? Is there a successor of the MVT-9000 on the horizon?

Cross-posted to: rec.radio.scanner,alt.radio.scanner

re: the recent email from your vice president (below):
I would like to know, as an ar8000 owner who would be considering the purchase of an ar8200, how one can
see this 'quality improvement' process at work in the prior product, namely, the AR8000. I would like some
indication as to how this "improvement process" caused later manufactured product to be any better with regard to the following
symptoms:

1) lcd display window scratches very easily
2) markings quickly wear off the keypad, especially the bottom row/bottom half of key
3) hundreds of 'wandering birdies' that make the scanner stop on channels that actually don't have a signal present
4) holes for screws in side of case are so close to edge of plastic that a drop or two cracks the plastic
5) grey color of case quickly wears off to yield mixed black and grey color
6) after spinning the tuning dial 3 clicks in one direction, the scanner can still be back on the same frequency it started on
7) the famous 'sputtering squelch' problem
8) receiving pager signals where they are not, cell phone calls where public safety should be, and the whole
800mhz band repeated up in the 1500 mhz range

A company's honor is based on its actions more than its words, and I would like some information about Actions supports your Words!

thanks for listening
Sincerely,

Neal R. Fildes

**** EMAIL FROM YOUR VICE PRESIDENT: ****

from Takashi "Taka" Nakayama, Vice President of AOR USA, who wishes to clarify his posting on September 2:
Dear Rich,

I'd like to inform you about the US version of the AR8200 (AR8200B).

After I sent you an e-mail responding to yours, I have noticed that my comments seem to cause a misunderstanding among owners of the AR8200 in the UK. Therefore, I would like to correct my statement.

Due to my improper expression, some UK customers may feel that UK version of the AR8200 has poor design. Needless to say, it is not true. The point I

want to mention is that at AOR, we are continuing to improve our products day after day, and newer production of the AR8200 will be improved.

Since no perfect receiver exixts, we need to improve our products. That's why I mentioned that newer production will be improved.

I hope you'll understand the point and this will clarify the misunderstanding. If you have any questions, please let me know.

Thank you,
Taka Nakayama

6254. Descrambling Speech Inversion Schemes

Newsgroup: rec.radio.scanner
Date: 1998-09-17 00:00:00 UTC
From: ctpds49@aol.com
Message-ID: <19980917081705.10678.00000462@ng121.aol.com>
Source record: 143851

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

That is if you want the blocked version. You can get the overseas unblocked BC3000XLT new from Bandercom for $269 U.S. and from Javiation for $285 U.S. including shipping.

You do lose the Weather channel button, however.

If someone could provide me with the frequency for the
Prince Georges county Maryland Animal control (P.G. county)
I would appreciate it.

I lost my dog about 2 months ago, and I'd like to monitor it incase
there is any descriptions for a dog like mine.

We've contacted every place we could, and put up flyiers of course,
checked various dogs which weren't ours. note: if you find a lost dog,
and can't foster it a home, please make sure you turn over to a animal
control facility that has a no kill policy. There are usually a few
animal shelters in the area. Try www.spca.org.

I've searched the web, deja news, and my old file archives, but I
can't seem to find the frequency. If you have one of those frequency
databases, I would greatly appreciate your help.

I guess I will go to a bookstore or radioshack and look it up,
hopefully I can find that.

Thanks for your time/help!

Daniel.

Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have set up a web page containing many frequencies for the state of Iowa. This includes trunktracker id's for the trunked systems in Central Iowa, mostly in the Ames area. I'm continuously updating and changing this page and, as I get more information and time, will be putting more information on here. I have a good start, but I'm still in the process of adding frequencies for a wider area of Iowa. If you live in Iowa, this page is a must see.

Message-ID: <01bde251$ecfeecc0$6a4006d1@oemcomputer>
Source record: 143859

Hi Steve: the whip ant. on your scanner is a compromise ant. and is not
very efficient at the freq. range that you desire. an outside type ant.
with the proper freq. range is nessasary for what you want to do, such as a
RAD SHACK Discone type ant. with a rangge from say 28 MHz. to 1.3 GHz.
Also bear in mind that most of the signals you are intercepting have line
of sight propagation so the higher your ant. is the better you will receive
those signals. also type of feed line is important at freq. above 100 MHz.
signal loss per foot becomes greater as you increase in freq.
Railroad communication is generally directional, towards the front and
back of the train. hope this of some help.

6263. Re: Trunking in LA

Newsgroup: rec.radio.scanner
Date: 1998-09-17 00:00:00 UTC
From: corbin@physics.ucla.edu
Message-ID: <6trbj5lhr1@carroll.library.ucla.edu>
Source record: 143860

Richard Talley (talley@earthlink.net) wrote:
: I've been looking at various options for monitoring Trunked Systems in
: the LA area and wondering if it's worth the effort. It looks like the
: LAPD is still using conventional single chanel equipment. A web site
: which lists trunked sysems has LA County using an Ericcson system. Does
: anyone know if the Opto and Bearcat hardware will handle Ericcson???

LAPD is still using conventional repeaters, but their radios are
trunking capable. At one time, it was proposed to use conventional
repeaters for dispatching and a trunked system for other comms, but
it didn't/hasn't happened (there were some rather serious time
constraints for getting the 484MHz system on the air, and one
suspects that they just ran out of time to seriously examine the
trunking option).

LA City and LA County both run Ericcson trunks up in the 866-869
range for non-public safety operations. The current crop of Bearcat/RS
scanners will not do Ericcson, and I'm rather certain that Opto won't
either. There are some PC-based systems that do Ericcson (eg. Trunker)
but I think that's it.

The Bearcat/RS scanners only do trunk tracking in the 800 MHz
range, and they only handle Motorola trunks. In my part of LA,
much to my suprise - there aren't that many trunked systems to
listen to! UCLA has one (relatively short range), Getty Center,
Caltrans (just out of range for me, but I occasionally catch it's
data signal), Anheuser Busch (they DES everything), and a system
located in Sherman Oaks that never has any traffic on it - that's
about all I'm really aware of, directly (Signal Hill apparently
has an 800Mhz trunk, but I can't hear it out here). There are
some significant systems at 900MHZ (eg. LADWP) - but the BC/RS
scanners won't track 'em. If LAPD adopts some form of trunking
at 484MHZ, they won't track them either...

Opto will do Motorola (and Johnson?) in any band, as it relies
on handshake signals rather than the trunk controller. It can
scan several trunked systems at a time, and even mix trunked and
conventional scanning. There is one *minor* bugaboo - sort of
an ambiguity in TG decoding that the Opto system is vunerable to,
but you'll never see it on the vast majority of systems out there.

AFAIK, there are PC-based solutions for Moto and Ericcson (not Johnson?).
These require you to buy/build a small "data-slicer" circuit (<$5), and
tap the discriminator of your radio. There should be some way of
controlling the tuning of your radio by PC as well - either a real
data-port, or something you home-brew yourself.

Is it worth it? A TT'er can be had relatively cheap - ~<$200. You might not have much to use it on in LA, but if you drive to San Bernardino County or San Diego, or Orange County you'll have lots to listen to. The PC-based solutions aren't too expensive, provided you have or have access to the expertise to install them. To listen to LA City and County trunked systems, the PC-based systems are currently your only option...

Hope that helps...

6264. Re: PRO-2004 Questions

Newsgroup: rec.radio.scanner

Source record: 143861

A public thanks to Marc and Bud for their informative responses.

Bud (thekat@san.rr.org) wrote:
: Good price! Any more where that one came from? :)

Sorry, no more $100 PRO-2004s left.. just happened to run into a guy who'd bought a 1000 channel Radio Shack scanner, and wanted to let his old PRO-2004 go cheaply.

About a year ago, I came close to buying another 2004 for $125 plus tax from a local pawn shop, but I'm glad I waited. The pawn shop 2004 had small little rubber bumpers GLUED to the membrane switchpad, and they looked like hell. I considered buying it, but probably would have trashed the membrane switches removing those ugly little bumpers.

6265. Can a handheld serve as a base also?

Newsgroup: rec.radio.scanner
Date: 1998-09-17 00:00:00 UTC
From: mecaswell@aol.com
Message-ID: <19980917130801.28335.00001183@ng66.aol.com>
Source record: 143862

I'd probably going to buy a Pro-90 next time they go on sale. I realize that these handhelds are designed primarily for scanning on the move, but can they also effectively serve as a base scanner if an external antenna is added?

If it WON'T work well, I may just buy a Pro 2050 now (while they're on sale) and possibly pick up a handheld later.

Mike,

You can use a handheld unit as a base station with an external antenna.
However, you should keep in mind that the performance will not be quite
as good as a base station unit. This is primarily due to the
selectivity of the unit(s).

If you are in a rural area, or any other place with minimal RF traffic
the performance could be quite adequate. I believe that Radio Shack has
a good return policy.

I've also read that the Pro 2050 is basically just a Pro 90 handheld placed in a base scanner enclosure. With that in mind, would there be any advantage to getting the 2050 (aside from ergonomics)?

>However, you should keep in mind that the performance will not be quite
>as good as a base station unit.

Also keep in mind that the equivalent base units generally have a few added features--perhaps a rotary knob, CTCSS or others. Using a handheld is kind of a pain--LCD and buttons are small, the scanner is invariably at an awkward angle or worse, falls over, if you don't have some kind of stand for it and so on. Unless you absolutely need a handheld, go with the base unit. Better yet, get both, which what you'll probably wind up doing.

OK, Ive tried to sell one of my BC3000xlt 400 channel scanners and haven't had a bite. Too high a price? (240 used or 300 new!!!) can't be! they sell at a discount for at least $329 plus shipping (or tax if not mail order), so my prices seem very fair.

Lets go this route people.....BC3000XLT 400 channel scanner used one year has everything with it (battery, charger, ant, manual, belt clip) - MAKE ME AN OFFER ON THIS!!!! I'll consider fair offers. MAKE ME AN OFFER!

OR, how bout a brand new one of the above, NEVER used???? MAKE ME AN OFFER!!! I'm not going to tell you a price, let's see if I can get some FAIR offers (bites) on this one! MAKE ME AN OFFER!

The mods are easy and do work. It could have been that a later model
of the 2004 would have offered the extra memories and faster scanning
in the same form-factor but in the meantime, GRE redesigned a smaller
version of it using more surface mount technology...called the
PRO-2005.

>--Does the set of front panel membrane switches hold up well? Must be

For the mostpart, membrane keypads work well under normal
circumstances however they don't holdup well to being poked with
pencils or other sharp objects. Indeed, you would replace the
complete keypad if one of the keys became problematic.
However, as with the LCD display, most parts for the 2004 are
no longer available.

>All in all, an excellent scanner for the mere $100 I paid for it. I also

In my humble opinion, LOL, I would say that the only true portable that would obviously outperform the handheld scanner-shortwave radios today would be something of the level of the Sony ICF-2010. It's synchronous selectable sideband would allow superior rough condition listening. Otherwise I don't feel the differences are all that marked.

6288. Re: Trunking in LA

From: Harry Marnell <marnells@snowcrest.net>
Message-ID: <6tv668$gb9@news.snowcrest.net>
Source record: 143685

LAPD's "Astro" radios aren't trunking-capable, but they ARE digital-capable, and digital is used for some specialized operations/divisions. Cmdr. Keith Bushey was one of the "prime movers" with APCO back in the 1980s to get TV channel 16 opened up to public safety radio users in the LA area...nearly every law agency in the county is now on UHF, and today's radios can easily cover the range from 453 - 512 MHz. (When I started with LAPD in 1968, the VHF radios had trouble receiving freqs as widely spaced as Tac 2...154.77 and Dispatch "E" ...158.865, so they had to use so-called "dual-front-end" [DFE] radios!) Wouldn't make sense to go off to a trunked system now, with all the existing mutual aid capabilities on conventional UHF.

Brian Humphrey, LAFD PIO, tells me they expect LAFD to be required to go DIGITAL - but NOT trunked - within 10 years; mainly, I presume, as freq spacing gets cut to 6.25 from the current 12.5 khz with most analog systems.

Some trunk systems are using a very small bandwidth so their audio
would sound much lower than on conventional systems. This has been
written about somewhat in some of the newsgroups. And with the
implementation of APCO25, I believe the bandwidth is supposed to be
smaller.

Source record: 143731

Hi!

I am a newbie to scanners. I just bought one at a ham-radio store, and an outside antenna to go with it. The antenna is a Channel Master Monitenna. Instructions said I should use regular RG6 cable with it. But the antenna is
going to be located about 150 feet away from the scanner, and the dealer said I should go with something called 9913. Its very expensive. He also said I would need a balun, whatever that is.

Should I use 9913? I can afford it, but is it worth it? What kind of balun and connectors do I need? Also, are there any good amplifiers on the market that cover the whole range from 40-950? I am in the boonies about 40 miles from 2 large cities (opposite directions) and I would like to be able to pick up signals from them.
(This dealer is new to me, and I'm not sure if he is just trying to get more money out of me. He also told me about this newsgroup, and another one.)

Finally, how do I go about grounding the antenna? Just 2 weeks ago we had a severe thunderstorm, and lightning struck and destroyed a tree in my front yard, only a short distance from where the antenna is going to be put.

Thank you very much. You can respond here, or e-mail me directly.
I appreciate your suggestions and help!!!

> replacing the whole thing, which must be now unavailable.
>
>
> Let me pass on something I had occur on my 2004 keypad-something fell
against the face of the scanner, denting in one of the sections of the
keypad membrane - my 2004 locked up - one of the switches beneath the
membrane was being held down by the membrane surface, which 'stayed in'
when I depressed it, holding the switch depressed. No other key would
operate while this one stayed depressed, and after pondering it for a
while, what I had to do to correct it was:
> cut around the edge of the stuck key's outline with an exacto knife, on
THREE sides of the square, to create a flap which could be swung out
> 'un-dent' the membrane surface (the convex surface had become concave,
holding the switch down) with my finger
> lay the membrane 'flap' back down over the switch and carefully glue it
back down (I used crazy glue)
>>> It worked fine and I had no more problems with it - been using it since
I bought it new in the mid-eighties. Just thought this might help someone
along the way if it happens to them.

Well as far as i can see there is only one fair way to settle this. Since the
package was not insured (which it should be) but it was delivered I would say
split the loss. Each one of you share the loss. In the future use UPS as you
automaticly get $100 insurance and the additional insurance is a lot cheaper
than snail mail. I have had UPS leave packages when no one was home but one
time it was misplaced and they paid the insurance no questions asked.

>Yupiteru 7100, 9000 for shortwave receiving?

Yes. You can do a lot with scanners like the AOR 8000 and the like,
but they are no match for most inexpensive portable shortwave
receivers (such as the ATS909 or the Grundig YB 400).

The reason: Scanners are optimized for wide bandwidth and sensitivity.
Inter-Modulation Distortion (IMD), selectivity, and dynamic range are
secondary. This is exactly the opposite of a shortwave receiver,
where signals (and noise) are usually stronger and it is more
important to have good selectivity and dynamic range.

It is possible to make a single box which does it all. However, given
the current state of the art, you might not like the price tag.

Hi Brent, Thanks for your comprehensive and most useful discussion on the state of trunk listening in LA. Since I live it Torrance your analysis confirms my believe that it's best to wait until LAPD goes to trunking.

I can do without hearing the LA Arboretum order another bag of fertilizer.

You mentioned Johnson Systems vis-a-vis the Optotronics systems with a "?". I think that when Optoelectronics mentions LTR, that's the Johnson system.

Regards
Richard

On September 17 1998, you wrote:

Hello

61 flights in 59 minutes
From 0202 to 0301 UTC
Listening to only 3 frequencies: 5616, 5598 and 6628 KHz
Excellent signals

This give aprox 1 flight/minute and a very very busy airspace:
have a look at the following Screen Shot done with AirNav and you
will have a complete "Radar View" of the North Atlantic airspace at that
time:

http://www.geocities.com/SiliconValley/Lakes/9420/shotex7.gif

Really hope you enjoy the log.

Best regards, Andre Brandao

I use my BC3000xlt with computer speakers and a Diamond discone antenna and
it's great. The audio is very good. If I want to take it with me, no problem.

Go to my web page (see my .sig for the URL) and then go to the New York page. I've got the frequencies for the DOITT system as well as trunktracker information.

I have set up a web page containing many frequencies for the state of Iowa. This includes trunktracker id's for the trunked systems in Central Iowa, mostly in the Ames area. I'm continuously updating and changing this page and, as I get more information and time, will be putting more information on here. I have a good start, but I'm still in

the process of adding frequencies for a wider area of Iowa. If you live

in Iowa, this page is a must see.

>cpu and that is about all you can do with it

I paid $149.00 for my interface. I bought the "kit form" because I
like the challange of building my own electronics. My DOS program
works just fine in a window using windows95. And I can multitask other
programs just fine on my cheap old 486/66.

> Bill Gates? No we don't think we are him, but with the time

>nothing. You could download it and run it all you wanted
>nothing on it was disabled it everything was 100% functional and no
>one would tell us anything so down it came.

The Bill Gates comment was intended to be a joke. The product has
only been available for three months and you are complaining it has
not taken off yet? Wow, I know of many businesses that wait years for
a return on their investments. Get rich quick ideas don't generally
work. PS: 200 downloads is not a lot! dont forget this is the
internet. There are millions and millions of people who read this
stuff. I can't tell you what I think about the program if the
download page you advertise is removed and I can't evaluate the
program. I support shareware. I have found many programs on the
internet that are wonderful must have applications. When I find one I
like I send the registration fee to the author. On the other hand I

have seen advertised programs that are supposed to be the best thing since sliced toast and they suck. I like to be the one who decides if I like something. I never rely on someone telling me I'm going to like something.

>
> People have had all kinds of time to download and evaluate the
>program and not have to pay any shipping costs and yet no one cared.
>THis $50 program makes a $300 interface usable again.

I don't have the oportunity you speak of. My $300 ($149) interface never lost it's usability.

> I can tell you that I only used the dos program to program my
>scanner and that was it, with this program it runs almost all the

I don't believe that you have read the manual but I will tell you if
you press the lookup button and check the "only show comments when
using APF File" your problem will go away. So it is not a bug but an
overlooked function. Now it could be that you do not have this
setting, depending on what version of the program you have.
If this is the only problem you have with it and you register
the program you will get the latest version along with your
registration code.

As you can tell from the e-mail I sent you that yes this
program does work as stated. After more than 200 downloads and the
only comment we have seen about is that when using the apf file as a
lookup file you have to delete the comma's and stuff form it. The
problem there is that he never read the manual and when setting up for
the look-up file there is a check box to ignore all that stuff and
show only the comments and that persons problem is gone.
Me, I have a lookup file that only has freqs and comments in
it and has all my listings in it so that this way no matter what bank
I am in or what freqs are programmed into the scanner they are in my
one lookup file so that they will always be found.
When ready send me some mail.
Len

Jim;

I never thought about that. Thank you. I will try and do that, and see just how much patience I can have! :) And yes, it is like the 350. It's basically the exact same radio, 20 channels each band, except this has the built in 800Mhz capabilities. By chance, do you have any of the mods for the 350?

I am glad you did yours for the $149 in kit form, my was done
from scratch form for $60 Canadian. I believe that the working
interface was around the $300 mark and installed in your scanner it
was a little higher, I don't have the info handy to check it out and
with the @&$(*@@&*&@*&#*(@ on here that caused Bills site to go down I
could not get the info from there.
I know your system will still multitask but look at your CPU
usage, it will be 100% and your system will be real slow in responding
to anything.

Yes you are right 200 downloads is not allot but that is about 10% of
the approx. 2000 interfaces out there, so we should have at least
gotten a 10% response either in e-mail about how the program worked
good, bad or otherwise or registrations. We got shit.

Here is what we did get so far
a) Cannot get it to work (No response to our replies to him.)
b) Like the program will send the money immediately (That was 2
months ago.)
c) Cannot test it because it times out. (It's a demo.)
d) Would like to test it, do you have a demo. (Sent it off to him.)
e) Can I have another free program, I lost mine when my drive burned.
(Check your house insurance for
coverage.)

Does anyone happen to have freqs for the Washington State Criminal Justice Training Center (aka police academy) located in Normandy Park? Some of their cars have VHF-high antennas, but months of on-off listening to ALL the licensed washington state vhf-high and low freqs have provided nothing. Likewise with business bands. Someone said they may have BEEN using borrowed 800 simplex radios, but could not give any freqs. Can anyone help???
Thanks in advance,
Brett

Brother did you get your chain yanked big time! Now, you're a laughingstock! Why didn't you do what I suggested in the first place. Go into your newsreader and take out this newgroup. You put it in there, you must be able to figure out how to remove it. But don't keep sending unsubscribe and nonsense to the newsgroup--it ain't going to work--and it marks you as a complete amateur!

My 895 has worked fine from day one, unlike some others who have posted here.
A few things to try:

First, make sure the frequencies you enter are for a Motorola system.

Second, make sure they all belong to the same system.

Third, make sure you enter them from the truntracking mode - not from
conventional scan mode.

If that doesn't help, it just might be broken after all!!

Someone answered a query last week saying that RS is coming out with a scanner that will do Ericcson this fall.

Somewhere else I read (was it you) that to do Ericcson you need a slicer and a discriminator tap. I'm not sure what that entails. I guess I also heard that OptoTrakker also requires a discriminator tap.

Anyway, maybe it's moot for me until LAPD stops using its single channel plus repeater per "fleet".

NOt that I listen to LAPD all that much. More interesting are the TV stations sending their choppers and newsmen around making our news. What a cynical bunch.

Chopper: I'm out here at Thousand Oaks and there's no sign of a brushfire.

Now on Sept. 18, 1998 I get my bank
statements and what do I spy: right.
The check they claimed did not arrive
with the unit when I sent it in for
repair end of June, 1998, was cashed.

They did not have a record of it and
so they demanded I use my credit card
for payment seeing as how their mistake
for sending it back COD was not wanted.

go figure: now they have two amounts
for which only one segment was completed
upon it.

UNIDEN is not very efficient. beware.

are you sure you programmed it right?

sounds like you forgot to do the
frequency storage on the
trunk mode?

or the NYC is not Motorolla radio

if you don't see codes that is
a signal: the proper putting
in of the freq's in trunk mode
was never done or:

they use Ericsson radio

or : you don't have the control
freq in there...that sets up the
working of the unit.

bill conduit
etc.

I agree with Jeff -- a solid value overall (at the sale price). Good audio, great display and backlight, and fast scanning speed (~60 cps). I think RS decided to concentrate on trunktracking radios, so this and th PRO-64 had a short shelf life in the stores.

Allen

Well finally someone is going to talk about this program. 2
or 3 months of posting it here and no one has said anything about it,
just download it as soon as a new version comes out. We have had one
person ask about sending in the registration but that wa a month ago
and nothing has showen up yet.
$50 is not allot of money for a program that will run under
windows and let you still use your computer, I am running a P100 and
doing a search and store at the same time and am running about 25% on
the CPU usage, try that with the DOS version. What did you pay for
your interface in the first place $300? And you really need a second
computer to use the thing because under windows it uses 100% of the
cpu and that is about all you can do with it
Bill Gates? No we don't think we are him, but with the time
and money we have invested in this program and no one sends e-mail
thanking us for it or telling us it sucks or is great or even talk
about it in the newsgroups? We figure why waste our time giving it
away and not even getting thanked or anything. Hell since it has been
available on the net here we have had 3 major changes to it and still
nothing. You could download it and run it all you wanted
nothing on it was disabled it everything was 100% functional and no
one would tell us anything so down it came.

People have had all kinds of time to download and evaluate the
program and not have to pay any shipping costs and yet no one cared.
THis $50 program makes a $300 interface usable again.
I can tell you that I only used the dos program to program my
scanner and that was it, with this program it runs almost all the
time.
Do you like the what the DOS program does? If so this program
doe sit all and more, A?D conversion built in so now you can have a
signal strength meter and center tune meter, audio recording to your
harddirve so you don't need a couple hundred dollar Vader card.

I don't know what else I can say to me it would be worth every
penny of $50 hell I would pay $100 for it to get a $300 interface that
just sits doing nothing.

Hello all.
Just to inform you all on what's going on.
REcently (Last Friday), St. Catharines Fire Department switched to
155.445 for primary dispatch (the city ONLY)
In regards to the Niagara Voice Radio Project:
Two systems are on the floor:
1. a 900MHz Fully Digital w/encryption trunking system to be
implemented for Police, Fire, Ambulance (mabye) and REgional Works.
2. a 900MHz ANALOG system with selective encryption for above users.

It looks like number 2 is the choice, as it is about half the price.
(And won't piss off as many people :-)

More when it happens..
MIke

I have for sale (1) Bearcat 760XLT 100 ch. scanner
w/ the CTCSS/PL board installed. Included is the AC
adapter and a BNC telescopic antenna. Book avail too.
No box. Works great. Not mint condition, but works
fine and looks good. Not modified for cell, but probably
capable (never looked into it). Will let go for $165 shipped
via USPS only. Price is firm, reply if interested, I don't
read newsgroup regularly.

Yes it can! After I'd sold my BC3000XLT and purchased a BC895XLT base our electricity went out. Spent the next 3 hours looking at my new base and wondering what was going on. I learned a lesson though!! 1st scanner always a handheld, 2nd scanner a base!

6363. RE: help: I need a scanner frequency

Newsgroup: rec.radio.scanner
Date: 1998-09-18 00:00:00 UTC
From: itm123@usa.net
Message-ID: <6tt0v3kvb1@news-2.news.gte.net>
Source record: 143822

I went to the library and to radio shack. The library had no scanner frequency references and the radio shack frequency reference had basicly police/ems frequencies, but no animal control frequencies. So if you can find that frequency, I'll greatly appreciate it. I know it's a long shot, but it's worth a try to listen.

Thanks

Daniel

I wrote yesterday:

If someone could provide me with the frequency for the
Prince Georges county Maryland Animal control (P.G. county)
I would appreciate it.

I lost my dog about 2 months ago, and I'd like to monitor it incase there is any descriptions for a dog like mine.

We've contacted every place we could, and put up flyiers of course, checked various dogs which weren't ours. note: if you find a lost dog, and can't foster it a home, please make sure you turn over to a animal control facility that has a no kill policy. There are usually a few animal shelters in the area. Try www.spca.org.

I've searched the web, deja news, and my old file archives, but I can't seem to find the frequency. If you have one of those frequency databases, I would greatly appreciate your help.

I guess I will go to a bookstore or radioshack and look it up, hopefully I can find that.

Thanks for your time/help!

Daniel.

There is no best scanner yet, each one has friend and foe. You should specify what you want, what you can afford, etc.

Prices range from some $50 for used handhelds up to several hundred$ top-of-the-line scanners like Yupiteru MVT-9000, AOR AR-8200, Icom IC-R10 and Alinco DJ-X10.

As with the price, there is wide variety in features, options, bells, whistles, need-to-haves, nice-to-haves, better-not-to-haves and better-leave-outs (like cell blocks).

Good luck, and take a look at http://www.strongsignals.net/, Rich Wells' highly appreciated scanner site, packed with tips and reviews of lots and lots of scanners.

Good luck!

Aad

>unreplaceable, right?

Sounds like the EL panel is shot. RS no longer stocks replacements.
The LCD is not the problem. You may be able to buy an oversized EL
panel and trim it to fit. I hear it's a bit of a PITA to replace.

>Mine is missing the antenna. (I'm using a 2 meter telescoping
>half-wave whip on it currently.) What did the original antenna look
>like that it originally came with?

I got mine used and it had a telescoping whip with a right angle
BNC connector. Not sure if it comes with a second antenna.

>I found the cell mod; looks easy. I also found in the same file a
>mod to up the number of channels from 300 to 400, and increase the
>scanning speed by adding two diodes. Do these latter two mods work
>well? If so, I wonder why the 2004 was made without these
>easy-to-add features.

All the mods work fine. The stock performance of the radio matches
the specs that RS supplied. RS didn't want to offer the equivalent
of a 2005 at that time.

>Does the set of front panel membrane switches hold up well? Must be
>close to impossible to replace a single set of defective contacts
>without replacing the whole thing, which must be now unavailable.

I think it'll hold up OK, but take care of it since 2004 parts
are generally unavailable. If the keypad wears out, you'll still
have the option of hooking up an external keypad or controlling
it with a PC.

>All in all, an excellent scanner for the mere $100 I paid for it. I
>also have a PRO-2005, and the older 2004 actually has better audio
>than the internal speaker of the 2005. (More bass; less tinny.)

Yes, I remember mine having good audio.

6370. Updated! Pro-Turbo New Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1998-09-19 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <3606ebe1.25079262@news.iaw.on.ca>
Source record: 143629

Web site for downloading back up!

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes 2 groups of 4 user definable meters! Now you can
have that center tune meter that you have always wanted.

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.

You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to have a look, you can get more information
on the program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

Putting ANY microprocessor that runs on harmonically rich square waves near
ANY receiver isn't a 'good thing'. Ultimately, for absolute lowest noise
floor, we wouldn't have any of these processors near the vicinity of a
receiver at all. Since the introduction of the processor into the receiver
its been an ongoing battle against phase noise in relation to the receiver.
Especially in concert with very weak signals.

Cheers,
Gary

From: n0jio@delphi.com
Message-ID: <6u14uv$90t@lotho.delphi.com>
Source record: 143633

Hi, I have another pro-64 question for you. I notice that the power supply that I bought to charge the battery pack for this scanner has a jack on it which also fits the scanner as well as the jack on the recharger box. Is it just possible that the radio could be powered by this supply as well as the charger pack? If not, why not?
also, just how long can that scanner, or scanners from the Shack in general hold frequencies while the batteries are out of it? I ask, because as far as I know, the rechargeable battery pack must be taken out of the radio to be charged and so I was wondering if I need to keep the other pack filled with batteries for when I charge the pack or what?
sorry to bother you with this, but since I'm unable to read the instruction book, I don't know how to find out easily.
thanks,

BILL K.

Is it possible to make a discriminator output mod in an ICOM R-10
receiver?

I found some information about a discriminator output mod in an
ICOM R-1:

"SCANNER DISCRIMINATOR CHIP PINS OF INTEREST
CKT RF-in SCAN AUDIO
SCANNER NFM CHIP TYPE SYMBOL Pin Pin BASEBAND
Icom R-1 NFM TK-10487 DET-A IC-1 20 Q1 11
Icom R-1 WFM TA-7787AF DET-B IC-1 16 7 9 "

I'm not sure these mods are applicable in the R-10. Does Anyone have some
experience with that?

Thanks to the many of you who have written regarding the Los Angeles Fire Department's stance in regards to the Amateur Radio Community.

Khalil Ladjevardi wrote...

> On Sept 16, 1998, at approx 4:30 pm PDT, I returned to my home to find my
> amateur radio antennas brutally vandalized and destroyed. Pieces of my

> (Khalil Ladjevardi)

I know Khalil and he is a very nice man. There can be no doubt WHATSOEVER as to his dedication to the community at large and to the men and women of

public safety in particular. Please let me make that perfectly clear.

The situation that Mr Ladjevardi finds himself in is certainly unfortunate. At this time, his course of contact and complaint is specifically with his Homeowner's Association, and if he feels wronged (directly or indirectly) by a City Employee - the City Attorney's Office. I have offered him contacts for the latter, and frankly do not know the status of his inquiry or negotiations.

Khalil specifically wrote...

> The Los Angeles City Fire Department has now officially gone on record with
> the position that amateur radio operators and their antennas are a direct
> hazard to public safety.

It is clear that Khalil is incensed that his property suffered damage. I certainly have no quarrel with that. None of us stand for having our hard-earned goods damaged or destroyed. I think it important however, for the reader to review Khalil's statement:

>....I discovered that the members of my homeowners
> association in conjunction with the management company willfully committed
> this act.

I offer this only to the many of you who somehow surmised that the Fire Department had gone and torn down the antennas. That is NOT the case, nor does Khalil infer it to be.

Khalil is a calm and logical person, so it is apparent (to me at least) that this situation has aggravated him immensely.

Please let me return to another statement:

> The Vice-President of the my homeowners' association told me "
> The Homeowners' group was acting on direct orders of Los Angeles City Fire
> Department (LAFD) Capt. Randall Judd, and Fireman Charles R. Palacios (
> both are at Fire Station 092) who told them that it was in the public
> interest to commit acts of vandalism against amateur radio operators by
> destroying their antennas".

Please note that this is a quoted statement (and possibly the opinion of) the VICE PRESIDENT OF HIS HOMEOWNER'S ASSOCIATION [emphasis added]. I know of
no such statement by any of our members. The Vice-President of his HOA does not speak for the LAFD!!

Most distressing however, is (Khalil's understandable opinion), which many of you took as "fact" or even "current LAFD policy". See below.

Khalil wrote...

> The Los Angeles City Fire Department has now officially gone on record with

> the position that amateur radio operators and their antennas are a direct
> hazard to public safety.

I'll let that statement speak for itself. With no disrespect for Khalil, I feel that members of the Amateur Radio Community are astute enough to determine whether or not we have categorically and "officially" declared (and I quote his quote):

>amateur radio operators and their antennas are a direct hazard to public safety

Anyone who knows the LAFD knows that we would never and have never made such a blanket declaration.

The whole story has yet to be written, and again, the principal players in this scenario are his Homeowner's Association and the City Attorney's office.

Though I do not think that Khalil meant any harm to our reputation. I am saddened that our agency's official view of the Amateur Radio Community has been somewhat besmirched by those who may have mis-interpreted his statement(s).

I wish Khalil the best in his dealings with his HOA and the City Attorney's Office. I am also hopeful and indeed comforted in knowing that he can turn to his many friends in the Amateur Radio Community for support (legal and otherwise) as he confronts:

- His Homeowner's Association
- The City Attorney's Officer

I offer this reply not in an antagonistic manner, but only in the course of my duties, which is to defend the acts and image of the men and women who regularly place the needs and often lives of others ahead of their own.

Very Truly Yours,

Brian Humphrey
Firefighter/Paramedic
Public Information Officer
Los Angeles Fire Department

PS: My e-mailbox is already overflowing with mail on this matter, and I cannot possibly offer a personal reply to all.

All I can say is that you better have a few ham repeaters programed into your portable radio or base station raedy to be used before you even think of transmitting on the police frequency.

Sony the one and only.
I have had a ICF-2010 for ten years. It has been a great radio. They cost the same now as they did then. IMHO Only a $500 - $1000 SW tabletop would be any better. Drake and Lowe make some good ones.
On the Scanner side I have three. A old AOR 2002 , RS 2022 and the Bearcat SC 150.
Buy seperate radios and put up a good antenna for each one. Then you have the best of both worlds.

Sony 2010 $350 portable but not that small.
Drake SW8 $500 has a handle but not truely portable. bigger than the 2010

Radio Netherlands has some good SW reviews. Receiver Shopping List-
http://www.rnw.nl/realradio/index.html

There are many good scanners priced from $150 to $300

Good luck

>volts. Will it overcharge the battery pack if the radio is on? Unlike the
>BC3000, the UBC3000 came with neither AC recharger nor DC cigar lighter pwr.
>cord. Jim

I don't like the fact that when the battery pack dies... you have to
replace the battery pack with a new (or rebuild) one before you can run the
radio again. Once the batteries die, you can not run the radio off regular ac
power anymore, until you replace the dead battery pack.

Maybe Uniden will fix this with the new TRUNKTRACKING 3000 (hahah).

Other than that, radio still kicks ass.

Thanks guys (great explanation Jake). I thought this might be the
case. Rich I have read just about every one of your scanner reviews,
but forgot you mentioned the Sangean in some of your reviews....
Back to Strong Signals for some more intense reading....

I wanted to be able to get decent shortwave reception, and also get a
scanner. Instead of trying (or maybe hoping!) to find a do it
all radio I think the best thing for me now is to get both.
I think for now I will get the Sangean ATS 909 and either a
BC235xlt or Sony ICF-SC1PC (because it comes with a complete
computer control package). After improvements are made, I get
some good experience, and more results are in, maybe move to an
AOR 8200 or Trident TRX-100XLT (if it proves to be worthwhile), to
replace the Sony scanner.

Dan remove the "xxspam" if replying by email

In article <MPG.106bac8a596f83579896a0@news.naplesfl.net>,
xxspamdrimar@mediaone.net says...
> Will a decent portable short wave receiver (considering a Sangean
> ATS 909) give me better performance than a AOR 8000, 8200 or a
> Yupiteru 7100, 9000 for shortwave receiving?

Both my PRO-2006 and ICOM R8500 have 12V power connections. During
hurricane Andrew I was able to use my PRO-2006 for 2 days powered
off of a 12V gel-cell I had bought for my camcorder light. I can also use a
110V AC power inverter (normally used for my telescope) with the same
gel-cell to power AC equipment. The key is to have at least some other
power source available.

6403. RS Mobile TT

Newsgroup: rec.radio.scanner
Date: 1998-09-19 00:00:00 UTC
From: kegan30317@aol.com
Message-ID: <19980918235416.18603.00000397@ng52.aol.com>
Source record: 143705

The new TT Mobile is to be available from Radio Shack end of October. Has anyone seen a review anywhere? i.e. Monitoring Times, etc?
Character is doing the right thing while no one is looking

6404. FS: PRO-2004 $225

Newsgroup: rec.radio.scanner

FS: Bearcat BC760XLT w/ PL option installed.
Works fine. Not modified, may be able to. Comes
with book, antenna, & AC adapter. Radio Shack
DC adapters work fine too. Shipped to your door
via USPS for $160. Email reply if interested.

Harry Marnell (marnells@snowcrest.net) wrote:
: LAPD's "Astro" radios aren't trunking-capable, but they ARE digital-capable,
: and digital is used for some specialized operations/divisions. Cmdr. Keith
: Bushey was one of the "prime movers" with APCO back in the 1980s to get TV
: channel 16 opened up to public safety radio users in the LA area...nearly
: every law agency in the county is now on UHF, and today's radios can easily
: cover the range from 453 - 512 MHz. (When I started with LAPD in 1968, the
: VHF radios had trouble receiving freqs as widely spaced as Tac 2...154.77
: and Dispatch "E" ...158.865, so they had to use so-called "dual-front-end"
: [DFE] radios!) Wouldn't make sense to go off to a trunked system now, with
: all the existing mutual aid capabilities on conventional UHF.

I'll admit immediately that I don't have any first-hand information to
confirm this, but most of what I've heard seems to indicate that the
Astro HT's and mobiles will do trunking, if there's a trunked system
to put them on. The information that LAPD had kicked around a trunking
scheme for their non-dispatch channels was also second-hand, but from
credible sources, and supports (albeit weakly) the suggestion of trunking
ability in the Astro radios...

We're not necessarily in disagreement here. The equipment used in the
communications infrastructure (repeaters, links, etc) will not do trunking -
taken as a whole, it would be correct to say that the system as it stands
is not trunking capable. But the city has contracted with Moto for system
maint and upgrades (ostensibly to make the repeaters and links digital
capable) - and it's not inconceivable that this could lead to a revisiting
of the trunked option...

If the PD is serious about digital, they're probably going to have to
adopt a cellular strategy for siting repeaters, voting receivers and
the like - digital (in this topography) is not going to have exceptional
range. Once the complexity (and cost) of a cellular, digital-capable network
is accepted, it's not a huge stretch to begin to consider adding something
like smart-net - after all, once you've dumped millions of dollars into
a system like that, would you be satisfied with a 1:1 channel/freq map?
[maybe - but that's another debate]. On this scale, the additional
cost of going trunked might be negligable, with benefits any bureaucrat/
beancounter can appreciate.

It'd be easy to trunk the 484MHz band, and you wouldn't loose M/A
capability. You could patch the M/A freqs to talkgroups (the UCPD
has played around with a patch from VHF clemars to their 800MHz trunk),
and I *think* you can program a conventional freq (rpt/simpx) as a
separate TG - the controller can be told that dialing XXXX sends the
radios to freq Y - so long as Y is within the RF capabilities of the

radio.

: Brian Humphrey, LAFD PIO, tells me they expect LAFD to be required to go
: DIGITAL - but NOT trunked - within 10 years; mainly, I presume, as freq
: spacing gets cut to 6.25 from the current 12.5 khz with most analog systems.

That's not suprising at all - the new APCO standard is being pushed hard.
I find it sort of amusing that the FCC is fixated on 6.25Kc spacing and
digital comms when there's technology that'll do analog comfortably in 5Kc
(digital has its place, but for voice comms, you can't beat analog 8*)
I wonder how well digital will hold up (in range, reliability) in a major
brush fire scenario... say something like the fire in Angeles last year,
where they had to set up portable repeaters and links... [it could take
longer to validate the digital comms than to put out the fire 8*)]

But I digress. Foder for another thread...

73 all...

AFAIK there are no cell phones in the 400MHz bands. I do know that there are harmonics you can pick up from the 800MHz cell phones on the SC-150. Grove.net (at http://catmac.grove.net/CGI.SPG?L=S&P=SCN+23-P) still lists the SC-150 (B/Y) as dual conversion. Hope this helps.

Hope you have the capability to decode encrypted digital signals, because that's surely what they're using. At least that's the scoop here in Arizona.

6411. Low BC895XLT Audio

Newsgroup: rec.radio.scanner
Date: 1998-09-19 00:00:00 UTC
From: echofoxx@aol.com
Message-ID: <19980919031502.06315.00001816@ng40.aol.com>
Source record: 143713

I note the audio in the 800mhz portion, or on trunked systems is very low on my BC895XLT. Other bands are received loud and clear but 800 frequencies require the volume to be turned up about 3/4 of the way or more just to hear the transmissions clearly. Is this normal, or is this something to have corrected?

6418. Monroe County, PA?

Newsgroup: rec.radio.scanner
Date: 1998-09-19 00:00:00 UTC
From: bobs@icdc.com
Message-ID: <3604cb1f.3110886@news2.icdc.com>
Source record: 143720

I spend some time visiting my daughter in the Stroudsburg area and
would like to get a complete breakdown of the county's communication
plan for Public Safety.

Frequencies and their usage
Alpha designators for the various police agencies
Numerical designators for the fire agencies

So far I've determined the following:

Police
460.150 (Y) Pocono Regional
460.400 (B) Barrett Twnshp, (G) Coolbaugh Twnshp, (Z) Pocono Twnshp
460.425 Countywide (I think)
460.500 (A) East Stroudsburg, (F) Stroud Twnshp, (D) ?, (R) ESU, (S)
Stroudsburg
Need info on
460.275?
460.300 ? Never monitored
460.325? Never monitored
Who is C, L, E, X, D

FIRE
How is dispatch handled? 33.98?
Who uses 460.575 and 460.625
Are the following used and for what purpose?
453.075, .5875, .6375, .7125

Thanks...Bob

>where to get it, what to pay?

The SONY SC1PC I tested for Monitoring Times works well, though
the keypad command sequences are "quaint." :-)
It comes with a PerCon Spectrum CDROM, and all
the cabling and software for downloading
and control via a PC -- nothing extra to buy.

You can buy the SC1PC at selected Service Merchandise stores,
Grove Enterprises (800)438-8155, and other dealers.

From the FAQ article SCANNER RADIO REVIEW BRIEFS

[...]

SC1PC: 1998 vintage. Good RF and audio performance. Covers
25 - 1300 MHz, minus cellular phone. Selectable step size
and mode. Computer control and downloading with software
and PC cable provided. Powered by ordinary AA batteries.
Provided CDROM includes both the scanner control program and
the multi million record PerCon FCC license database. 10
banks ("pages" in SONY parlance) of 30 channels each. Per-
channel 2 second rescan delay. Unlike the ICOM IC-R10, you
can scan any combination of memory banks. You can lock out
("skip") memory channels from scanning. The frequency
stored in a skipped channel will also be skipped during
searches. One priority channel checked every 5 seconds.
SONY's limit search is restricted to one pair of search
limits, though computer control expands this to 20 linkable
pairs. Band search lets you search through 17 bands
programmed at the factory. Service search. A cache, termed
Intelligent Memory, stores the last 10 unique frequencies
that were active for longer than 5 seconds each. See "The
SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times,

If you were considering buying a CE-232 interface for your Pro 2004/2005/2006 scanner, now is the time to order ! The CE-232 will continue to be supported for several years, but the availability of this fine interface may end as soon as this Christmas. You wouldn`t want to miss out on the versatility of this highly desireable piece of equipment. (I ordered mine already !) I will post the particulars of this interface over the next week or so.
or, you can obtain info directly from :

I hope that when you get your interface installed and working
that you have a look at our program for windows which is a full 32bit
application called Pro-Turbo at:
http://www.iaw.on.ca/~jabba/pro-turbo.htm

Source record: 143529

Again, of the hundreds of dollars I have wasted, I have found that the simple Radio Shack collapsible whip with a center coil is still the best performer for "ALL" bands period. It costs around 12 bucks and collapsed is about the same length as the stock antenna. I love the performance of this little dynamo and feel it is one of the best kept secrets for those in the scanning hobby.

I used a chassis mount RCA plug for my 2006 dis output, making certain that there was a grounded, shielded cable attached to it. Make sure that you use a shielded cable from the computer to your scanner and that it's grounded at both ends. You might be getting rfi from the computer. The cable from the computer to the scanner makes a great antenna.

FM *Broadcast Band* doesn't travel as far as AM *broadcast band* due to the difference in frequency propagation. On the other hand, if you can get *any* of the FM signal at all above the noise floor, you can usually get a good clean signal.

With AM, since the information is carried in the amplitude portion, the weaker the signal, the weaker the "signal/information". Hope that makes since.

John,

I'm glad you responded to this message as I was going to shortly, with a similiar response. One thing we have to keep in mind, however. Don't be so sure that the government(customs) would not use something(or suggest the use of something) that was insecure. A good example of this is the 56-bit DES standard that they whole heartedly approved and required for many government sensitive but unclassified information. Their "approved" standard was broken back in July within 56 hours via brute force. If those radios were exportable(probably, as not to limited the market), the encryption used would have to be 40-bits or less -- which makes for a relatively easy attack on the protocol.

For more info - go to http://www.eff.org and follow the DES links.

Keith

Yeah, I agree, it certainly sounded fishy. I think this has all been resolved, though. This did conveniently bring up a question I've been meaning to ask.

Does anyone remember the name of a 'third-party' buy/sell company? I remember checking out their web page maybe a year ago. But basically, they acted as a go-between, payment would be submitted to them, tracking numbers submitted to them, etc etc. then, when both buyer and seller were happy, then money would be passed on. It was a relatively cheap service(maybe 5% of sale?), and they provided fraud insurance free, plus they accepted credit cards for payment and sent a check to the seller, etc.

Anyone remember, or know of such a place?

I don't do much buy/selling, but it would be nice to have that written down someplace for any online transactions...

Negatory, OYE BOY. I just enjoy putting you in your place for all the world to
see. No need to make wild, unsubstantiated allegations regarding sexual
preference or illegal activities.

>>Is that so, OYE BOY? How about a little hard evidence...you know, factual
>>information to back up this statement.

>sorry man, you were asked first, you prove that you weren't (too many
>folks with long memories in rec.radiocb can attest to that).

Sorry, OYE BOY. Looks like you need a referesher course in American Civics
101. Under our system of justice, the burden of proof is on the accuser to
prove his or her case. One is innocent until proven guilty. Again, I ask for
evidence and factual information to back up your statement.

>>Yup. It would be just IMPOSSIBLE to fudge the date, wouldn't it, OYE BOY?

>with an autoupdater, on a remote system? C'mon CBDIMBULB, just how
>stupid are you?

Yeah, right.

>>You have a poor memory, OYE BOY. Here...I'll help refresh it for you: it
>>was Covert 62 who originally made mention of your Web site on this newsgroup.

>at your behest.

Again, more baseless allegations for which you offer no supporting evidence.
Seems to be a pattern with you, OYE BOY.

>>Why don't you just admit that you've been found out and we'll drop the whole
>>thing. The jig's up, OYE BOY!

>sad, really... so delusional. sorry man, I cannot help you.

You cannot even help yourself, OYE BOY. And that is the truly sorry part of
this whole equation.

>>(unrelated and irrelevant nonsense ignored)

>really? are you afraid to face the truth about yourself?

(see above)

>>(more irrelevant and insignificant attempts at diverting attention from the
>>subject at hand ignored)

>about as iirelevant as you are.

Aw, come on, OYE BOY. Even you can do better than that with a comeback!

>>Gee, isn't that a coincidence. In a big city like Phoenix, you just
>"happen" to know who "he" is and where "he" works. Imagine that!

>No coinicidence, really. We have been comparing notes about you (and
>others) for the last 4 months.

And you talk about ME having too much time on my hands?

Still waiting to hear from your "lawyer", OYE BOY!

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

here we go again...blaming clinton for
your lack of "e d u c a t i o n".....

say fellah...Lewinsky stalked clinton...she
had sex with him willingly and responsibly.
She took it in the mouth. Just like you are
doing it.

as far as I know it's legal for
two adults to have consensual sex
in all 50 states....and it's not
a crime to deny what is not a crime.

so, what are those responsbilities
you now attach to the PResident which
you think he's guilty of....

remember: consensual sex is legal. It's
not a crime. How can what is legal be a
crime just because it's hushed up?

moron are you and those of your ilk.

I cannot stand the wimp Pres ... he wimped out
and that was his big mistake. He should have
gone to Vietnam and learned how to fight...
then maybe the JOHN WAYNE in him may have come
up fighting what Linda Tripp did to him....and
that's what it is.

as for scanning...too bad what goes on in the
WH is digital....

There's been a lot of talk about the Commtronics CE232 interface recently. One of the main features of that particular interface is its autoprogramming feature. If you are interested in autoprogramming, there is a far more flexible and considerly less expensive approach available called the PROgramit. In my opinion, it is also a superior alternative because of its simplicity and because unlike the CE232, it can be used with virtually any scanner.

For more information about PROgramit, go to http://www.qsl.net/ka2pyj/index.html. I don't have any connection with this particular interface or its developer. I'm just a satisfied user. While you are the site, also check out the instructions for adding an IR remote control to your scanner! It's quite neat.

Dan,

I've had the OS-456 Lite for obout a year now, and still
wish that I'd spent the extra money on the full version.
The lite version has the signal level capability removed,
along with something else that isn't significant enough for
me to remember. The signal strength allows the display of a
WiNRADiO like "spectrum analyzer". It also gives an S-Meter
representation. Oh well, live and learn...

Don,
Niceville Florida

======================================================================

MORE 3RD PARTY SUPPORT: -VADER-

-VADER- is a Voice Activated Digital Electronic Recorder from a space
age company, Intercept Technologies, that closes the gap on automated
SEARCH and SCAN when you're away from your monitoring post! VADER is
more or less a solid-state audio recorder that plugs into an expansion
slot in your PC and works with the CE-232 Interface to record and store
audio signals, hands off. Tape recorders do that, right? Yeah, well
tape recorders don't do what VADER does!

VADER uses the CE-232 to synchronize every bit of audio it records to
a logged file with the result that you can later do instant playbacks
strictly by frequency, channel, durations, and more! Furthermore,
VADER uses 16-Mb of cheap audio RAM to hold up to an hour's worth of
continuous audio, the format of which is easily converted to *.WAV and
other sound formats for digital signal processing and permanent storage
as desired. There is so much more to VADER that you'll need to contact
INTERCEPT TECHNOLOGIES at their BBS: (513) 297-0250 or write:
74 Western Ave, Enon, OH 45323

======================================================================

OTHER INFORMATION
=================

The heart of the CE-232 is a non-proprietary computer on a chip made
by Motorola (68HC11 family). But the neat thing is that this
microcomputer does not contain any firmware or hard programming like
others do! Instead, the proprietary software is on the supplied disk
and is loaded into the microcomputer chip each time you boot the
CE-232 program! This means that we or 3rd parties can develop
inexpensive updates on disk can be made available at regular intervals.
Other suppliers would have to provide a whole new chip to make upgrades;
more expensive to them and to you!!

======================================================================

HOW THE CE-232 IS AVAILABLE
===========================

The CE-232 is available in four different ways and forms:

1. As a Kit of essential parts, including a professional printed
circuit board; six DIP integrated ciruits; one non-proprietary
```

microprocessor chip & chip carrier socket; and a small handful of parts (resistors, capacitors, diodes, crystal, voltage regulator, etc.) Included is our proprietary program disk, you specify size.

Not supplied are standard DIP IC sockets (highly recommended); solder; wiring; serial cable; input & output connectors nor a project box in which to install the CE-232. The board can be installed in some scanners, if desired, but an external box is much better for most situations.

Included are a very detailed Manual, and Program disk with control program and many supporting files.

2. As an assembled and tested board, ready for you to install in a project box or in the scanner. Comes with the same Manual and Program disk as above.

3. As a totally do-it-yourself project, featured in Bill Cheek's new ULTIMATE SCANNER book with complete instructions and resource guide!

6455. The CE-232 and the Pro-43 (!)

Newsgroup: rec.radio.scanner
Date: 1998-09-20 00:00:00 UTC
From: Zombie Wolf <zmbwf@somtel.com>

Cross-posted to: rec.radio.scanner,alt.radio.scanner

PRO-43 HANDHELD SCANNER & CE-232 NOW COMPATIBLE!
==========

It had to happen! The CE-232 can be made to work with the Realistic PRO-43 with reduced capability from how it operates with the PRO-2004/5/6. The PRO-43 is designed quite differently from the PRO-2004/5/6 and therefore cannot function to the same levels, BUT.....the PRO-43 can be AutoProgrammed by the CE-232 and it can be controlled from the PC's keyboard! No claims are made as to any other functions, although limited scripts might be made to work. THAT is up to the User to determine and to apply, however. The following information is provided to assist you in determining the level of effort to adapt the CE-232 to your PRO-43:

The PRO-43 will require eleven (11) wires from the CE-232:

CE-232 PRO-43
Wire Destination
======= ===========
N PCB ground
Q DA-2; Col-6; Keyboard side
R DA-2; Col-5 " "
S DA-2; Col-4 " "
T DA-1; Col-3 " "
U DA-1; Col-2 " "
V DA-1; Col-1 " "
W R-22; Row-1 " "
X R-23; Row-2 " "
Y R-24; Row-3 " "
Z R-25; Row-4 " "

Additionally, on the CE-232, Points I-M must be tied high to a source of +5v and not connected anywhere else. This is not so difficult and there are a number of ways this can be done, but the Instructions show an easy way. Then, the CE-232 must be powered with the customary +8 to +16 vDC, probably from an external source. Finally, the CE-232 must be operated with a special program module consisting of a PRO-43 "Personality File" and a new PER.IDX file. This add-on program module can be copied straight into your normal HB directory and operated from HB232V13.EXE and, in fact, you can operate PRO-2004/5/6 for a while; do a quick disconnect and fire up on the PRO-43, and switch personality files, all in one fell swoop, if you arrange things just so. No big deal there!

Well, that's the sum and substance of the effort required to adapt the CE-232 to the PRO-43. Now you might wonder what has to be done to the PRO-43? Well, the above Chart pretty much tells it all. The thing that

can't be told in so many words here is HOW to do the job mechanically. Well, MY approach was to install a row of 11 pin-line sockets almost flush with the surface of the case on the right side of the case, just around the edge to the right of the LCD Display. Believe it or not, there is ample room along that THIN edge of the FRONT case, which is accessible after standard disassembly. There is a screw shaft column that goes down along side that area which mandates the pin-line sockets to be spaced in two groups, 6 and 5 with two blank spaces between the two groups (0.3"). This is an advantage because it allows the mating (male) pin-line plug to be "polarized" (6 & 5) for a one-way fit ONLY! The pin-line sockets can be made to fit into the case perfectly by first using a perf-board as a template, and melting the two groups of holes, one hole (0.1") apart, with a heated sewing needle. These melted holes form pilot holes after which they can be drilled with a 1-mm bit for a perfect fit. Drill 'em slightly larger and the entire pin-line strip can be sunk perfectly flush with the exterior of the case. I left mine protruding above the surface by about 2-mm. A dab of super-glue holds the pin-line strip securely in place.

The internal wiring isn't all that "hairy". If you did the cellular and 54-88 MHz mods to your PRO-43, then you should be able to do the simple 11-wires connections down on that same board. My judgement is that there's very little risk of severe damage if you take your time and know what you're doing in advance of actually doing it. My installation instructions will guide you every step of the way, I believe. That's it in a nutshell.....

The end result is that the PRO-43 can be AutoProgrammed by the CE-232 from your regular *.APF files, in the same manner as you're doing on your PRO-2004/5/6, within 5-mins or so (mine did 4-something) and you'll be able to operate the PRO-43 from the Keyboard of the PC just like with the PRO-2004/5/6. Beats punching all those tiny little keys on the PRO-43 for hours on end, eh?

Oh, the price. Yes. The regular price of the detailed instructions and the PRO-43 program files (disk size of choice) is $49.95 + $5 S&H, however, all past purchasers of the CE-232 are entitled to a discount of $20 off the regular price for a period of 45-days AFTER the invoice date of your purchase. The price of the CE-232 Kit with Programs and Manuals combined for the PRO-2004/5/6 AND the PRO-43 is $224.90 + $7.50 S&H.

The price for the CE-232 Kit, Manual & Program to operate ONLY with the PRO-43 (not the PRO-2004/5/6) is $194.95 + $5 S&H. The price of the PRO-2004/5/6 CE-232 Program Files purchased AFTER the PRO-43 is $69.95 + $5 S&H. It is not anticipated that the CE-232 will be available without one or the other of the Program Files for the near future.

Orders for the PRO-43 Program Files & Instruction Manual are now being accepted. Keyboard Control & AutoProgramming of the PRO-43 with the CE-232 is now a reality.

Also now available are CE-232 Program files for the PRO-37, PRO-34 and PRO-2022, and perhaps other popular scanners. Prices, conditions, terms

and specifications for each of these are the same as those for the PRO-43.

==========

+ All prices and specs given herein are subject to change without notice

6456. Re: Will a Good Portable SW receiver outperform AOR, Yupiteru scanner ?

>
>Anyway, at least in this instance, the AOR is outperforming the YB400.

I'm glad you qualified this test. Two notes:

(1) The YB 400 sideband feature is a cheap afterthought. The filter
is so wide (and the AGC is so poorly matched to the product detector)
that it frequently distorts, and adds in noise from the opposite
sideband. Using the YB 400 for serious sideband listening is not a
good idea. I'm not surprised that an AOR 8000 can outperform it.

(2) A 20 foot long antenna on 11 MHz working with a sideband signal is
not what I would call a strong signal test.

It's indeed possible to find conditions where one radio will
outperform the other and vice versa. Optimizing a receiver for wide
band sensitivity doesn't mean it will always overload, nor does
optimizing a receiver for crowded AM broadcast reception mean that it
will never overload.

But on average, you can see which one will be preferable.

Even if the YB 400's dynamic range were 10 dB better than the AOR 8000
(and it probably isn't that much), an unbalanced test like this will
result in the YB 400 overloading sooner than the AOR 8000.

Note for future tests: If memory serves, I believe the AOR 8000 has a
50 ohm antenna impedance whereas the YB 400's antenna impedance is
much higher. This results in much higher signal strengths in the YB
400 for a short (less than 1/4 wave) antenna. There is so much more
signal in the YB 400 front end that it might be appropriate to switch
in an attenuator to prevent overload.

So to level the playing field, I suggest using a conventional dipole
for the band in question. This will result in roughly equal amounts

of signal going to each radio.

Happy Listening!

If this is an ISA based interface you just got screwed by ordering one. ISA is going the way of the dodo bird right now.
If you are the type that is happy with an obsolete PC then I wouldn't worry. I am sure there are some folks still playing around with CPM and TRS 80's right now. Sheesh when you think of it the radios this thing interfaces to are technically obsolete. Still functional as long as they don't get hit by a voltage spike during a storm. I would get a new LCD display immedately as these fail with ageParts are getting hard to come by as Radio Shake depeletes it supplies.

If CE-232 interface is a strictly serial interface you can get by with an adapter if you decide purchase a new PC next year or there after.
No 1999 PC or later will have ISA or it will not be certified. There is quite a discussion about the need to get out of ISA even on exising PCs so the PCI bus will function better.
You can really get a boost by yanking all ISA cards right now and changing CMOS parameters on PCI settings.

The PCs that are under development will be magnitudes faster and cheaper then anything we have seen to date. Also being discontinued are PARALLEL, SERIAL, and IDE BUSES.
I am not sure but I think the FLOPPY DISK is to be phased out also like it was on the new MAC.
USB will have an adaper you can add to use old legacy serial and parallel devices. There will be many strong reasons to switch to these new designs, one of them is the strong conectivity issue. You will be able to link many different devices in your house or business with just plain telephone wire. The PC will become even more versital and useful then it is now.

Since the ISA sound cards are dead, if you need a sound card examine either USB speakers (no sound card needed) or something like the SBLive! which has a programable DSP on the card which can handle 127 audio streams at once in hardware. There are incredible things these new Intel CPUs can doin software that required hardware before in your PC. Read about just the advances in PC sound and how it is going to be handled at Intel's 3D RSX web site

Is that you, John Wayne ? I guess nobody ever went to the `Nam except you, huh ? Did you fight that whole thing single-handed ?

In Explanation, it becomes a crime when you STAND RIGHT IN FRONT OF A TV CAMERA, LOOK THE AMERICAN PUBLIC IN THE EYE, AND LIE ! It becomes a crime when you decide that, because of "technicalities" getting a "hum job" ISN`T SEX ! AND THEN YOU LIE SOME MORE ! It becomes a crime when you LIE when giving a sworn deposition in the Paula Jones suit (not that it had any merit). and then you LIE AGAIN to the grand jury ! It becomes a crime when you encourage OTHERS TO LIE ABOUT IT. I think you better read the Starr report, Mr. "eddicated". (You CAN read, can`t you ?)

Now, before you brand me a REPUBLICAN, you better think again ! I have been a democrat all my life, and my father before me. I voted for Clinton in BOTH elections ! I guess that you don`t care if he has to get an "OK" from PEKING before he can make a decision. He was not WORTHY to stand on the same turf that recieved the blood of Chinese freedom fighters in Tienemen square. By his very silence on human rights, he gives democrats a BLACK EYE. He continues to support "Most Favored Nation" status for a government that makes the NAZI STORM TROOPERS LOOK LIKE NICE GUYS!

Personally , I think YOU are the one who "lacks the smarts" to see the implications of this case that have NOTHING TO DO WITH SEX!

Now, Mr. John Wayne, if you don`t mind, I will close this little note to you, since I am probably talking to an idiot anyway. I will not see further

moronic garbage from you, since I have `plonked` you. Have a good day, Mr. John Wayne, and those of us formerly stationed in Phu Bai with the 131st Army Aviation will NOT salute you!

I am looking for an Icom R-7100 to upgrade my civil emergency / disaster preparedness station. Please state your price, condition and any mods.
Thank you,
Bob

6465. S-meter mod for PRO 2006 and OS456

Newsgroup: rec.radio.scanner
Date: 1998-09-20 00:00:00 UTC
From: Spumo <aintbadpeople@yahoo.com>
Message-ID: <6u3ktu$9ufq$1@newssvr04-int.news.prodigy.com>
Source record: 143609

Is it not possible to do the S-meter mod with the OS456 installed in a PRO2006?
I tried it and could not get it to work...worked fine in the PRO2035 with no OS board installed
I would really prefer an analog meter over PROBE'S signal strength display.
Also are there any notch filter schematics out there for the commercial FM band?

Thanks in advance

Spumo.

PS Please reply to my Email addy.

Excuse me, when did lieing on tv become a crime?
Cause I know a bunch a people who like to see HCI, BATF, or just about
any
other group of capitol letters that have ever held a TV press event
hauled
up on charges.

>It becomes a crime when you decide that, because of "technicalities"

I think that if the above statment is true you just put 90% of the
lawers in
the country out of business.

You might just be right about that but it wasn't worth 4 million of my
tax dollars to find out.

Doug T
to find out

This has nothing to do with scanning, but I have to add a small point to your "wasn't worth 4(0) million of my tax dollars" statement. Forty million dollars isn't that much, when you consider the fact that the trip to China alone was over 3 times more expensive - and much less productive. Almost any major (or minor even) production in DC is going to cost some big bucks... It's a given...

Don,
etc.

6468. uniden BC 144 XL Help

Newsgroup: rec.radio.scanner

Source record: 143613

Depends on what you consider "to be a Uniden" means. I feel certain that Uniden is the company contracted to manufacture this radio for RadioShack. However, you CAN'T get ANY support for it from Uniden. You CAN'T buy ANY parts for it from Uniden. You CAN'T even get Uniden to admit that they manufacture it.
You CAN get support from RadioShack for it (see http://support.tandy.com/). You CAN get parts from RadioShack for it (a parts list is also available on the website). It has a RADIOSHACK brand name on the front of it.
Now, you tell me, is it a Uniden model?

I think the fire dept's position and Humphrey's reply to Kali was just that, "a very political statement" that said nothing and meant nothing. The fire dept has lost my support and MY donations!!! Oh, and try and come take my antenna down, you'll then need to call the police dept.

6471. PCR-1000 Scanning program for DOS

Date: 1998-09-20 00:00:00 UTC
From: j-thomas@worldnet.att.net
Message-ID: <6u3ugc$v2u$1@nnrp1.dejanews.com>
Source record: 143616

Lost the manual for my 2006 and I forgot how to reset it. Simply hitting the button in the back doesn't get it.

How do ya do it?

Thanks!

6473. scanner-computer interface

Newsgroup: rec.radio.scanner
Date: 1998-09-20 00:00:00 UTC
From: zebra_z@my-dejanews.com
Message-ID: <6u3vlr$6j$1@nnrp1.dejanews.com>
Source record: 143617

/*scan.cpp for PLL2002 scanner like RS/PRO-2033, PRO-2030 etc. This program will allow you to connect your DUMB scanner to your computer. Yes, it works with even the dumbest scanners like PRO-2033 10 channel 50 $ scanner. And will allow you to get complete control of the scanners frequency ranges and bands. For now, it only works with the scanners which use PLL2002 PLL chip, and, this includes about 90% of all scanners made by radioshack.

This interface can be used like a no parts, no restrictions very low cost all scanner interface which will allow you q00% control of your scanner.

You will need atleast the following interface between the computers parallel port and the scanners internal circuitry: -

DB25 pins direction PLL2002/scanner Pin2 (D0) IN ------- pin9 on PLL2002 (disconnect the PLL2002 pins from the scanners UP) Pin3 (D1) IN ------- pin10 on PLL2002 (disconnect the PLL2002 pins from the scanners UP) Pin4 (D2) IN ------- pin11 on PLL2002 (disconnect the PLL2002 pins from the scanners UP) pin6 (D4) IN ------- pullup power, connect a 10 K resistor between pin 6 and pin 13 of the db25 pin7 (d5) IN ------- VHF frontend-select (disconnect this control pins from the scanners UP) pin8 (d6) IN ------- UHF frontend select (disconnect this control pins from the scanners UP) pin9 (d7) IN ------- 800 Mhz frontend select (disconnect this control pins from the scanners UP)

pin13 (s4) OUT ------- squelch output, connect a 10 K resistor between pin 6 and pin 13 of the db25

pins 18-25 ground ------- connect 1or two of these to scanner ground

It is very highly recommended that all these signals into the scanner be buffered by 74LS244 and those signals out of the scanner be buffered by a NPN transistor like 2N3904

As alaways, be very-very careful to not fry your scanners circuitry and LSI chips like PLL2002 etc.

PLL2002 control protocol (reverse engineered from CRO waveforms and logic analyzer dumps) The PLL 2002 has two registers:- R register= This divides the RefOsc to generate the Ref freq which is 4.1666/5 /10 /15 Khz typically This value sets the basic PLL step size N register= This divides the VCO to generate the signal to be compared against the Ref Freq. The value, in conjuction with R sets the frequency the scanner is tuned to.

The PLL2002 uses the 3 wire protocol to load values into these registers:- Pin 9 = clock, this is toggled from low - hi-lo to shift one bit into internal registers pin 10= data, this holds the bit value to be toggled into internal registers with the clock as above pin11= Enable or LE, this toggled

lo-hi-lo to COMPLETE the transfer of the data packet. Toggling this signals
the PLL2002 to load the R or N register

R packet 16 bits MSB first hold the R Value, 1 Control Bit always signal
that it is a R packet, then LE is toggled to complete this pkt

N packet 24 bits, MSB first, the first 8 (dummy)bits are always low, the
next 8 bits hold the N value, the a 0 control bit signals pkt completion

In fact writing the following string to the LPT1 by copy
<file-containing-string> lpt1 programs the PLL2002 to 162550 (Q:WHY ?)
00100100100100102320100100100100102320100100100100102320400010010232010010232
01001001023223223201023223201023201001001001023201001001040

usage

scan > scan.001 // scans VHF band from 137 to 174 MHZ and logs
frequencies found into scan.001 scan 162550 // loads frequency into
scanner scan R N // raw mode, allows U to experiment by setting
different step sizes etc etc etc.

Use borland C++ 3.0 etc to compile this program by Bcc scan.cpp.

This program is intended ONLY for educational purposes. blah blah blah.....

>parts for it from Uniden. You CAN'T even get Uniden to admit that they
>manufacture it

Well, my experience with Uniden is if it did say Uniden, you had proof it was a Uniden, and Uniden even acknowledged it was a Uniden.... you still could not get support, parts a straight answer, or anything resembiling customer service.

Is there an after market antenna that out performs the rubber antenna supplied with the scanner? I saw a advertisement a while back for a portable antenna that looked like a mini space helmet (round W/ wires extending from a main ball). They made claims that it offered improveded receiption for all frequencies. If such an antenna or something simular works, you someone supply with the products name and place where I can buy one. Thanks Bob

6482. Pro-2004 Problem HELP!

From: bigbadwolf1@earthlink.net
Message-ID: <36059FC8.8CD6195E@earthlink.net>
Source record: 143626
Body handling: Binary attachment payload not displayed: vcard.vcf

I have a Pro-2004. The scanner has an intermitten problem with going haywire sometimes.
While scanning, it will suddenly loose all reception on a station and the resume scanning. When it does resume scanning, the receive just seems to disappear. The receive goes dead even when I turn down the squelch. It may continue scanning like this for a few minutes, and then the display will go absolutely wacky. (???). The weird thing is, after I shut the scanner off and then back on, it will scan and receive normally. I've changed the 9 volt battery and there has been no change. Any suggetions on this "possessed" box ?

[One or more binary attachments are retained only in the source text.]

<snip snip>

I don't feel that the sex part is the problem, I personally don't care
if he banged all the females in D.C., but the fact that he took an oath
to TELL THE TRUTH and didn't, and furthermore, attempted to have others
lie or have them unknowingly tell lies because they repeated what he
told them is what hacks me off!

Besides that, what company in the country wouldn't fire employees for
getting it on in the workplace, before/after/during working hours?

> remember: consensual sex is legal. It's
> not a crime. How can what is legal be a
> crime just because it's hushed up?

Once again, the sex part is NOT the problem! ITS THE LIES!!!!!!!!!!!

> moron are you and those of your ilk.

If you were the leader of a country and had to deal with this guy, would
you trust him? If you did, YOU WOULD BE THE MORON! I don't have to deal
with him and I don't trust him! Never have, never will!

<snip snip>

From: Mike Palazzola <mipal@abac.com>
Message-ID: <6u48dd$c26$1@news1.abac.com>
Source record: 143628

I have heard you can connect a CE-232 to a PRO-2022 to program it.
I looked at the keyboard wiring at the pcb and they don't
line up with a standard X Y row matrix. Is there a hookup diagram to
interface
to it ? If so where can I find it?

Thanks
Mike Palazzola

It does seem rather suspicious. Although I would say that anyone who sends anything through the mail/Fed Ex/UPS without insuring it is an idiot and deserves whatever befalls him, if the intended receipient is unwilling to assist with resolving the matter, I would suspect that it's not a kosher deal to begin with. I would not give him back his dough until that has been resolved.

HI.. you can locate his Postmaster for the delivery address. The Postal Service takes these types of disappearances very seriously.. that's what the postal inspectors are for.

You won't know if the recipient's story is fraudulent unless you check with the Post Office. With all of the forms they utilize, i'd be surprised that he mailman would scribble a note on a plain piece of paper and attach it to some other piece of mail.. sounds fishy to me.

cheers
WB

When this question was first posted I answered that conventional wisdom said that a dedicated SW receiver was better, but that I had no direct knowledge. Well, now I do. Yesterday I purchased an AOR 8000, and tonight I'm using it to monitor USAF traffic on 11.175USB. Using the same antenna, the AOR is out performing my YB400. The antenna is one of the Sangean roll up portable ones, about 20 feet long, stretched across the living room. This antenna comes with a little plastic clamp that grips the whip antenna on a shortwave portable such as the ATS909. To facilitate its use on the AOR I replaced the stock rubber ducky with a collapsable metal whip I had in a junk box. The whip was originally designed for use with a Tandy frequency counter.

Anyway, at least in this instance, the AOR is outperforming the YB400.

> thanks,
>

Yes, you can power the scanner from the power supply that you charge
the battery pack with *if* it has a capacity of at least 200 mA and
the plug is center tip negative. The scanner has a built-in charging
circuit that allows you to charge a rechargeable battery pack while it
is in the scanner. Note that this will *not* work using the standard
battery holder with Ni-cds *unless* the battery holder is modified.
The scanner should retain the frequencies for some time with no power
so you shouldn't have a problem there. I recently began reusing a
PRO-2026 that had been stored for several months and was surprised
to find that it hadn't lost the programmed frequencies.

The PRO-64 is capable of interfacing with a PC which is real handy for
loading new or old frequencies. All you need is an easily constructed
cable which plugs into the scanner's earphone jack and any one of
several available software programs. No modification is required to
the scanner itself. Check out Ken Plotkin's Scanner Page at:

http://www.access.digex.net/~kplotkin/scanner.htm

The yupi will outperform the sangean and aor. I own a yupi 9000, aor
8000, sangean 909, and yaesu frg-100. For shortwave the yaesu is the
best as would be expected since it is designed for this use. But the
9000 comes in at a close second when hooked up to a good antenna and
not placed too close to a computer. Keith

Sounds like a use that it was intended for. Before FRS, GRMS would
probably have been used for that purpose, and that would have been a bit
of over kill. More than what would be needed.

"...at its disposal...", not "necessary" - don't add your own words
to the FCC's regulations. Now, if you're able to think in a legalistic
sense, ask yourself what equipment would be at the disposal of an
"amateur station."

I've written to the FCC regarding this matter - I'll post their
reply to finally settle this issue.

Jeff

I think that your reply to Kali on this issue is hypocritical , legally correct, and beneath contempt. You sound like Bill Clinton trying to wriggle out of HIS responsibiities.

As far as your statement that you respect other people`s property and their involvement in the field of emergency work, I say, balderdash. You wouldn`t be encouraging others to become some kind of "hit squad" against these emergency operators if that were true.

resign.

6512. CE-232 Particulars post # 1

Newsgroup: rec.radio.scanner
Date: 1998-09-20 00:00:00 UTC
From: Zombie Wolf <zmbwf@somtel.com>
Message-ID: <6u2t5dppf1@garnet.mint.net>
Source record: 143677

OVERVIEW
========

The CE-232 Scanner/Computer Interface is a 2.5" x 3" electronic board that goes between an IBM-PC/XT/AT/compatible computer and a scanner, for some very powerful capabilities.

The CE-232 is a -smart- RS-232 Interface controller and data acquisition system for some scanners and at least a drudgery-free automatic programmer and remote controller for all supported scanners.

The CE-232 eliminates the drudgery and disappointment in scanning by its ability to "AutoProgram" up to 999 memory channels from a plain ASCII text file in a short time, error-free and exactly the way you want it.

The CE-232 also allows control of the scanner from the computer's keyboard; a strong plus for handheld scanners and those with hard-to-operate keyboards!

The CE-232 is a one-way controller and AutoProgrammer like described above for MANY scanners, including the PRO-2042, PRO-2035, PRO-2022, PRO-43, PRO-39, PRO-37, PRO-34, PRO-26, etc.

The CE-232 is a TWO-WAY controller and data acquisition system for the time-honored PRO-2004, PRO-2005, and PRO-2006 scanners which have unique circuitry that allows the CE-232 to do a LOT more than just AutoProgram and Remote Control, including log data on "hits", reject undesirable signals, look up data about a certain frequency, and much more described below.

Inquire for details about these or the many other scanners with which the CE-232 Interface is powerfully capable.

6513. CE-232 particulars post # 2

Newsgroup: rec.radio.scanner
Date: 1998-09-20 00:00:00 UTC
From: Zombie Wolf <zmbwf@somtel.com>
Message-ID: <6u2tetpqo1@garnet.mint.net>
Source record: 143678
Cross-posted to: alt.radio.scanner,rec.radio.scanner

DESCRIPTION OF CE-232 PERFORMANCE & SPECS
==========

** Operate the scanner from the Computer's Keyboard! **

REMOTE CONTROL FROM COMPUTER'S KEYBOARD:

Virtually all functions of the scanner can be operated from the computer's keyboard. For example, a replica of the scanner's front panel is displayed on the monitor along with a keypad emulator to show the keys to be pressed as if you were operating the scanner in a normal manner. The CE-232 does not slow down the scanner nor alter its peformance in any manner! Not only can you operate the scanner from the computer's keyboard, you can also operate normally from the scanner as well.

NOTE FOR PRO-2004/5/6 ONLY: As the scanner operates, the computer monitor displays EVERYTHING that the scanner shows in its LCD display!

==========

** The scanner is AutoProgrammable by the CE-232! **

AUTOPROGRAMMER

The CE-232 can auto-download into the scanner's memory up to 999 channels at a time, from a previously prepared plain text list of frequencies! Auto-Programming includes channel, frequency, DELAY, MODE, and LOCKOUT functions as desired.

This AutoProgram feature applies to all supported scanners, limited only by the number of memory channels in the scanner, up to a maximum of 999.

You can also manually program the scanner from the computer's keyboard, in conjunction with normal remote keyboard control as described above.

NOTE: The AutoProgrammer function of the CE-232 uses a very simple ASCII text format, well within the capability of any text editor and/or database manager to construct and lay out.

** The CE-232 has excellent 3rd party support **

Now get this: the PerCon Corp (regional+) FCC-Databases-On-CDROM have a special export feature for the exact type of file format (*.APF) for quick and automatic generation of AutoProgrammer files for the CE-232 Interface! Within minutes, you can have thousands of frequencies for your area ready to be AutoProgrammed into your scanner! For more information about

PerCon Corp and their FCC Database products write or fax:

PerCon Corp; 4906 Maple Springs/Ellery Road; Bemus Point, NY 14712
Fax: (716) 386-6013 Voice: (716) 386-6015
E-mail: admin@perconcorp.com http://www.perconcorp.com

==========

** CE-232 has 4 Electronic Switches for User Control
of modifications & other scanner functions **

USER DEFINABLE CONTROLS

The CE-232 offers four user-definable switches that can be used to control add-ons or other modifications that you may have done to your scanner! Uses for these User Switches are virtually unlimited, but might include turning on/off things like Automatic Tape Recorder Switches; extra memory banks; Data/Tone Squelch and any other of my mods or add-ons that you've developed or acquired. These UserSwitches are controlled by YOU and, if desired, automatically by the computer using the Script function! (The Script Function is described below.)

(User Switches available for all supported scanners)

==========
THE FOLLOWING FEATURES ARE AVAILABLE ONLY FOR THE PRO-2004/5/6 SCANNERS
==========

** Easy-to-use AutoLogger feature **

AUTOLOGGER

The CE-232 will AutoLog for unlimited periods of time, any and all activity encountered by the scanner, regardless of the mode. Each -event- (squelch break) is logged to a text file as a data line item containing the following information at a minimum:

CHANNEL: number
FREQUENCY: MHz
MODE: AM, NFM, or WFM
DELAY: status, set or not
LOCKOUT: status, set or not
FUNCTION: Prgm, Man, Scan, Search Up, Search Down, etc
STEP: Search increment, kHz, if applicable
DATE: of event
START TIME: of event
DURATION: of event (seconds)
(and more): several user-definable parameters including S-metering!

Autologging can be turned on or off at will. Autologged files are automatically opened and named with a date/time logo, similar to: 96070812.LOG meaning: 1996, July 8, 12th hour (noon).LOG. Each hour, a new log file is opened and the old one closed & saved.

Autolog files can be AutoProgrammed back into the scanner's memory at will with no manipulation or changes; just the press of a couple of keys! This means that you can do a SEARCH function all night or day while you're away and then at your leisure, program in each new found frequency quite simply, hands-off, in a matter of minutes!

PRO-2004/5/6 feature only

==========

** CE-232 rejects "birdies" and other undesired signals! **

AUTO-REJECT

You can do like I did.....disconnect the antenna; set the ATT switch to the -10 dB position and do a SEARCH from 25 MHz - 1300 MHz with the autolog feature ON. About two hours later, you'll have a file that contains just the BIRDIES in your scanner! Now you rename this file to something like BIRDIE.REJ, and the next time you do a frequency search, you can specify another CE-232 function called AUTO-REJECT, that prevents the scanner from locking or stopping on a "birdie".

But that's not all! You can insert other undesirable frequencies into the BIRDIE.REJ or another *.REJ file, so not only can you EASILY make the scanner forever reject birdies, but also pagers, data channels and other obnoxious signals that you don't want to monitor!!!

PRO-2004/5/6 feature Only

==========

** CE-232 offers a LOOKUP feature for I.D. of signals! **

AUTO-LOOKUP

The CE-232 sports a LOOKUP function which displays your data for a frequency every time the scanner STOPS on an active signal! Your previously prepared AutoProgrammer File will do nicely for this function, and thereforewill display whatever is in your database for that frequency! Great for quick identifications of the signals received by your scanner!

PRO-2004/5/6 feature only.

==========

** CE-232 offers a Script Language to automate scanning! **

AUTOMATED SCRIPTS

And, now comes perhaps the most important feature of all: a very powerful -script language- which lets you automate a series of functions to make the scanner do various things while you're away or not interested in being right there for the operation! In simplest form, you can make a Search & Store function to log everything it hits the first time, but to reject duplicates if hit again! You can make things happen at certain times and stop at other times; and otherwise

the Script Language allows you to write your own convoluted functions and procedures! Essentially, this scripting feature is much like a macro function; you write your own ticket! And it's not difficult, either. In fact, many scripts are provided with the program!

PRO-2004/5/6 supported feature (but may work with other scanners)

==========

** The CE-232 has flexible inputs/outputs for the User **

USER-DEFINABLE INPUT/OUTPUT BITS

The CE-232 offers 22-bits of unallocated, user accessible I/O registry. There are 8-bits of Output logic that can be controlled from the CE-232 Script feature simply by setting -low- and -high- in these bits. The implications are enormous considering that a variety of logical operators can be configured to turn various bits on and off, depending on a variety of user defined input data. The status of these user-defined and script controllable OUTBYTES is displayable and recordable by the AutoLogger.

The CE-232 offers 14-bits of Input Logic that can be tested from the Script function. High and low logic (+5v and 0v) can be applied to these input bits from external sources, much like sensors for idiot lights in a car. One application we have developed is for an S-METER! The AutoLogger can read and store these Input bits, so every -hit- can be associated with a signal strength!

> In defense of Mr. Humphrey,

Looking back at the original post and the initial reply - those of you
who have-
I have serious doubts about the truth of both parties.
Tearing down an antenna is a CRIMINAL ACT regardless of hmeowner
association rules. I find it hard to believe that LAFD would condone
such a deed.
The alleged response from LAFD never mentions the criminal act - that
would be the first thing I would expect if this was a real incident and
real response.
Does anyone have proof of the action? or the response?

AND HOW DID THESE IDIOTS TURN THIS INTO A CLINTON ISSUE -- THOSE
ASSHOLES!!!!!!!

Source record: 143433

I was just in the southwest suburban area of Indianapolis on my way up to Champaign, IL to see the Louisville vs. Illinois football game. I made my first attempt at listening to MECA with my BC235XLT in my hotel room. What I can't seem to understand is how to fit all those talkgroups into this scanner because it only allows 50 talkgroups per trunking enabled bank. I tried putting all of MECA's frequencies into all of the 10 banks on my scanner. All of the talkgroups fit but I can only scan 50 at a time because I have to switch banks to get to the other 50 or so talkgroups. Could someone tell me the correct way to handle this system?

True, true, and true, but did someone from the LAFD suggest to the
Homeowners Association and or Management company that the LAFD position
was that such antennas should be removed. If they did not, please say
so. If they did, please say way they felt they were a hazard.

>

Absolutely correct, they are not blamed for physically removing the
antenna, but did they instigate the action by word or deed?

Please, enquiring minds want to know!

> off the USB bus with an USB/SERIAL adapter for years to come if needed.

Okay Victor. Your initial post alleged that a purchase of a CE-232 was a "waste of money". You based your arguement on an assumption that the CE-232 was an ISA device. You've been advised that it's a serial device. (Methinks your arguement just fell through the crapper with that gaff Victor) Logic would dictate that you would follow that line by offering *your* opinion on what device would outperform CE-232 on interfacing a scanner to a PC. (That would a device available NOW Victor).

> But in patience I will direct you to the press releases last week from Intel
> and the various speechs at a major conference on PC chips. This was where
> Intel revealed they are cutting the prices of the P2 by up to 29%
> immediately and where they detailed how the new instructions will work in
> next years chips.

Nope, no opinion here on what out performs the CE-232. And as a matter of fact. I don't understand what this has to do with interfacing a scanner to the PC sitting on my desk.

> IDE, ISA, Parallel, Serial etc. are all being discontinued in the new design

> fight change. BTW I switched to slot one on a BX mainboard and followed
> other suggested changes and I definitely see the benefits.

So let me see if I got the gist of your point: Current PC's will be rendered obsolete by new advances in technology. That's hardly earth shattering news. Are you suggesting that everyone stop using their current equipment because

newer and faster boxes are around the corner? Is it OK if we all continue to use our equipment until we buy new stuff? Is that OK with you Victor?

> Anyway there are more appropriate groups where these are discussed and
> followed. When you get a chance you might bring yourself up to speed by
> checking it out.

There sure are Victor. One would wonder why you're not there now instead of carrying on about this here in a scanner group. The orginal thread was about the CE-232 interface. You seem to be attacking it. But I don't follow the logic of your argument. If there is a better product for interfacing a scanner with a PC, that offers more features, why not work your arguement in that direction?

6529. FS: Bearcat BC760XLT

Bearcat 760XLT 100 ch scanner w/ PL board installed.
Has service scan buttons, backlighting, etc. Comes with
AC adapt, stnd DC adapts work fine too. Great for
home or mobile. Ant and book included. Probably
can be modded for cell, but I haven't bothered. I'll
ship to anyone in the 48 via USPS. Make me a
reasonable offer... I'm not looking to get rich, I just have
more scanners than I need. Thanks.

SCANNER MODIFICATION HANDBOOKS
Vols 1 & 2

THE SCANNER BOOKS
OF THE 90'S !

SIGNED BY THE AUTHOR (Bill Cheek)

The Scanner Modification Handbooks are available from the author with his autograph for $18.95 + $5 shipping & handling. (Canada, $9.00 S&H; other foreign, $11.00 S&H. Add sufficient extra funds for air mail if desired.) See ORDER.TXT for ordering information.

Volume 1 of the Scanner Modification Handbook proved that the average hobbyist could easily perform some relative simple changes in the equipment and emerge from the experience with a greatly enhanced scanner. The step-by step instructions and photos left no questions unanswered and even totally non-technical people found that they could restore functions that had been locked out at the factory, or add anywhere from 100 to 6,000 more memory channels to popular scanners such as the Radio Shack Realistic PRO-2004, PRO-2005, PRO-2006, PRO-34 and others.

In Volume 2, modification master Bill Cheek brings you more great enhancements for the PRO-2004, PRO-2005, PRO-2006, PRO-34, PRO-2022 and Uniden Bearcats BC-100XLT, BC-200/205XLT, and BC-760/950XLT. He shows how to adapt many of these modifications to other scanners as well. In Volume 2, you'll get new circuits and simpler but more effective approaches to adding signal strength meters, adjusting the scan delay time (0-12 sec), speeding up scan & search rates, decoding and using CTCSS tones, adding more memory channels, adding an event counter, shielding plastic cased equipment, reducing interference, restoring locked out bands, adding center tuning meters, and more. Vol-2 also contains updates to the modifications that appeared in Vol-1, plus more tips, hints, explanations, and tricks of the trade to make scanners more useful and versatile.

Learn how to realign your PRO-2004/5/6 scanner; how to use a VCR to record the action from your scanner; how to diagnose and repair some scanner problems; how to use Computer BBS's to improve your scanning knowledge. Find out about buying a used scanner; about collecting scanners; how to get a big boost in the audio output of your scanner; how to build a bench power supply and lots more. It's all there in Volume 2 of the Scanner Modification Handbook, You'll even learn about dealing with those new trunked 800 MHz systems that seem so difficult to monitor.

There are plenty of photos and the text is written so that the average hobbyist can follow the clear step-by-step instructions. And, you don't need exotic test equipment or extra special tools to do these modifications. Scanner owners will find Vol-2 to be a valuable and constantly useful reference in many ways. A few modifications suggest that the user be familiar with the information in Vol-1 first.

I suppose the Tables of Contents are about the best thing we can offer for your one-stop shopping please. Here they are:

==========

MODIFICATION IMPROVEMENT

After the manuscript for Vol-1 was submitted to the Publisher, I developed an improvement to MODs-16 & 19 for the Extended Memory Board (6,400 channels in the PRO-2004/5/6 and 3,200 channels for the PRO-34, PRO-2021 & PRO-2022). Refer to pages 130-131 and change the four 1-k or 4.7-k resistors, R1-R4, to 68-k to 100-k. This improvement reduces the current drain from the Memory Retention Battery when the unit has been removed from AC/DC power. The original 1-k or 4.7-k resistors draw much more current than necessary, so mark your copy of Vol 1 for future reference.

==========

SCANNER MODIFICATION HANDBOOK, VOLS 1 & 2 MOD NOTES

MODs 12 & 13 are discontinued; replaced by a hot, new MOD-25 (and/or MOD-26) in Vol 2. MOD-6 is ok, but is replaced by the new MOD-33. MOD-17 is worthless; forget it. MODs 16 & 19 have some hot, new options in Vol-2. Computer interfacing of the PRO-2004/5/6 has been introduced in my new

"WORLD SCANNER REPORT" for the latest on this, new mods, tricks and more.....see other files herein.

The person who would do what you describe above had better be able
to justify that there was NO way that same transmitter could have
completed the necessary task on a legal amateur frequency.

In regards to having am amateur license for your above example,
it would make no difference. An unlicensed person could do
the same in a genuine emergency.

I would like to know what a PRO-2006 would go for without a manual or box.. The radio is in great shape without any scratches and the backlight is bright. It has been mod for cellular. I could sell it or just keep it to hook up to a CE232 interface and do the programming from computer thing. Having the money would be nice to buy another scanner later. I have a RS PRO2050 that replaced it. I have been offered $200.00 with manual and am not sure if I am being taken. I am not trying to make out like a bandit but I also don't want to be taken advantage of either...at least not here <G>. thanx in advance

I'm not sure why we would be "untruthful", but you are welcome to your opinion.

>Tearing down an antenna is a CRIMINAL ACT regardless of hmeowner
>association rules.

In many cases, yes. The removal of an antenna can and in many cases is unlawful. There are exceptions, but for the most part I'll agree with your premise.

>I find it hard to believe that LAFD would condone
>such a deed.

The person or persons who removed/damaged the antennas (plural) is alleged to have done so on behalf of the HOA or Property Management Company. The LAFD was not party to such action. It (the HOA action) was not a matter we were aware of, so we could neither condemn nor condone what took place as it was happening.

>The alleged response from LAFD never mentions the criminal act - that
>would be the first thing I would expect if this was a real incident and
>real response.

The first I knew about it (the removal/damage) was when my friend (yes, my friend) Khalil wrote me an e-mail. He told me he went straight to the Police. As I understand it, he was told it was a Civil matter between him and the HOA/Prop Mgmt Co.

>Does anyone have proof of the action?

Khalil says that he returned home to find the antennas and assorted equipment removed/damaged. I believe he says the HOA fessed up, but I am not sure. We were busy fighting fires while all of this was taking place.

> or the response?

We have had no formal response, because (as of yet) no one has shown how we are directly involved in the damage that occured during the physical removal.

>AND HOW DID THESE IDIOTS TURN THIS INTO A CLINTON ISSUE -- THOSE

ISA
>>is going the way of the dodo bird right now.

You know, Mr. Healey, maybe you should READ THE POSTINGS about the 232 BEFORE you make inane comments that prove conclusively that you DIDN`T read them. The 232 DOES NOT PLUG INTO A SLOT IN THE PC. The only thing required on the PC end of this hookup is a serial port. If you are on some sort of "crusade" against Winradio or ICOM, then please confine yourself to those products. Your credibility is seriously slipping here, simply because you must go off half - cocked all the time and babble inanities when you have not taken the trouble to learn ANYTHING about what you are talking about.

The venerable parallel port is not going anywhere, and will be around for the forseeable future. As a matter of fact, it has undergone several improvements in the recent past, (ECP & EPP) , that make it more than fast enough to keep up. The newer computers bus master the parallel port, which makes it AND the processor a good bit faster than in previous computers.

>If CE-232 interface is a strictly serial interface you can get by with an
>adapter if you decide purchase a new PC next year or there after.
>No 1999 PC or later will have ISA or it will not be certified. There is
>quite a discussion about the need to get out of ISA even on exising PCs so
>the PCI bus will function better.

Once again, you have not done your homework. You have confused the ISA bus with the serial interface. Other than running a modem plugged into an ISA slot, I fail to see the connection between the two. Doing away with ISA will NOT do away with the serial interface. On my computer, which is a Pentium II 300 of the latest ilk, there is no relationship between the two. Furthermore, the "existing PC`s" you are referring to in this post DONT HAVE PCI BUSES ANYWAY. If the computer has only ISA expansion slots, could you please explain to me how you are going to go "straight PCI" ? (You will be staying up late nights with a soldering iron and a hardware book Mr. Healey.)

This idea you have that BLAZING speed is needed to run a radio interface from a scanner that scans 50 channels a second is totally in error, Mr. Healey. I would bet money that a lowly 286 could handle the job without a hitch !
Now, Mr. Healey , as I said , if you are going to launch into diatribes on hardware and software/PCI vs ISA buses, then we would appreciate if you would simply learn something about them before spouting off indiscriminately and showing those who DO know something about it your almost TOTAL ignorance of the subject matter.

Well, I'll add my 2 cents here. I downloaded version 272 a while ago
and never tried it. When I saw another post here, I forgot why I didn't
try it the first time so I downloaded version 301 intending to give it
a try.

When I unpacked the .zip file and looked through the readme.txt file,
I remembered why I hadn't tried it before.

The fact that it will timeout after 20 minutes or so made me feel that I
couldn't make a judgement on it's value to me. Even running multiple 20
minute sessions wasn't worth the trouble so I never even gave it a try. I
can understand the need to have some limitation on it's free use but if it
gave me enough time to thoroughly evaluate it I'd be more inclined to check
it out. If it would run for 24 hours just one time, or expire after some
number of days, maybe I could run it long enough to feel that I couldn't live
without it. I'm running a 300mhz system so I would expect that my timeout
would be on the short side. I just don't think that 20 minutes is enough time
to become familar with it.

Also make sure you install a .01uf capacitor on this line to
isolate the chip from the rest of the system, because if this gets
shorted out by accident you could blow the chip.

And I never claimed to support the Pro2042. Just the Pro2004/5/6,
and I don't believe that Bill claims to support the Pro2042 with the
CE232. BUt if you are going to go to the trouble of installing a
Programmit into a Pro-2004/5/6 just to autoprogram it, for a little
bit more you can have the CE232 and Pro-Turbo and autoprogram your
scanner and do a WHOLE lot more!

Before I built the CE232 the cost of the Programit was looked at and
from where we could find the parts that is about what it was going to
cost us. The one chip for the serial version was around the $20 mark.
Maybe you have a better price on the chips needed than we were able to
find.

I have never devised or appropriated any name, the CE232
interface I am talking about is the one from Commtronics Engineering

and was built from the book The Ultimate Scanner Book 3.

>comes anywhere near its flexibility and performance.
I agree that there is no other combination that can match the
performance of that for that kind of money, but with a CE232
interface and Pro-Turbo you can have that performance for less money.
Why install 2 interfaces into a scanner when one will do. Sure you
can put an OS456 lite into the 2005 and 2006 and then have to install
the Programit to program the scanner so that you can use it elsewhere
without the computer connection. If you have a Pro-2004 the
only option for computer control other than autoprograming is the
CE232 interface and with Pro-Turbo you can do a whole lot more.

As i said, you don't have much of an education
that would allow you to see what I was getting at
referring to the JOHN WAYNE syndrome...it's an
idea which one uses to emphasize an idea, not literally.

Excuse me: I said: having sex between two consenting
adults is not criminal. It's not a crime. IF it's not
a crime, then what is said or done afterwards is still,
not a crime.

You really are going off into the land of "weirdsville"
and "stretched sense of self" and a "reality base"
of which you even are not sure of.

your explanations below tell me and others you have a major
problem with "truth"....

Again...Sex between two consenting adults is not a crime.

If it's legal, then you cannot label it "illegal" just
because they don't tell you all about it and get around it
by telling you what they want to tell you....

Sex between consenting adults is not criminal: meaning
it's not punishable by threats of impeachment or perjury
or "stupidity"...well, stupidity is the president in this.

he should have taken the Fifth and allowed it to play out.

Get a grip on your "thumping" of being an ex-soldier...it'
is not doing you a bit of good when dealing with reality.

bill conduit
etc.

>
GET THIS: Sex between adults who have it consensually
is not a crime...the government is not involved in your
act. Therefore what you say about it to whomever you
tell it to is not a lie leading up to impeachment.

If it is legal, you do it legally and that's it. How
can you lie about it if it's legal?

To lie about a legal act is a position which is personal
and "macho", not wanting the neighbors to know, etc.

Protecting Dulcinea's virtue is what is implied. Clinton
is a man of HONOR who don't like women being compromised.
Not too bright, is he? he was doing what southerners do
when with women...but now it's found to be a lie because
he's the pres and it's done on or in the White House.

Excuse me...JOHN F KENNEDY screwed plenty women in the
White House. And off or away...it's history. He was
having legal sex. Nothing in the law about "where".

Look...founding fathers had sex on the job in the White
House too. Alexander Hamilton had sex in White House.
and they could not impeach him. SEems the founding
fathers made it an unimpeachable offense.

what they did find impeachable is: "IN 1787 THE MEMBERS
OF CONGRSS passed legislation that stated for purposes of
impeachment, they intended (founding fathers) 'high crimes
and misdemeanors" to be actions against the United States
of America.

How, how can a spot or two of dried cum harm the USA?

6551. Chicago Scanning CARMA E-Mail List

Newsgroup: rec.radio.scanner
Date: 1998-09-21 00:00:00 UTC
From: tandkmoran@aol.com
Message-ID: <19980921083622.23103.00000381@ng70.aol.com>
Source record: 143487

The Chicago Area Radio Monitoring Association's newsletter has been converted to an e-mail list!

All list functions, help files, etc can be accessed through our host's web site:

http://www.qth.net

To subscribe manually send an e-mail message to:

majordomo@qth.net

In the body of the message type one of the below:

subscribe carma

-or-

subscribe carma-digest

(Whichever you prefer; the "subscribe carma-digest" command results in you receiving a compilation of messages, when ever the buffer is full - about 40k. The regular subscribe command results in you getting the individual messages as they are sent)

You will receive an authorization code and further instructions. Essentially, you just send the coded command back to majordomo@qth.net

Postings to the list go to:

carma@qth.net

You must send the subscribe commands, (all commands, in fact) from the same address you will use to receive the messages. Remember, commands go to majordomo@qth.net, postings go to carma@qth.net

You must be a subscriber to post to the list. You can only post to the list from the address your subscribed to / from. Of course, you can subscribe yourself from more than one address.

If you are a scanner buff in the chicago area you'll probably want to be a subscriber.

And don't forget our web page:

http://www.theramp.net/shabec/carma.htm

Or the BBS:

(630) 852-1292 8/n/1 ($15/yr for full membership)

Snail mail still goes to the PO Box, but we are no longer accepting new subscriptions to the printed version of the newsletter (or renewals). If ya got paper, send it to:

CARMA
PO BOX 2681
GLENVIEW IL 60025

Happy Scanning!

The next official meeting of the Chicago Area Radio Monitoring Association will be held on Saturday, October 3rd, 1998, at Phillies Restaurant Bar and Pizza Grill. It's in the Willowbrook Shopping Center, located at the south east corner of 63rd Street and the Kingery Highway. Lunch is at Noon. You must purchase a lunch, since we get the room for free. The pizza and the fried chicken are excellent.

The meeting starts at 1:00 PM, and usually runs a couple of hours. If you are planning on attending please be prepared to share some your monitoring related local information with those present. If you have a lot of information consider a handout. Attendance at meetings has been running 40-60 folks, though Phillies usually draws a bigger crowd. Beginners are especially encouraged to attend. Hope to see you there!

-Happy Scanning - Ted

Hi Dave:

Go to my web page (see my .sig for the URL) and then go to the New York page. I don't have much info, but I do have the Type I fleet map that you'll have to program into the Trunktracker.

>without the computer connection.

Whoa! I was initially talking only about autoprogramming. If you want to compare other capabilities of the CE232, then you have to compare them to the OS535 or OS456 (the lite version isn't an apples-apples enough comparison).

Also, you seem confused about what the PROgramit and the Opto boards do. You can only run interfaces when the PC is on, obviously. I don't understand why you think you have to install the PROgramit so you can use it elsewhere. Just program the scanner and go.

If you want to compare the other features of the CE232 to the Opto, then you must also take into consideration the available software. For the CE, there's yours and the oldie-goodie. For the Opto, there are dozens. None on the market compare to Probe, IMO, and that's a DOS program! For me, the Opto is a far superior interface, not only for the available wealth of software, but also for it's basic capabilities and a few "extras" like cellular tuning in the older models.

Sorry, you won't convince me that the CE232 and ProTurbo is what I need. The OS535/Probe and Programit setup wins hands down ***for me***. Others? Well, their mileage may vary.

6557. WANTED: Uniden BC9000XLT Base Scanner

Newsgroup: rec.radio.scanner
Date: 1998-09-21 00:00:00 UTC
From: bagosh3@hotmail.com
Message-ID: <6u5nnt$a5$1@nnrp1.dejanews.com>
Source record: 143493

Hello. I have a Radio Shack PRO-43 handheld scanner that I would like to trade for a Uniden BC9000XLT base scanner. My PRO-43 works 100% and is a 9/10 cosmetically. It comes with the original box, original packaging, rubber duckie antenna, RS telescopic antenna, belt clip, owners manual, AC Charger/Power cord, and a full set of rechargeable Ni-Cad batteries. The only expectations that I have for the BC-9000XLT is the following:

-Must Work 100% And Be At Least 7/10 Cosmetically
-Must Come With The Manual
-Must Come With Some Kind Of Power Cord

Anything other then that is extra. Please let me know if you have a BC9000XLT base scanner that you would like to trade for my PRO-43. Thanks a lot for reading!

Please state where it says ANY FORM of communication required to save lives.
I have already written the part here on the NG and I sure don't and also the
FCC doesn't. Please show where ot is stated as you have written.

>Regards,

But as stated here on the NG it does not state that an amateur could transmit on police frequencies. Part 97 relates only to amateur radio and does not give you the permission to transmit on other frequencies other that ham.

Hey Jeff I think this Mickey guy needs to go back to school and learn to comprehend the English language.

Does he relaize that part 97 is not the only regulations pertaining to radio.

Part 97 is not a blanket coverage for all the radio spectrum, only for "AMATEUR RADIO" .

Before you quote the law, look it up.
In some states, sex between consenting adults is illegal unless they are husband and wife, and in the privacy of their own company.

But regardless, read Heir Klinton's Executive Order on Ethics. He violated his own executive order.

Any man who says that oral sex is not sex is either the stupidest man on the planet or a LIAR. In either case, he shouldn't be the president of the United States.

If you don't try the program how can you decide you could not
make an evaluation of it without running it. My wife does the same
thing with movies if she doesn't like the first 5 minutes it is not
worth watching. You have to give it a try to decide.

>minute sessions wasn't worth the trouble so I never even gave it a try. I
>can understand the need to have some limitation on it's free use but if it
>gave me enough time to thoroughly evaluate it I'd be more inclined to check
>it out. If it would run for 24 hours just one time, or expire after some

24 hours would be great and when it is done people can just reinstall
the program and get another 24hours and do it over and over again,
sure we could hide something in the registry to make it so that it
will no longer run even after unistalling and re-installing it and it
still won't run, but why mess with the registry like that when it is
not needed. There are all kinds of ways to do it but the one we used
seemed to be the safest

>number of days, maybe I could run it long enough to feel that I couldn't live

I don't believe the 20 minute minimum is too little, but a
24hour limit would be great, but if you start the program and
something comes up and you forget that it is running then you can
easily use up your time. I have downloaded software that has had a
number of days timeout and installed it and had a quick look at it and
other things came up and I forgot about then when I thought about it
again it would not run because the number of days had gone by. We can
talk about limitations all day long and never find one that would
satisfy everyone but this is the one we took.

>without it. I'm running a 300mhz system so I would expect that my timeout
>would be on the short side. I just don't think that 20 minutes is enough time
>to become familar with it.

Your 300mhz system has nothing to do with the timer and will not make
it run at a shorter time, 20 minutes on a 33 mhz machine is the same
as 20 minutes on a 450mhz machine, but that has now be changed to
just 60 minutes no more and no less

Download the latest version and give it a try.

Now don't get me wrong here, I am not saying that the Opto
boards are no good I am trying to point out that they will not work
in all scanners and for some the CE232 is the only way to go.
Pro-Turbo is for the people out there that have the CE232 and want
windows software for it and for those that want the CE232 for whatever
reason they have and have not because the did not want to run dos
software for it.

>program the scanner and go.

As I understand it you have to install the Programmit in any scanner
that has an OS456 or OS535 to program the scanner. The Opto
interfaces take over the scanner and bypass the controller and memory
in the scanner. So I don't understand how you can use the Opto board
and Probe or any other program to program the scanner and use it
elsewhere.
>
>If you want to compare the other features of the CE232 to the Opto, then you

>superior interface, not only for the available wealth of software, but also for
>it's basic capabilities and a few "extras" like cellular tuning in the older
>models.
>

You are back to the OS535 again and comparing it to the
2004/5/6 scanners, if you have a 2004 and want computer control you

have to go with the CE232 the OS456 or the OS456 Lite will not work in this scanner, the OS456 is no longer available. It may have given you extras like tone decoding and such but since you cannot get one new and few people will part with a used one we have to compare the OS456 lite which will still not program any 2004/5/6. Cellular tuning has always been available in the 2004/5/6 scanners so installing a OS456 does not offer this advantage to these scanners.

>Sorry, you won't convince me that the CE232 and ProTurbo is what I need. The
>OS535/Probe and Programit setup wins hands down ***for me***. Others? Well,
>their mileage may vary.
>
I am not trying to convince you that the CE232 and Pro-Turbo is what you need. Sure I would love to give all that a try, in fact I held of on getting a CE232 when I heard about the OS456 because it sounded like it would do so much more, but since it will not program the scanner and will not work with the 2004, I have now gone this route.

on
>the planet or a LIAR. In either case, he shouldn't be the president of
the
>United States.
>

Clinton is speaking from a LEGAL
perspective, where religion and
pathos are allegedly benign

he's speaking from a legal
point...sex between consenting adults
in D.C. is legal.

the grand jury kept harping on sexual
relationship based on intercourse.

...a head job is and yet it ain't. Not
as how it's defined in the books where
sex is criminal...go figure. But then
the GRAND inJURY-ious is defining it
to suit their goals.

Clinton is asking for them to consider
that what he does qualifies as a "quickee"
"almost" sexual relationship and not the
full twelve-course affair.

don't try putting your definitions in and
your prejudices and your religious jerk-off
thoughts in to the equation...

remember: in law what is defined in one
book is not nesessarily how it's told to
the judge...or jury.

also, remember, Clinton is being denied
due process of law by this grand jury
witch-hunt. He's been denied the right
to face his accuser. No cross-examination.

and yet now they can "air" his point of view
as if it was a trial unto itself....no trial
has taken place and it never will. If it
does take place, Lewinsky will lose ... BIG.

her and TRIPP and Jones....

they cannot have a jury hear the case in a court
of law. That's why they are rushing it through
as now...so they can keep control of it until it
goes to the impeachment nomination process...at
which time more will be made available. Against
Clinton. But no trial.

Congress is making things up as it goes: they
want Clinton out. Nixon got impeached. So now
it's the Republicans who will get their revenge.

Politics.

bill conduit
etc.

>deal
>>with him and I don't trust him! Never have, never will!
>>
>>
>> <snip snip>
>>

which country has a white faced pan to fry with?

are not all of them black as black is given?

your idea is rather short: how many leaders have
we dealt with who have killed thousands upon thousands
of citizens of their country: China, Vietnam, Cambodia,
Ireland, England, South Africa, Most of Africa, Cuba,
Peru, Brazil, Argentina, Mexico, Saudia Arabia, Sudan,
Corsica, Turkey, Russia, etc.

are you kidding or just not getting your mind-full
based on the comics you read each time you sit on
your brain cell?

how many of them do similar acts but based on more "criminal"
kinds. How many of these leaders cut off the CLITS of the
women in their country? We deal with them. Or how many of
these leaders kill female babies when born? We deal with
them.

HEY...the President of the USA stands as a novitiate compared
to the barbarians in countries named above...and more.

He's a virgin compared to their "assaults" upon woman-kind
in their countries...

Clinton's was consensual. They agreed. And it was a quickee.

bill conduit
etc.

remember: other presidents have had longer sexual liasons with females who consented. kennedy, hamilton, washington, adams i think...Johnson, and a few more.

Lewinsky stalked the PRES. She knew what she was going to do with him when alone. Pre-meditated. She should be on trail for stalking the pres with a loaded "want to".

WOLFPACK10 rose to the surface and offered this morsel....

>I think the fire dept's position and Humphrey's reply to Kali was just
that,
>"a very political statement"

While carefully worded, those are my sentiments. I visit and speak with members of the Amateur Radio an Monitoring community frequently. I even bring hams and scanner enthusiasts down to our dispatch center and let them dispatch Fire and EMS calls on a weekly basis. There are more than a few such people lurking in this newsgroup. I have also been active in getting many of our 3,500 members their "tickets".

>that said nothing and meant nothing.

Your opinion Sir or Madam. Since you did not offer a name or entity, it is difficult at best for any of us to know how much to regard your reply. It is certainly your right to have an opinion though.

>The fire
>dept has lost my support and MY donations!!! Oh, and try and come take my
>antenna down, you'll then need to call the police dept.

Your obvious lack of knowledge on this matter does not dictate such a response. You clearly do not live in Los Angeles (The LAFD is a full-time career staffed agency that is taxpayer supported - as an agency we do -not- seek "donations").

The greatest harm from this matter might come to your own local Fire Department which sadly might rely on donations to provide minimal service. How sad that your fellow citizens might suffer as a result of your personal view of a matter occurring thousands of miles away <sigh>.

I know that neither the amateur radio nor monitoring community at large profess violence against Firefighters. I also know that the OVERWHELMING majority of those who have followed this thread realize that the antenna removal from Khalil's condominium was allegedly performed by the HOMEOWNERS ASSOCIATION and/or the MANAGEMENT COMPANY [emphasis added].

The Fire Department did *not* physically remove any antenna's. Oh, and by the way - you needn't worry about us being on your roof - unless your house is on fire! <g>

Whether justified or not, you are welcome to hold a grudge against our Department. Just make sure that you know the facts.

Yours in Safety and Service, and speaking personally....

Brian

Yes but the 232 will do much more than the programit will on certain scanners. Autoprogramming is not the whole enchilada. On some scanners , we would like to take advantage of a two-way interface , so that the computer can also get/display information FROM the scanner. I don`t recommend the 232 for a scanner you just want to autoprogram. I also do not recommend it for a scanner where you cannot implement a two-way interface. The programit will do just fine on these scanners. comparing the Programit to the 232 is like comparing apples to pine cones.

As for the Optoscan line of interfaces, they always were fine equipment, but sometimes they lack the versatility of the 232, with all of it`s extra data lines that are user-programmable for just about any function you want to devote them to. Some like the Optoscan, and their opinion is very valid.

Message-ID: <6u6aem$an5$1@news-1.news.gte.net>
Source record: 143515

I found the frequencies. Saturday and Sunday they were on
155.94 then monday morning they switched to 158.94. I guess they
rotate? a county passenger pickup program is on 155.94 now.
I guess they just rotate the frequencies weekly to fight publication
of them? I wonder what frequency they will be on next week :)
they do seem to be on the common "p.g. govt'" listings of channels
though,

I received various frequencies to check, and the fcc website to go
through, I ended up putting about 52 frequencies in my scanner to
scan. I started to just enter them, then I realized i might get some
duplicates, so I put entered them into excel and sorted them.
then I entered them into my scanner all at once.

so it wasn't too hard to find, I was just being thorough.

I want to say thanks for all the help I received here. I received
about 6 replies (and 10 spams but that's ok <g>).

Thank you sincerely,

Daniel

Mike,
For programming purposes for the Pro-2022, I would suggest
that you go with the PROgramit interface. It would be cheaper for you
to build and parts are readily available. Setting it up for your
scanner is much easier also. Serial and parallel versions are
available. You can also add remote control ability to your scanner
later with the IR module.

Check it out and get the parts ordered:
http://www.qsl.net/ka2pyj/

I found this old crock at a yard sale and couldn't resist buying if for $3.00.
It appears to work very well. But I need some info on it.

I was wondering how old it was. It has the appearance of 1970's early 80's???

Does anyone have a listing of frequencies it can receive?

Any quirks?

I plan to clean it up a bit place it in with my other scanners or maybe use it
as an auxilary unit in the garage when I am working out there.

thanks

experiencing interferance when i have 2 scanners on at the same time. when one locks on a channel, the other opens a channel (different freq) as an open mic/open mod.

any ideas?

Check the other channels to make sure they are not locked out.
The electronic systems in your car may be generating signals
which interfere with your reception.

Don't start your car's engine while your scanner is powered on.
Turn off the scanner first.

6602. Re: PROgramit Interface

Newsgroup: rec.radio.scanner
Date: 1998-09-21 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <360aa037.4276979@news.iaw.on.ca>
Source record: 143546

Yes it is true the PROgramit will work with more scanners than
the CE-232 does, but the PROgramit is still only a 16bit application,
were as Pro-Turbo is a full 32bit application. Also I am not sure of
the cost of building the PROgramit interface but I believe it to be in
the $30-$50 range with the par port version at the lower end of the
scale and the serial port version at the higher end. My ce-232 was
built for $60 Canadian and that was using parts that we ordered from
the USA and parts that we had in our junk boxes.
Also there is the same amount of work to be done inside the
scanner for either interface, so if you have a Pro-2004/5/6 you may
want to have a look at the Ce-232 interface and the new Windows bassed
software for it called Pro-Turbo which can be found at
http://www.iaw.on.ca/~jabba/pro-turbo.htm

Thanks
Len

In defense of Mr. Humphrey, I must say that he has always been a very helpful and informative representative, going far beyond the scope of his duties in helping out the scanning community. How many public information officers do you know that would give out all of the FD freqs (and related tags). We do not know that this story is true, we have yet to hear all of the facts, and even if it were to be true, it would be an isolated incident brought on by a few rogue individuals, not a citywide policy. I have always found the LAFD to be very fair, very competent, and often very heroic. Please do not judge an organization you know nothing about (or have no experience with, Mr. Maine InternetWorks) based on a newsnet post. At the worst, Mr. Humphrey has been put in a very precarious position, and his job is to defend the LAFD in the best light. Please treat him with the respect he deserves, and treat our fire department as a whole with that same respect. Hear all sides before you judge.

Although I agree it is a good antenna, it does not lend itself well to the
portability of this radio.

I have compared the Rat Shack antenna to the Diamond RH-77 that I use on my
Yupi 7100 and like the RH-77 better because of size and ease of use.

So I guess I am asking more about portable antennas, and if there are any with
an SMA connector.

Both of these scanners are, well, less than optimum (they are pieces of shit).
Look for a 9000XLT or 895XLT instead. The 8500 is deaf, and the 890 has more
images and intermod than any scanner I've ever used.

Why is it that Video is transmitted as an Amplitude Modulated signal and the Audio is transmitted as a Frequency Modulation signal yet it seems to me that the Audio portion of a TV signal will travel farther. Here I thought that FM did not travel as far as AM.

The test case has already been. Here in San Diego a couple years ago.
The FCC took the HAMS HT for using it to call for help on the Sheriff
freq's.

Can't remember if they actually prosecuted but it was written up in QST
and others.

Actually, in that case, it was the Sheriffs office that confiscated
the radio, in exchange for no prosecution.

The FCC was present, but the Sheriffs office did the deed.

Video is several signals spread over a 6MHz bandwith. The audio (FM) has a devation of (I forget exactly) of something like 15khz. Yes, the only practical way of doing it is to buy one of the high end recivers from the likes of Icom with a video output. They are expensive, you will never do it with a simple scanner.-James

Bud anyone who hollers bullshit usually doesn't deserve any further reply.
I suspected CE-232 was a serial device but I wasn't sure. One can hang that off the USB bus with an USB/SERIAL adapter for years to come if needed.

But in patience I will direct you to the press releases last week from Intel and the various speechs at a major conference on PC chips. This was where Intel revealed they are cutting the prices of the P2 by up to 29% immediately and where they detailed how the new instructions will work in next years chips.
IDE, ISA, Parallel, Serial etc. are all being discontinued in the new design reference. The total architecture of the PC as we know it is undergoing a fundamental change to get away from the legacy outdated IBM design we have had for years. One benefit is faster, cheaper, and more versatile PCs do to appear in the next two years. One wit said soon people will no longer want the type of PC we currently use and will wonder what we saw in them. We would be further along in this cycle except Microsoft delayed Win 98 for so long and they are delaying the replacement to Win 9x. which will be a consumer version of NT.

You may hate it and I am sure there are a few people who will bitch and shout just like they did when socket seven was discontinued. Look at how the socket seven market has shrank to almost nothing in just a few months. I thought it would take years. Look at how DOS died out. The justice department was asked to investigate Intel. But it doesn't stop a thing to fight change. BTW I switched to slot one on a BX mainboard and followed other suggested changes and I definitely see the benefits.

Anyway there are more appropriate groups where these are discussed and followed. When you get a chance you might bring yourself up to speed by checking it out.

Some of these 2004 scanners came through with bad solder joints on the board from the factory. The strange part is, that the problem sometimes does not show up for quite a while eventually corrosion in the solder joint finally breaks the contact. Hard to find.

Well you're right about that so I won't take the time (here) to do a Swiss cheese number on your faulty logic. The reason you brought up the whole ISA issue was a patently lame attempt to snipe at the CE232, which everyone knows is Cheek's interface. Your pretending to not know that it is a serial interface is both disengenuous and laughable. As always, you're just looking to bust Cheeks chops.

I have never been a fan of that particular interface and believe there are superior alternatives and I have said so here many times. Unlike you, I have posed a number of valid, although arguable, reasons that I believe this is true.

If you are interested in a good used 2006, Bill Cheek has run into a few of them that are going to be sold very resonably.

A local TV statin had a bank of them set up for "test gear" and the logo has been removed from the front, but these are in very good shape. They are pristine as far as mods go, they were never touched. Contact Bill at :

bcheek@cts.com

To enquire about/order one of these

>From: jabba@iaw.on.ca (Len G. Carpenter)

>Yes it is true the PROgramit will work with more scanners than the CE-232 does, but the PROgramit is still only a 16bit application,
>were as Pro-Turbo is a full 32bit application.

Well that's not much of an issue if all your doing is autoprogramming the scanner, now is it? I can load the PROgramit program with freqs from Percon, Probe etc. in only seconds and then jam them into the scanner as fast as the scanner will allow. It takes a minute or two to load 1000 freqs into my PRO2042 (I don't recall how long exactly since I haven't had to reprogram all of the channels in the scanner at one time).

>Also I am not sure of the cost of building the PROgramit interface but I believe it to be in
>the $30-$50 range with the par port version at the lower end of the scale and the serial port version at the higher end.

>My ce-232 was built for $60 Canadian and that >was using parts that we ordered from
>the USA and parts that we had in our junk >boxes.

The initial claim was $12 for the serial version, although it is probably closer to $20. The CE-232 interface is considerably more than that (and I'm assuming that you are referring to the Commtronics interface and not one that you have devised and appropriated the name).

>Also there is the same amount of work to be done inside the
>scanner for either interface, so if you have a Pro-2004/5/6 you may
>want to have a look at the Ce-232 interface and the new Windows bassed
>software for it called Pro-Turbo which can be found at
>http://www.iaw.on.ca/~jabba/pro-turb

That's true, but it's the end result that matters. I have the PROgramit and the OS535 running Probe 3.0 and there is no other combination for the money that comes anywhere near its flexibility and performance.

ISA
>>is going the way of the dodo bird right now.

You know, Mr. Healey, maybe you should READ THE POSTINGS about the 232 BEFORE you make inane comments that prove conclusively that you DIDN`T read them. The 232 DOES NOT PLUG INTO A SLOT IN THE PC. The only thing required on the PC end of this hookup is a serial port. If you are on some sort of "crusade" against Winradio or ICOM, then please confine yourself to those products. Your credibility is seriously slipping here, simply because you must go off half - cocked all the time and babble inanities when you have not taken the trouble to learn ANYTHING about what you are talking about.

The venerable parallel port is not going anywhere, and will be around for the forseeable future. As a matter of fact, it has undergone several improvements in the recent past, (ECP & EPP) , that make it more than fast enough to keep up. The newer computers bus master the parallel port, which makes it AND the processor a good bit faster than in previous computers.

>If pieces of antenna were still on scene it would be clear to police
>that a criminal act took place (even if only a misdemeanor case of
>mischief). No police officer would call it a civil matter.

According to Khalil, the Los Angeles Police Department did. That agency is astute, and I am not one to second-guess how they cam to that conclusion.

I earlier explained...

>> LAFD was not party to such action. It (the HOA action) was not a matter
we
>> were aware of, so we could neither condemn nor condone what took place as
it
>> was happening.

To which "tree" responded:

>The poster said that the LAFD told him so.

It might be a good idea for you to re-read the copy.

>Why would the FD not condemn
>such an action as criminal?

Had we been there to witness the actions, we *might* have tendered an opinion. We were told about the incident long after the fact and after the Police Department had been consulted. For obvious reasons the Fire Department does not tender a formal opinion on pending civil or criminal matters.

An example: Our Firefighters and Paramedics pronounced Ron Goldman and Nicole Brown Simpson dead after they were stabbed to death near her condo in Brentwood. While I could have gone on record to describe the carnage, it was not appropriate pending the outcome of the trial.

FYI: Such a stance is routine among Public Safety agencies in North America.

>We are not talking about your involvement in the issue only the facts.
>People "telling me" or "I believe" are not facts.

You are right. That is why Khalil has been directed to seek legal counsel in his civil proceedings against the HOA/Management Company.

Stay Safe!

Yes, you should see roughly 52 ohms. But, do you mean in the antenna, or across your antenna jack contacts on the scanner itself? You should not have continuity between the center and ground in the radio, but you will on the antenna.

If you still suspect the antenna, try another one to see if reception improves.

Hello,
Name is Jeff. I'am looking for info and documentation on an old 16 channel programmable scanner. It was produced in 1974 by Tennelec Corp. from somewhere in Tennesse. It is 16 channel with individual lockout switches and is programmed via 3 switches on the lower right front, they are marked program, 0(zero), and 1(one). The rig was given to me by a gentleman that purchased it new. It apppears to work but I have not figured out how to enter frequencies and he does not remember or can he locate the documentation for it. He does remember the manual consisted of 4 to 6 pages of operating info and 30 to 40 pages of what he called frequency codes? Any help would be appreciated. I can be reached at clingan@network-one.com.

>2002 THAT WAS CONERTED BY AOR JAPAN BUT HAD NO FURTHER INFO CAN SOMEONE
>OUT THERE PLEASE TELL ME HOW TO PROGRAM AND INITIATE SEARCH WITH THIS
>THING? ITS DRIVING ME CRAZY!

The AR2515 started life out as an AR2002 - probably still says that on the plate on the back. ACE Communications were the then importers of AOR Equipment and the AR2515 was a product that they developed.

Using the AR2002 receiver they changed the CPU/logic board with something they had worked on that gace the AR2515 its large memory and fast scanning/searching.

In later years the "logic" behind the AR2515 was put into the AOR AR2500 (later to become the Trident TR-4500) which offered the same features together with a BFO for SSB but in a different case and using a different "receiver" to the AR2002 (The AR2500/TR-4500 was manufactured by a different company to the AR2002).

The AR2515 does not have memory channels as such - you have 62 banks of 32 "slots" (1984 channels in total). You enter a frequency into a Bank and it will be added to the bank in numerical order. When the bank is full it will say "FULL". To add additional frequencies to that bank you first have to delete something. Keeping the frequencies in numerical order assisted the PLL in locking up and thereby allowing fast scanning speeds when compared to the original AR2002. The Rotary dial or Up/Down keys will take you through each slot in a bank and display the frequency in that slot

You can Scan one bank or link banks together using the LINK/UNLINK feature.

There were also 16 search banks (Banks 63 to 78) in which you can store a lower and upper frequency to search between. Any mode or step size can be used (Shift+1 for NFM, Shift+6 for AM etc). The Rotary dial or Up/Down keys will take you to the next frequency manually.

The Manual/Scan key starts/stops scanning or searching.

"nn+Sel Bank" will select that particular bank. If the bank number is flashing then it is Unlinked to any other bank whilst a solid display means it is linked with any other similar bank for scanning.

The AR2515 could be controlled via a PC but the only software I am aware of was a package produced by a company called Gesmundo. We might still have the odd copy somewhere and I can probably muster up a copy of the manual if you wish.

You might alos try ACE Communications to see if they can help you at all.

Hope that helps :-)

Cheers,

Read section (c) reguarding the operation of signal lamps on a school bus in Texas.

Sec. 547.701. Additional Equipment Requirements for School Buses.
(a) A school bus shall be equipped with:
(1) a convex mirror or other device that reflects to the school bus operator a clear view of the area immediately in front of the vehicle that would otherwise be hidden from view; and
(2) signal lamps that:
(A) are mounted as high and as widely spaced laterally as practicable;
(B) display four alternately flashing red lights, two located on the front at the same level and two located on the rear at the same level; and
(C) emit a light visible at a distance of 500 feet in normal sunlight.
(b) A school bus may be equipped with:
(1) rooftop warning lamps:
(A) that conform to and are placed on the bus in accordance with specifications adopted under Section 11.12, Education Code; and
(B) which may be operated only during inclement weather when the bus is stopping or is stopped to load or unload schoolchildren; and
(2) movable stop arms:
(A) that conform to regulations adopted under Section 11.12, Education Code; and
(B) which may be operated only when the bus is stopped to load or unload schoolchildren.
(c) A school bus operator shall activate the warning equipment designed to warn other vehicle operators that the bus is stopping to load or unload children, including flashing warning signal lamps, when the bus is

stopping or stopped to load or unload schoolchildren. A person may not activate the warning equipment at any other time.

Acts 1995, 74th Leg., ch. 165, Sec. 1, eff. Sept. 1, 1995.
Amendment by Acts 1995, 74th Leg., ch. 260, Sec. 56

> >Tearing down an antenna is a CRIMINAL ACT regardless of hmeowner
> >association rules.

I'm not sure I understand the situation, but if the owner of the ant. wishes to pursue a perceived criminal/civil act, he should pursue that case in court.

However, as onerous as some homeowner's/condominium associations are, it doesn't appear to be a dark conspiracy against radio hobbyists.

If the owner had mounted an external ant. on a condominium, I'm sure it was matter of violation of covenant/regulation. I'm still the unfortunate owner of a condo, so I'm quite familiar with the rules and regulations governing these community associations. I've even caught heat from the communist association for a 4 ft piece of of friggin' plywood sittin' on my balcony.

I have yet to see a condominium association that allows external ant's to be mounted. The roof of a condo is generally considered to be a common area: In that, when repairs are required, (such as re-shingling) one owner does not simply re-shingle the area of roof over his/her unit. The matters on who and how the repair is performed is decided by the association and the fees are levied at building owners in the form of a special assessment.

Since the roof of such a unit would be considered a 'common area', the association may take action to remove property from such areas if it is found to be in violation with the covenant. It could be interpreted that removing the ant. from the roof by the association would be no different than removing a junked car from the common parking areas.

Is it possible that this describes the situation that started this thread?

> the radioshop for a new shadow key?

No, every radio has a smaller "hash" key which is yet another key. It's
unique to the radio so when the OTAR is sent, it's sent to each radio.
If a radio is lost, they just tell the computer and the radio in
question will never receive the new code.

Oh C'mon, everyone knows that "unsubscripe" requests are processed by
the Department of Defense. Just point your browser at DOD ballastic
missle command and put "requesting nuclear missle launch authorization
codes" in the body of the message. For faster service, sign the
message "Bin (one of your cruise missles didn't go off, we're
returning it by "air mail") Laden".

You're welcome.

Hmmmmm and verrrrrrry Interesting Concept Here.

hmmmm and mmmm

pondering a bit more

flash: it comes from a catalogue or piece
i see here in my throw-it-out eventually pile....

for 195 to 229 you can buy a brand-new 895xlt
with full warranty and free prize....

300 bucks...what do you include with it
to match the offers we see now....does that
include a big MonsterTennae or what? Maybe
a portable scanner to go with it....a special
"two for one" deal from McDonald's...etc.

don't you just love it?

Wonder what a used 895 is going for?

By the way: Radio Shack is selling their
TTRacker based model for 195 bucks...

ah hah. right. ok. i'll go look today.
i'm thinking of adding to my collection.

bill conduit
etc.

>I GIVE UP! IT DOESN'T TAKE ME LONG TO SEE THAT YOU ARE NOT GOING TO BE
>CONVINCED, AND NEITHER AM I, SO THIS DISCUSSION IS GOING NOWHERE!
>

You give up. he gave it up too. So what?

Clinton gave at the office...no.
Was he on his lunch break?
Was he on his way to the tinkle room?

What is legal cannot become illegal just
because you deny it occurred.

That is a religious concept. They want obedience
to their laws and if it's "legal" they will find
a way to make it illegal "just because".....

Religion is not considered in the
issue...it's law. Sex and Religion are
opposing answers to what is real and what
is beleived as real.

You seem to be on the runt end of this. You believe
it is illegal as you are "supposed to"

What is
Just is.
It don't need no god to make it be
what it is...it just exists.
Sex is
Just is.
it dont' need no god to make it be
what it is...sex is what exists
between two opposite bodies. It's
what comes with the body. It's in
the genes.

What is legal is not a crime because it
is as it is: a genetic fact of life which
is enjoyed by people who are adults. For
somone to come in after the fact and call
it criminal because the act was denied is
rubbing the crotch of some religious dictum
that you are stuck in.

bill conduit
etc.

Once again, here is a classic example of a guy who is content to sit on his duff and have other people spoon feed him information. If he had done even a cursory bit of reading of the two nesgroups he would have found the the answer to his question in a post made about two days ago in rec.radio.scanner. Had he bothered to do a two-minute search at www.dejanews.com he would have found this question has been answered several times. And if he had even bothered to check the most obvious place--the Tandy/Radio web site--he would have found that the friggin' manual on-line.

Yeah, I saw the same thing. I thought it was pretty silly. I think that the ad must have been done by some re-seller, not Uniden - at least I'd sure hope that Uniden wouldn't make such a low-class add.

Think for a minute you are trying to defend federal prosecutors (Reno, Starr ETC.) who are of the same mold as those that want to take scanners, guns, our private lives, just about everything we think of as basic freedoms away from us cuz they think some one died and made them God. Why is it right to get somebody on his private affairs, in his residence, remind you that it is his residence even though its US property. He can still have his private life without big brother(or maybe that should read big sister Janet) spying on him and us.

By the way how did we get away from the LAFD issue ? I watched the 4 hours of testimony saw nada on Whitewater or Travelgate only Starrs new screenplay which basically is poorly written.

Just speculcation based upon the statements.
The victim NEVER mentioned in his post that he went to the police.
Seems to me that anyone that angry would not omit a significant item
such as that.

> In many cases, yes. The removal of an antenna can and in many cases is
> unlawful. There are exceptions, but for the most part I'll agree with your
> premise.
>
If pieces of antenna were still on scene it would be clear to police
that a criminal act took place (even if only a misdemeanor case of
mischief). No police officer would call it a civil matter.
>

> LAFD was not party to such action. It (the HOA action) was not a matter we

The poster said that the LAFD told him so. Why would the FD not condemn
such an action as criminal?

> >Does anyone have proof of the action?
>
> Khalil says that he returned home to find the antennas and assorted
> equipment removed/damaged. I believe he says the HOA fessed up, but I am not
> sure. We were busy fighting fires while all of this was taking place.
>
> > or the response?
>
We are not talking about your involvement in the issue only the facts.
People "telling me" or "I believe" are not facts.

I am all in favor of Khalil in this matter - if it is true -if he can sustantiate his comments aboiut the PD and the FD - if he can show that the HOA admitted its actions. BTW-if he was violating some rule of the HOA then there should be documentation of their requesting the antenna removal as well as an "ultimatim" stating that if he didn't they would! In which case he is wrong and they are right - but the LAFD still has no part in the matter.

Try this site. There was a posting on DejaNews about modifying the Pro-64
and 2041. It's a downconversion mod that allows scanning cell phones.
If this doesn't work, try searching "Pro-64" on past DejaNews articles.

This STILL is not a proper cell modification, and won`t cover the whole cell band anyway. The is a virtual downconversion, which doesn`t work all that well.....

Hello everyone!

I have a ICOM IC-R7100 for sale. It is in excellent shape with an auxilary fan mod, computer CI-V interface, manual, and power cords. It has full 800mhz restored. I am asking $800/obo plus shipping. Thanks,

Steve

Howdy's

I am looking for the following, An ICOM IC W-2AT, IC-R-10 reciever, or a Yaesu VX-1r

I have the following items to trade

A like new HTX-202 standard stuff, but no box, no scratches MINT

2 Sharp VHS-C video camera's both same model, one works other doesn't even power on

Will trade all this for any one of the radios mentioned above. I will even pay shipping both ways.

Thanks,
Grego, N8PPZ

>Thanks,
>Ed
>

Not sure what antenna comes with the Q7A.
My T7A came with an Icom FA1443B dual band whip.
I purchased a Diamond RH77B which is about twice as long, but is not noticeably better either for dual band ham work, or general coverage receive.
I tested the two over a period of several weeks and have decided the Icom is the best performer. I also tried various other 'rubber ducks' and even a full qarter wave 2m whip. The Icom antenna outperformed all except the 2m whip, which was great on 2m, but nothing special on the rest of the range.
For an effective, unobtrusive BNC antenna I'll stick with the Icom FA1443B.

By the way I'm not a rabid fan of Icom, had some good stuff and some not-so-good over the years.

Since I'm rambling on here. My PRO43 sits alone on the shelf most of the time since I purchased the T7A. It's smaller, lighter, and the batteries last almost forever - I elected to use standard AA cells and had to leave the rig on for two days to kill the batteries. BUT - It is lousy below 108MHz and although it covers part of the 225-400MHz military band it has no AM in that area so it is basically useless for military UHF AM. Otherwise from 108 to 1,000MHz it's a pretty good toy as long as you are able to get along with only 60 memories and 4 search ranges.

Anyone here in the US tried ordering from Durham Radio in Canada ?

I would like to know if US Custom would intercept a package sent to the US from Canada ? I'm interested in getting the Optoelectronic's OS535 board (un-blocked).

Anyone here had luck ordering from Durham or have a package confiscated by US Custom ?

Thanks...

6718. Pro-2006 Troubles ..

Newsgroup: rec.radio.scanner
Date: 1998-09-22 00:00:00 UTC
From: hillbillyboy67@yahoo.com
Message-ID: <6u7aap$n62$1@nnrp1.dejanews.com>
Source record: 143471

Ok .. here's the situation:

I blew the dust off the ole Pro-2006 and decided to do a little 'searching' in a certain range of frequencies. 870.030 thru 889.980.

When I set it to search in 30khz increments ... I get NOTHING! However - it will hang on some static right at 871.590. If I move it up 10khz to 871.600 - I get a perfect signal.

So .. I get the bright idea to start a NEW search between 871.600 and 889.870 ---- But when I start my search - it begins on frequency 871.620. It won't start with 871.600 like I had programmed into the unit.

I've also noticed that when I manually start with 871.600 - and add 30khz steps (keep in mind .. I'm doing this manually) I can pick up all kinds of good signals along the way... as long as I'm adding 30khz to the new frequency that I punch in.

Is there something wrong with my unit?

Why can't I set it to scan from 871.600 -- and have it go from there?

Why won't it pick up these frequencies in their normal ranges .. 870.030 thru 889.980?

All help is GREATLY appreciated.

thanks!

Source record: 143473

Hey,

I am looking for any interesting information on the new ICOM Q7A mini HT. I have searched DejaNews, search engines, but really didn't come up with all that much info. Although I did find the schamatic for the OPC-782 Plug at <http://www.hamradio.cz/rigs/Dilna/icom/OPC-782/index.htm> There is more info on that page on the Q7A, but it is not in English. I have seen a *REALLY* cool "unofficial" page on the VX-1R, but nothing on the Q7A. Someone should start an "Unofficial ICOM Q7A Page." The only "trick" I have found which is undocumented is you can hold down BAND at power up and the LCD test will run. Hold the BAND button for as long as you want all the characters to be lit up. Anyone got any others? Any comments on getting cellular reception on the Q7A? Images? Possible full band restoration? Please share your thoughts here, and please also email me with them (AOL really isn't the best server, you know...)

Take Care

hi jeff,
I had on of those scanners back in the 70's. First they were deaf as a doornail
(hi hi). they were programed as you say by the 0 and 1 buttons. Now the problem.

If you don't have the book you can't program the scanner. all the frequencies are in the book and the coresponding binary code. It goes something like this:

Say the frequency is 33.00 mhz. you would insert the code by the buttons
0000 1000 0110 1010 . so if you don't have a book you are up the creek.

I just saw one at a hamfest for $15.00 but no book.

If you can find a book, your in business!

good luck
dane nr3n

I am also a volunteer firefighter and I commend andy for his post. It is just common sense for an emergency vehicle to stop for a school bus w/flashing red lights. As andy pointed out, you can't be sure if the kids getting on or being let off are high school or kindergarten students. Yes, the school bus should hopefully allow the emergency vehicle to get by. Keep in mind that alot of people tend to put their brains on hold when they see emergency vehicles responding code 3. In my experience this is especially true for emergency vehicles with red lights. It seems that pretty much everyone will get out of the way for a vehicle with flashing blue lights, but if they see red lights they're not as concerned since I guess they reason that a fireman isn't going to give them a ticket.

Well, they did it again.

My friends at Code Three Collectables have asked for a new list of Fire and Police Services which utiltilize the GMC Suburban.

Some of you know that I posted this question to the group before, and was deluged with the response. A list will be submitted to them in order for them to consider new scale die-cast vehicles in the future.

If you can please post or email all the agencies you are aware of that utilize the GMC Suburban, I would appreciate it.

Thanks in advance.

The on-line version is a pretty sorry excuse for a manual.
Much of what is in the printed manual is totally missing.
The only thing it has that the printed manual does not have
is the exploded view and parts list. The best that can be
said for it is that it is better than nothing.

Compare this to the disk drive manuals that Seagate and
Quantum have on-line.

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

>>For sale: AOR AR5000 Cyberscan professional scanner

>Does this unit have a serial interface?

It's got an RS232 and a ton of other features. You can read up on it a www.javiation.com and probably several other sites.

There's a slightly enhanced version called the 5000+3 with synch AM for better SW, auto freq control and noise blanker. Not sure of the price difference for the newer version--it's not much, I don't think.

They're selling for $1825 to $1900 in many places. That puts it head-to-head with the Icom IC-R8500, which is the model that I buy when I win the lottery.

Kids must have been dumb in Illinois back in the 1960s. I remember being taught around 1964 that you were not allowed to pass a school bus with its STOP flag out or its lights flashing. The only exception was that if you were on the other side of a divided highway. YCLIU. This dumbing down, at least in Illinois, probably goes back to the Eisenhower administration or earlier.

I apologize for injecting a real fact into this heated, irrational, political argument.

6775. FCC Radio Service Rules ?'s

Newsgroup: rec.radio.scanner
Date: 1998-09-23 00:00:00 UTC
From: shaun sandoval <scsando@wazoo.com>
Message-ID: <3609C688.1760@wazoo.com>
Source record: 143328
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.swap

I have glanced through my FCC rule book and still do not have a definate answer, and hopefully someone out there can help me.

Ok, question one. We have a frequency listed as service code IW and it is licensed as a fixed site, 10watt, pump telemetry system, at 173.2625 MHz. The license is still valid for only those parameters, but we no longer use that frequency in the system. Can we go ahead and use the frequency secretly as a sort of car-to-car channel in our 45watt mobiles and 5 watt portables throughout the town to talk to each other so no one hears us and also use it as the channel at another permant fixed site 30 miles away, also at 45 watts, so we do not have to go through the process of obtaining a new PL service frequency???

Question two. We have another frequency legally licensed as a repeater with output of 100 watts, frequency of 155.8200, and service code PL. This is the primary frequency we use locally. Can we legally use this frequency in the direct (talkaround) mode at another permant fixed site about 60 miles away, at 45 watt mobiles and 5 watt portables, in another county for 7 months out of the year?

Question three. Can an authorized user on our primary repeater, program our frequency into his personal radio and use it only during business hours so he doesn't have to carry our portable and his other jobs portable at the same time, without never obtaining our permisson. I say it was not right, but not illegal, maybe someone can help?

I hope anyone can answer these questions for me. I was gonna call the FCC, but just haven't gotten around to it and didn't find anything about in my book, probably because I need a better book.

Please just e-mail me back and thanks a bunch.

The SONY SC1PC is available NOW and it's an interesting
radio. The one I tested was a good performer, though the
keystroke sequence is eccentric.

I published a review in August 1998 Monitoring Times magazine.

From the FAQ:

SC1PC: 1998 vintage. Good RF and audio performance. Covers
25 - 1300 MHz, minus cellular phone. Selectable step size
and mode. Computer control and downloading with software
and PC cable provided. Powered by ordinary AA batteries.
Provided CDROM includes both the scanner control program and
the multi million record PerCon FCC license database. 10
banks ("pages" in SONY parlance) of 30 channels each. Per-
channel 2 second rescan delay. Unlike the ICOM IC-R10, you
can scan any combination of memory banks. You can lock out
("skip") memory channels from scanning. The frequency
stored in a skipped channel will also be skipped during
searches. One priority channel checked every 5 seconds.
SONY's limit search is restricted to one pair of search
limits, though computer control expands this to 20 linkable
pairs. Band search lets you search through 17 bands
programmed at the factory. Service search. A cache, termed
Intelligent Memory, stores the last 10 unique frequencies
that were active for longer than 5 seconds each. IFs (in |
MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, |
and 0.455. See "The SONY SC1PC," by Bob Parnass, AJ9S, in
Monitoring Times, August 1998, for a review which includes
quantitative test results.

Incomplete is a MILD understatement. The only way I have found to
flush my 2006's (gots 7) is as follows:

Unplug radio
Remove backup battery
Press switch in rear panel (in the teensy tiny hole) a couple seconds
Power radio and check.

Good Signals... LCM

Hello,

I have an AOR AR2500 scanner for sale. It has 2016 channels, covers from .5~1500 Mhz. Full 800 MHz, AM, FM wide and narrow, and a BFO for SSB and CW. I have the Scancat computer controlled software for it as well as the manual, power cord, and mobile mounting bracket. It is in excellent shape and I am asking $325/obo plus shipping.

Thanks,

Steve

It's known as "the dumbing down of America." Instead of teaching children
how to get off the bus and cross the street safely, our public schools
are teaching children that "Johnny has two (homosexual) dads."

Public Safety Officers must "shut down" when near a school bus because
children are not taught to interpret sirens and flashing lights (code 3)
as warning devices.

STROM-MARTIN SCHOOL BUS SAFETY BILL GETS NOD FROM THE ASSEMBLY TRANSPORTATION COMMITTEE

SACRAMENTO -- Assemblymember Virginia Strom-Martinï¿½s clean up legislation for the Lanni School Bus Safety Act was given the vote of approval by the Assembly Transportation Committee today.

AB 2375 allows the local school district bus drivers to transport students more safely. Strom-Martinï¿½s legislation creates certain exemptions to the 1997 Lanni Act, which school buses to turn on their flashing red lights whenever students exit a school bus. Traffic in both directions is required to come to a stop until the flashing red lights are turned off.

In some instances, strict compliance with the Lanni Act actually creates a more dangerous situation for motorists and students.

ï¿½Because of certain road conditions and locations, it can be even more dangerous to require traffic in both directions to stop when students unload.
Last yearï¿½s law was aimed at curbing potential dangers to students unloading buses.

I introduced AB 2375 to further the spirit of that law and address the specific safety concerns of parents, school administrators and board members,
as well as the California Highway Patrol. This legislation will help the school districts to comply with the intent of the Lanni Act and also provide the safest possible environment for their students,ï¿½ stated Strom-Martin.

ï¿½Many legal bus stops were eliminated along rural highways throughout the state because of the threat of increased rear-end accidents and collisions. This action resulted in children being forced to walk further distances along
these highways where truck traffic is heavy,ï¿½ explained Strom-Martin.

My office and those of my legislative colleagues were inundated with urgent pleas from parents to do something before a child is hurt.ï¿½

AB 2375 would provide exemptions to existing law for bus stops on a divided or multi-lane highway. It would further exempt conditions where the roadway surface is covered by snow or ice, where a school bus is broken down or when students require more time to board or exit the bus.

Finally, it exempts loading zones on or adjacent to the school grounds. In addition to the specific waivers, AB 2375 will allow school boards will be able to seek waivers for other bus stops they believe would be more dangerous if the bus activated its flashing red lights.

CALIFORNIA CODES
VEHICLE CODE SECTION 22454-22454.5

22454. (a) The driver of any vehicle, upon meeting or overtaking, from either direction, any schoolbus equipped with signs as required in this code, that is stopped for the purpose of loading or unloading any schoolchildren and displays a flashing red light signal and stop signal arm, as defined in paragraph (4) of subdivision (b) of Section 25257, if equipped with a stop signal arm, visible from front or rear, shall bring the vehicle to a stop immediately before passing the schoolbus and shall not proceed past the schoolbus until the flashing red light signal and stop signal arm, if equipped with a stop signal arm, cease operation.

(b) The driver of a vehicle upon a highway with separate roadways need not stop upon meeting or passing a schoolbus which is upon the other roadway. The driver of a vehicle need not stop upon meeting or passing a schoolbus when the schoolbus is stopped at an intersection where traffic is controlled by a traffic officer or official traffic control signal, or when the schoolbus is stopped at a place where traffic is controlled by a traffic officer or official traffic control signal.

(c) (1) If a vehicle was observed overtaking a schoolbus in violation of subdivision (a), and the driver of the schoolbus witnessed the violation, the driver may, within 24 hours, report the violation and furnish the vehicle license plate number and description and the time and place of the violation to the local law enforcement agency having jurisdiction of the offense. That law enforcement agency shall issue a letter of warning prepared in accordance with paragraph (2) with respect to the alleged violation to the registered owner of the vehicle. The issuance of a warning letter under this paragraph shall not be entered on the driving record of the person to whom it is issued, but does not preclude the imposition of any other applicable penalty.

(2) The Attorney General shall prepare and furnish to every law enforcement agency in the state a form letter for purposes of paragraph (1), and the law enforcement agency may issue those letters in the exact form prepared by the Attorney General. The Attorney General may charge a fee to any law enforcement agency that requests a copy of the form letter to recover the costs of preparing and providing that copy.

(d) This section also applies to a roadway upon private property.

22454.5. Notwithstanding Section 42001, a person convicted of a first violation of Section 22454 shall be punished by a fine of not less than one hundred fifty dollars ($150) or more than two hundred fifty dollars ($250). A person convicted of a second separate violation of Section 22454 shall be punished by a fine of not less than five hundred dollars ($500) or more than one thousand dollars ($1,000). If a person is convicted of a third or subsequent violation of Section 22454 and the offense occurred within three years of two or more separate violations of Section 22454, the Department of Motor Vehicles shall suspend the person's privilege to operate a motor vehicle for one year.

I would think that if you ordered a device that can intercept cell calls
you would unfortunately violate US law. It seems that US law forbids the
importation into the US of such devices. You might be risking more than just
losing your order.

The market itself... Advertisers pay for the programming.
Since the station is free, there are likely to be more viewers.

The new sets (some already on the market) are digital compatible. By the year 2007 the only thing TV stations will be broadcasting is digital and all TVs will receive all stations just like they do now. By the year 2002 all stations are required to be on the air with digital but will simulcast both analog and digital until March 1, 2007.

When is it HONORABLE to cheat on your wife???

All this aside, it really doesn't matter, and I could care less. By focusing
on
the affair(s), we are forgetting about all the other stuff he has done while
in office. Americans, particularly the media, have a very short memory.
Perhaps this is all just to help you forget the previous wrong-doings?

What the h**l does all this have to do with scanning anyway? Did the LAFD
take down all your antennas so all you left to do is this crap?

While attending school in 60s through 70s, I do not recall being taught in school the meaning of red lights and siren. My parents taught me those concepts therefore, "dumbing of America" really begins at home.

An observation made while working as a street level cop in middle America, baby boomer parents would often shift total responsibility for educating their children upon school, law enforcement and other public officals. The reasoning behind this was they had shifted responsibility for their children's actions or accidents as well. The lawyers perpetuated this concept into a multi-million dollar industry.

Additionally, end responsibility for child safety while being transported in a school bus lies directly upon the school's transportation board. As cop, I observed many times school bus drivers not paying attention to their duties, i.e. students standing in line at the door prior to the bus stopping, coming to an immediate halt and flinging the doors open without observing traffic flow, etc.

When Johnny get squashed by a motorist, immediately state legislators creates laws for two reasons 1) to shift blame from school transportation boards in the event of future law suits and 2) to look as though they are doing something to "save the children".

As far as devient behavior by children today, they learn it from the baby sitter, the TV. Just watch some of the junk on cable or the FOX network. If children are learning homosexual topics, it comes from the wierd commericals where the generation X concept is exploited to the max.

Like I state earlier: "dumbing of America" really begins at home!

In Virginia, an emergency vehicle with its lights and siren on approaching a stopped school bus loading or unloading children, with its lights flashing must stop.

I was an officer on a firetruck responding to a call when that exact thing happened. We approached from a fairly long straight section of road, lights, siren, and airhorn activated, the bus approached his stop, turned on his lights, and we had to stop, which we did. It delayed our response to the situation.

When I returned to the station from the call, I made one phone call to the school board and talked with the person in charge of the school buses. I was not angry or threatening, however I did make it clear I thought the School Bus should have pulled off the side of the road, and motioned us on. The manager of transportation agreed 100% with me and said the school bus driver handled it poorly and would be counselled.

I would agree that going past a school bus, on the way to an emergency, that was loading or unloading high school kids would probably not be a hazard. I would think by this age, the kids should be mature enough to realize the danger of emergency vehicles. However, on the other end of that spectrum, a 1st or 2nd grade child, can easily get confused, or excited at the sight of a firetruck going by and step out into the path of danger. I can't think of any emergency I have ever responded to that was worth a childs life.

There HAS to be some sort of standard in these situations, so err on the side of safety and make the rule, NO PASSING OF ANY SCHOOL BUS UNDER ANY CONDITIONS.

Had the driver of the fire engine I was on that day, proceeded past the stopped school bus unloading those kids, he would have been guilty of Reckless Driving.

Source record: 143376

In the 2006 manual downloaded from the Tandy site:

"To clear all the memories, be sure the scanner is turned on and:
1. Press and hold [CLEAR]
2. Using a pointed object, press and release the restart switch.
3. After confirming the display goes blank, release [CLEAR]"

This information is buried under the heading "USING THE RESTART SWITCH"

Certainly would clearer if it was under a heading called FULL RESET but then
Tandy doesn't expect anyone to RTFM.

Cheers,
Paul

He didn't say "a fair/reasonable or market price", he said "a good
price". I think the $10.00 I paid for mine at a recent garage sale
(missing the $10.00 antenna...) was a _very_ good price.

Now if only I didn't live in a hole where the only signals come in from
a 20 degree angle to the southeast... :)

Nope, it is not legal even to listen, even if you do not disclose
anything. Probably one of the most stupid laws on the books. If you do not
want to be heard, buy a digital spread spectrum cordless phone.

Evenin'

I must say that is profoundly idiotic (whether it be law or not)
or an emergency vehicle to STOP simply because a school
bus has its red lights flashing.
The emergency vehicle has its lights/sirens going for a -reason-
namely.. an emergency.
I agree that a <10 year old might panic and run into the EV, but
why not teach the bus DRIVER the importance of holding a child
back if s/he sees an EV approaching? Common sense -should-
tell them that it is an emergency, more likely than not life threatening.
If normal traffic has to pull over on the side of the road when an
EV is coming, why should a school bus be exempt?

I have yet to meet the perp who is going 80 mph, being chased by
police and will stop for a school bus's red lights.
(granted, an extreme example but nontheless...); or the ambulance
who is going to a multiple vehical MVA with several lifes 'dangling'
on thin thread and -every- second counts....

Just my $0.02 worth.

cah

Source record: 143241

> I might be taking a train ride on Amtrack from Seattle to Walla Walla.
> Does anybody have any frequenceies for AMTRACK??

Amtrak uses the radio frequencies of the host railroad. In Washington, this normally means the Burlington Northern. Unfortunately, the nearest Amtrak service to Walla Walla is the Portland section of the Empire Builder, which stops at Pasco.
Leaving Seattle, you would either have to take one of the northwest corridor trains to Portland and change to the Empire Builder, or take the Seattle section of the Empire Builder to Spokane and change to the westbound Portland section (an interesting routing, since all four trains are in Spokane at 1am).

The BNSF road and dispatcher frequencies should be:

Empire Builder
Seattle - Snohomish (Everett) 161.160
Snohomish - Spokane 161.100
Portland - Wishram 161.415
Wishram - Spokane 161.160
Northwest Corridor
Seattle - Black River (10 mi) 161.160
Black River - Wabash (Centralia) 161.415
Wabash - North Vancouver 161.100
N. Vancouver - Portland 161.415

The Alinco DJ-X10T has the most rugged construction of any
portable scanner since the old Azden-manufactured
Regency HX-1000/1200/1500 series.

I was impressed with the flexible battery arrangement
and overall RF/AF performance. Appreciated the user programmable
memory labels, too.

Drawbacks include:
a. 5 - 6 channel/second memory scan rate,
b. auto store facility which stores duplicate active frequencies
instead of being able to tell they have already been stored.
c. complex keystroke sequences and memory organization

Like the other wideband portable scanners, passable
shortwave reception requires you install a different
antenna (not supplied). The DJ-X10T I tested for an
upcoming issue of Monitoring Times was more
sensitive on shortwave than the sample AR8200.

:Hello there...
:
:I'am searching for the modification off the UNIDEN UBC-9000xlt.
:Do you have this modification please send it to me !!
:
:Bye Kees

There are many modifications for the UBC-9000xlt.

One mod is to take a hammer and bring it down on the top of the case
several times very heavily. The effect of this mod is to reduce the
frequency coverage and number of memory channels to zero.

A less permanent way is to simply remove the power.

Those are the "off" modifications.

To improve reception of a signal move the scanner closer to the signal.

Send for further useful mods.

Barry

> scsando@wazoo.com

Shaun;

Question one. Depends how you have it listed on your license. If it has
a
station class of FXO that means that it is an operational FIXED station,
no mobile operations allowed. you would have to modify your license to
change the station class to MO (mobile) to be legal.

Question two. Again add modify the license to add the station class MO and you would be allowed to operate mobiles on this frequency. Or if you wish to use this frequency as a base ststion at another location modify the license to reflect the new location. Another way would be to modify the existing license to add a station class FBT (Fixed base temporary) this means that you can move the transmitter around. I think the FCC frowns upon using this temporary class of station at one spot for more that a couple of months ie not a permanent instalation. Better to modify the license to add this as a permanent location on the license.

Question three. Yes, if you issue the user what is called a letter license. This letter authorizes the portable owner use of only the mobile
side of the frequency pair for the term of your license. The letter must be
reissued when you renew the license. The mobile count on the license must
not exceed that on the license.

Hope this helps

Regards

Ed

The ten codes and other codes are all unique to an agency or area. I've always known "Code 3" as a response status (lights/sirens), however an agency that I once dispatched for used it for "unable to locate, back in service".
Good luck finding the info respective to your area.
Michael

JT,

> Hmmm. Sounds like it's broken. Most of them are. Take it back and give up.

I've just purchase one and it seems to work flawlessly. Besides, I've not seen much posted to this effect regarding this scanner. How is it that you've come by this opinion? It concerns me because mine is brand new and I don't want any problems with it.

I will say this, until I did a RESET on the unit, it was flakey in trunking mode. But afterward I was able to correctly program it and utilize it for trunking. It's an amazing hobby now that I've gotten this capability. I'm even enjoying the local elementary schools ordering toilet paper and the like! <G>

This is flat-out wrong. In your zeal to sell Cheek's CE232, you have overstated its capabilities. Adding a CE232 will not enable the PRO2035 to tune cell. Bill knows that and I doubt that he would appreciate your making up nonsense, apparently on his behalf.

If you get an Opto OS535 interface from an overseas seller or one that was made to be sold here about two years ago, you can tune cell phones (you must enter a 20-digit unlock code as well).

On Sun, 20 Sep 1998 16:52:53 -0700, Bob Esacove
<mebe1@ix.netcom.com> was lurking in rec.radio.scanner, and
composed the following about "BC 200XLT After market Anntenna":

> Is there an after market antenna that out performs the rubber antenna
> supplied with the scanner? I saw a advertisement a while back for a
> portable antenna that looked like a mini space helmet (round W/ wires
> extending from a main ball). They made claims that it offered improveded
> receiption for all frequencies. If such an antenna or something simular
> works, you someone supply with the products name and place where I can
> buy one. Thanks Bob

Of all places, Radio Shack makes two different telescoping
antennae, with center loaded tuned coils on them; one has a
motorola plug, the other a BNC connector.

They're both $9.95. Sorry, I don't have the stock numbers handy.

You can extend or detract the antennae to properly (as close as
feasible) tune to the frequency being scanned, i.e.- shorter for
800mHz, longer for 45mHz.

I'm pleased with its performance.

=vt

If you're considering this for a mobile setting, you might be better off
with an Icom/AOR/Alinco widebander, an Optotrakker and a laptop PC. The
Bearcat/Realistic trunktrackers are limited in their system coverage
(they're only compatible with Motorola TRSes). Think about that.

Every agency in the country has its own specific codes. There are a lot of "common" or "standardized" codes, but nothing you can hang your hat on. The "Police Call" guide for Texas, available at Radio Shack, should have a list in the back of common Texas codes, and codes used by some larger agencies.

Otherwise, you'll just have to listen carefully when the various codes are used, and try to figure out from the accompanying conversation what they're talking about. A lot of them should become clear to you after listening a while.

Good Luck Jack,

I was scheduled to arrive in Orlando at 10:00 AM Friday for a fishing trip with my Dad and brother. I just cancelled. Delta said I could reschedule with no penalties or additional fees. (Thanks jorge!).

I was planning on packing my Pro-39, to monitor the action, but I think I'll just monitor it from here, (If ya'll don't mind.)

The wife and son already left for her parents house for the weekend.

Soooooooo. It looks like I got the weekend free!

I win! I win! I WIN!!!!!!

Now don't ya'll go and die down there or anything! ;)

Good luck man. I'm pulling for Jorge to head out into the gulf.

Have you looked in Gall's http://www.gallsinc.com/ (request a
catalog)? I bought a center console for my Caprice which may work in
your truck. It holds three radio and is very sturdy. If the thieves
did get in it would take a few minutes to pry them out of there (buy
an alarm).

Yes, and no. It has to be narrowband, and the mobile power ERP has to
be 2 watts or less. So, in answer to the question, no.

>Question three. Yes, if you issue the user what is called a letter
>license. This letter authorizes the portable owner use of only the

First off, there is no such thing as a "letter license". You can have
letter of authorization from the licensee, under specific terms, but
it is by no means a license.

Secondly, there would be no need for such a letter in this case,
employee provided equipment can be programmed up, and run,
as long as it is done within guidelines of the license.

Source record: 143148

Anyone compared the SSB receive between the R10, AOR 8200, and DJ-X10? I currently have a R10 and am not very pleased by the SSB receive on shortwave at all. I also find it impossible to decode any rtty or digital data modes of any sort or shortwave since the bandwidth seems to be too narrow to capture a large enough portion of the transmission to make any sense of it. I really would like to get the AOR 8200 since it can be computer controlled like the R10, but descent SSB receive is a must for me. I welcome any comments, thanks!

Frank

6874. How to program RS PRO-508?

Source record: 143154

I did not catch the original post but to answer this question...

The CE232 is an interface between a scanner and computer. It cannot receive or process any RF signals.

The CE232 can program your compatible scanners, Pro-2004, 2005 & 2006 to receive any frequencies that they can normally receive or have been modified to receive. Other scanners can be programmed with the CE232 but only the Pro-2004, 5 & 6 give bi-directional flow of data so that the scanner CPU data is displayed and controlled by this interface with appropriate software.

The CE232 does not add any frequencies to these scanners. With a minor modification (snip a diode) the Pro-2004, 5 & 6 can receive the cell frequencies which can be programmed manually or with the CE232.

The CE232 with appropriate software can bounce the scanner from the handset frequency to the cell-site frequency durring a search of the cell handset frequencies.

If you're interested in monitoring military communications you need to join MilCom, the military monitoring e-mail listserver.

To join, send an e-mail message to: majordomo@qth.net
In the subject put: milcom
In the text area put: subscribe milcom

That's all there is to it. You should start receiving messages within a few hours.
To post a message to the list members address it to milcom@qth.net
We have members all over the country, in Europe and Japan.
For help finding frequencies in your area just post a message stating your location
and requesting frequency help and you should get some answers.

John Ward

There it is: the need for the CHEEK guy.

Look what a blunder has been done by one idiot-one wimp
in keeping the Cheek guy off this NG.

Hey mackeral of royal stinkness....what is the answer to this question?

bill conduit
etc.

Source record: 143166

If I remember correctly, the guy in Denver who used a modified ham HT to call for help on a police repeater had his rig confiscated, even though he received kudos for taking the action he did. Why? Because his action under Part 97 did not negate the fact that it's ILLEGAL to modify a ham (or any) transmitter to operate out-of-band. What you end up doing is violating type-acceptance. The exception of course is that another service's equipment can be modified for the Amateur Service.

So no one should be surprised at the possible consequences if you do end up calling the cops on their freqs.

Ever since I heard about the Pro-64 being closed out for under $100, I got on the phone and started calling Radio Shacks. There's none available within 200 miles of me. One local franchise had one for $299. When I told him that it was being closed out, he offered it to me for $199. Too high. Does anyone know where I can find one of these radios new for <$100?

>
>

The Ce-232 does nothing to the tuning range or modes in the scanner.
It is not like an opto board, which replaces the scanners cpu with its
own while it is engaged.

FWIW I own both a Ce 232 on a 2006 and an OPTO 535 on a 2042.

For a 2004 2005 2006 I think the CE232 is a better choice than an OPTO
456, especially now that the full version is discontinued. The Ce 232
can be put together for much less $ by a good scrounger, and it has
much better home brew expansion capabilities.

For any other scanner model, don't bother with a Ce 232. For any
scanner except a PRO 2004, 2005, 2006, a Ce 232 won't do anything
more than a cheap Programmit interface will do.

So basically what we are saying here is because Timothy was dumb all must pay.....

My children are only 3 and 1 respectively, and they both already know not to enter any street without first looking for cars in both directions. Maybe there ought to be a "stupid parents" law instead.

I am constantly amazed at the sheer number of stupid pedestrians and bicyclists who see the oncoming car and still force the issue of "right of way" (which most don't have in the first place). Combine that with the number of clueless morons who drive their vehicles like ballistic missiles thru school zones and we end up with stupid unenforceable laws and more dead kids.

THE SCANNER CURRENTLY COVERS FREQS
29.0 - 54
118 - 174
406 - 512
806 - 824
849 - 869
894 - 956

THESE NUMBERS ARE ROUNDED OFF...NOW MY QUESTION IS...CAN THE BC200XLT GAIN ACCESS TO MORE FREQUENCIES THROUGH MODIFICATION???..BESIDES THE CELLULAR PHONE FREQS...I ALREADY HAVE MODIFIED IT TO GET THOSE....I WANT TO KNOW IF I CAN GET SOME OF THE LOWER FREQUENCY STUFF LIKE THE FREQ RANGE 175-405...ARE ANY OF THESE BANDS ABLE TO OPEN UP BY REMOVING SOMETHING LIKE I DID FOR THE CELLULAR FREQS??? A EMAIL WOULD BE APPRECIATED...THANKS...OR YOU COULD JUST REPLY TO THIS..THANKS :)

6899. how to order for France

Newsgroup: rec.radio.scanner
Date: 1998-09-25 00:00:00 UTC
From: noel <f1tzf@club-internet.fr>
Message-ID: <6ugpp6iht1@front1.grolier.fr>
Source record: 143174
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hi everybody !

I'm a new french addict to this forum and also some others about radio & scanner.
After some visits on the web, in Ham-radio dealers, I noticed that prices are really lower than in France.
For example: the difference for a AOR 8000 is about 150$.
So I'm tempted to order a scanner or TX/RX. I'm really insterested by the IC Q7 ,the new ICOM handheld.
Then I'd like to have information from users about birdies,intermodulation,& so on....
An other question,how import a device into France? How much is the shipping,taxes...

About scanning in france,it's not very interesting if we compare with reports in USA.
800/900 Mhz is very busy whereas here it's the desert, there is only GSM phone.
So the pleasure "to trunk" is a dream for us.We have functions of our devices but there are useless.
For information here is a freq plan : 66-84 =>various users :taxis,prived communications,....

84-87.5=>police,firemen,ambulances (main band)

108-136.5=>civil aircraft

136.5-144=>MIL aviation
144-146 => 2
M band
146-150 =>
empty
150-156 =>
like 66/84
156-162
=>VHF marine ,various broadcast in gaps
162-166
=>Various users

169.3-169.9=> Alphanum paging system with E.R.M.E.S norm (400

characters per MSG)."TAMTAM"&"KOBBY" brands

170-176=>Various users

210-215=>Old analogic phone system in Paris which is

disappearring (Radiocomm 2000)
220-380=>
MIL UHF aviation
418-420=>
Various com
424-428=>
Radiocomm 2000 national range (same 210/215)
430-440=> 70
cm ham band , LPD devices within.

441.5-443.5=>SFR analogic mobile phone

443.5-447=>miscellaneous

464-466=>police,firemen in Paris & big cities

466-466.3=>Alphanum paging "TATOO" system by FRANCE

TELECOM public service. only 80 characters.

466.1-470=>Miscellaneous including railway service.
470-890=>UHF
TV main use.
890-915=>GSM
phone. mobile to base (FTelecom / SFR prived)
935-960=>GSM
phone. base to mobile.

1710-1785=>DCS phone .To base \

1805-1880=>DCS phone. To mobile/ Bouyges Telecom (prived)
From 1st
january 1999 FTelecom & SFR could use 1.8 Ghz

I hope that some people enjoy this plan even it's useless for you.I'd like
knowing yours.
Waiting for answers all my best 73's :-)

Excuse me for mistakes :-)

WELL THERE'S PLENTY OF FOOLS WHO HAVE MADE GOOD DEALS WITHOUT USING YOUR METHODOF PAYMENT INCLUDING MYSELF(YOU'RE SUPRISE I BET).
Also realize this,I'm not in this for fun of it not to make a living . So I won't and don't have a sell you anything(Thank God). Keep your two cents in your pocket and not on the boards.Policing people you do not know. You should at least know a person before passing yourwonderful judgement around.I've had nothing but good dealing on this NG and packet radio for the pass years while selling and trading equipment.Guess what and you can't change that Because I have established myself as a honest person and has never ripped or been ripped off.
There's one thing you're correct about i dont know anything about spaming So you got me there.
What else?????????????

Naw, you've been spouting complete nonsense when you now the self-appointed advertising agency for Bill Cheek. You've been posting and reposting his stuff as though you were Moses with clay tablets in hand.

> Like I told you when you had the nerve to accost me via e-mail, when you give no respect, you get none.

Naw, I sent you via e-mail a copy of a post that I made here. That isn't accosting you by any stretch of the imagination, including a warp pea-brain like yours. You also sent me a wacko reply, which you began by telling me that I need not reply because you already filtered it (along with my newsgroup posts, which you claim not to ever read). Aside from being a coward, you're also a blatant liar. Respect you? You're a piece of doo-doo on the bottom of a cow's hoof.

>The only reason you had to start championing the Programmit was that I mentioned Cheek`s interface in the first place. Yeh, I think you are on a

crusade here......

Naw, if you weren't so new around here, you'd know that I have been a long-time advocate of the PROgramit interface. I happen to think that it is a worthwhile product. I'm less impressed with the CE232, something that I have told Bill Cheek on several occasions. He doesn't seem to soil his drawers over it, so why do you?

See ya, wouldn't want to be ya!

Please stop spreading misinformation, next you'll be neck
and neck with the good times virus email.

It is NOT illegal to modify a HAM HT to go 'out of band' ,
with the exception of 'phone' frequencies. It is illegal to
USE it out of band. BIG DIFFERENCE!!

Besides, it's like carrying a gun. If and when the time
comes when you really do need it, if the need is sufficient,
who gives a hoot what the law is.

I'd GLADLY sacrifice a radio if it just mitigated one of my
kids suffering by even a few seconds! Who gives a shit
what the law is if my kids in pain! Right?

>Captain Crimefighter <"Captain Crimefighter"@cabrillosquare.com>
>bravely declared in alt.thebird.copwatch:

>>SoCal Agencies Ponder 311 to Reduce 911 Calls...

Personally, I wonder if having another "national number" for non-emergent calls is the answer to reducing non-emergent calls on 9-1-1.

Not too long ago prior to the implementation of 9-1-1, seven digit dial numbers were painted on police cars, fire trucks, ambulances. These numbers were publicized in several forms and many agencies had "non-emergency" or "other business" numbers in the directory.

My doubts about 3-1-1 are based on:

* Everyone's emergency is subjective. Unless WE educate the public as to what WE expect them to perceive as an emergency, we will be receiving barking dog and blocked driveway complaints on 9-1-1 forever- no matter what other numbers are available to call.

* 3-1-1 is an expensive proposition for most places, especially for those that are struggling to get 9-1-1 online or are upgrading from their first generation of enhanced signalling.

* Public safety entities must pay (or impose a surcharge, user fee or tax) to subsidize the operation of 9-1-1. What will this rise to if the public's expectation of standard of care rises to 3-1-1? The Commission's findings are that the 9-1-1 authority is the customer and must ultimately pay for mandated new technology, like mobile telephone interconnection into 9-1-1 and radiolocation. Don't look for industry subsidies even though safety aspects are a major revenue producing point for them and telecommunications is a billion$ industry.

From where I stand, once we developed 9-1-1 and pushed for the national emergency number concept, most places abandoned any public education as to what IS and what ISN'T an emergency, and along with it, stopped publicizing their alternate emergency reporting and "other business" lines. 3-1-1 could easily be 945-0205 in a community, if it was posted along with 9-1-1 on stickers, pamphlets, literature to kids and under 9-1-1 on emergency vehicles. And, there would be no cost higher than maintaining several POTS or DID lines unlike building ANOTHER communications infrastructure for 3-1-1.

If all the public sees is 9-1-1, that's what they'll call.

ONLY active public education is the key to success or failure (even for the 3-1-1 program).

Steve

Captain Crimefighter wrote...

>The problem is well-defined: too many calls to 911. But public safety
>agencies in Southern California are not completely convinced that the
>recently-approved 311 number is the solution.

And Right you are!

One of the greatest challenges in analyzing the 3-1-1 issue is countering the nonsense that came out of Baltimore. I say nonsense, though I could use *far* stronger words.

Not only does the "Baltimore 311 Study" lack any scientific merit, it deeply offends the decency of all of us in the Public Safety sector who place truth above politics.

The article in Dispatch magazine..

>http://www.911dispatch.com/web_story/stories_97/story-32-may97.html

...only begins to scatch the surface of what will become a major debate in the Public Safety arena. The well written article is indicative of the excellence at Dispatch Monthly Magazine.

If your professional responsibilities include Public Safety Dispatching, I encourage you to subscribe to the (hardcopy mailed) version of their outstanding publication.

http://www.911dispatch.com

Speaking my PERSONAL opinion (and yes, publicly condemning those who promulgated the Baltimore study)...

"other

I agree with the above. The debate over "emergency" telephone calls
vs non-emergency calls is a worthy topic for public safety to
consider. But why is it cross-posted to alt.radio.scanner and
rec.radio.scanner? And why does almost everyone participating have to
quote the entire 4 kB original message?

Does the Commission even remember what "interoperability" really
means?

If the FCC wants to promote efficient use of radio spectrum to inform
and coordinate public safety response to emergencies, then the FCC
must begin by mandating technical standards, just like they have done
with analog technology. Forget the "market forces" approach - it
hasn't worked.

He does it because he is the same flavor as Mackalooney.
I find his cross - posting of this stuff to other groups like alt.homosexual
highly amusing. He is obviously an "Archie Bunker" type, and he thinks that
the majority of the people on this group are "sympatico". he is your typical

gay - basher, with latent homosexual tendencies. This is the only reason anyone else being purportedly "gay" would bother him. he has only served to point himself out on alt. homosexual as a homophobe, and I hope they come down on him like a ton of bricks.
Although I am hetro, I have had a few gay friends over the years, and have found them to be generally inoffensive, well - behaved, and in many cases, well - educated. What they do in the privacy of their own home behind closed doors does not concern me in the least.
I recently voted for a gay rights law in Maine that was voted down by the "Archie Bunker" types, which made Maine the laughing stock of the country. I voted for it because I do not believe that they should be thrown off bridges and killed simply because they are not the same as us. This actually happened in Bangor.
Healey , on the other hand, fears homosexuals simply because he fears his own homosexual tendencies, however latent they may be. (What other reason would you have to hate gay people ?)

Now, Healey, I suggest you take your gay -bashing activities to a news group that is ignorant enough to sympathize with you. If there is an alt.Archie Bunker news group, you will be tright in your element.....

For what it's worth . . . I've heard high school football coaches on 154.600 MHz in the city where I live, so it's worthwhile to search the low-power itinerant business frequencies. You might also check the FCC or Percon Corp. databases to see if the high schools in your area are licensed for any of the low-power itinerant freqs., even though there's many people who never bother to get the required FCC license for the radios which operate on the itinerant frequencies.

A few years ago I saw a scanner in a Scanner World catalog, but I cant remember the model number. I'm pretty sure it was made by Uniden. It had a seperate control head you could mount on your dash with the main receiver mounted out of the way. It had an alphanumeric display and could be programmed by a PC.

Does anyone have any info on this unit and where I might find one?

R E A L I T Y C H E C K

Definitive data on the posting history of Toilet Boy (aka Mackey).
Edited for the more salient point(s). Compelling nonetheless.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched the archives at Dejanews to see how much John "contributes" to the group. I found some 13000 posts in all in the scanner newsgroups since he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has made can be counted on one hand, with room left over. Case closed, folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have proven what the Clown Prince of Scanning is really all about: A personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0
OCT 97	48	60	0	0	8	0	0
SEP 97	181	78	0	2	4	0	0
AUG 97	29	2	0	1	2	0	0
TOTALS	2139	2348	201	203	275	266	341

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

There are two major products that came out of Berkeley: LSD & UNIX. We do not believe this to be a coincidence ....

Scout 40 and accessories for sale - $310 firm

Original costs when purchased from Optoelectronics in May of this year, detailed below, were $402.

Scout 40 ($349 original cost)
DB32 stubby antenna ($29 original cost)
CC30 carrying case ($9 original cost)
freight ($15 original cost)

Unit is in perfect condition with the exception of a minor repair to the elastic strap inside the carrying case resulting from a manufacturing defect. All original packaging and accessories are included.

Payment will be by postal money order. Shipping by UPS ground within the continental US is included in the purchase price.

Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of)
)
Reallocation of Television Channels) ET Docket No. 97-157
60-69, the 746-806 MHz Band)

NOTICE OF PROPOSED RULE MAKING

Adopted: July 9, 1997 Released: July 10, 1997

Comment Date: [45 days after Fed. Reg. publication]
Reply Comment Date: [75 days after Fed. Reg. publication]

By the Commission:

INTRODUCTION

1. By this action, we propose to reallocate the 746-806 MHz band, currently comprising television (TV) channels 60-69. We propose to allocate 24 megahertz, at 764-776 MHz and 794-806 MHz, to the fixed and mobile services,
and to designate this spectrum for public safety use.

We propose to allocate the remaining 36 megahertz at 746-764 MHz and 776-794 MHz to the fixed, mobile, and broadcasting services; and we anticipate that licenses in this portion of the band may be assigned through competitive
bidding.

These allocations would help to meet the needs of public safety for additional spectrum, make new technologies and services available to the American public, and allow more efficient use of spectrum in the 746-806 MHz band.

We also consider issues related to protecting existing and proposed TV stations on channels 60-69 from interference until the transition to digital TV (DTV) is complete, but defer specific interference protection standards to a separate proceeding on service rules in the 746-806 MHz band.

BACKGROUND

2. Channels 60-69 (746-806 MHz) are relatively lightly used for full service television operations. There are currently only 95 full service analog stations, either operating or with approved construction

permits on these channels.

In the Sixth Report and Order in MM Docket No. 87-268 (DTV Proceeding), we adopted a Table of Allotments for digital television.

This Table provides all eligible broadcasters with a second 6 MHz channel to be used for DTV service during the transition from analog to digital television service. The DTV Table also, interalia, facilitates the early recovery of a portion of the existing broadcast spectrum, specifically, channels 60-69, by minimizing the use of these channels for DTV purposes.

The DTV Table provides only 15 allotments for DTV stations on channels 60-69 in the continental United States.

3. In providing for early recovery of spectrum, we also observed that there is an urgent need for additional spectrum to meet important public safety needs, including voice and data communications, and to provide for improved interoperability between public safety agencies. We indicated that spectrum in the region of the 746-806 MHz band may be appropriate to meet some of these needs.

We stated that we would initiate a separate proceeding to reallocate the spectrum at channels 60-69 in the very near future, and that we would give serious consideration to allocating 24 megahertz of this spectrum for public safety use and consider allocating the remaining 36 megahertz in the 746-806 MHz band for assignment by auction.

4. In 1995, the Commission, along with the National Telecommunications and Information Administration, established the Public Safety Wireless Advisory Committee (PSWAC) to study public safety telecommunications requirements. The PSWAC was chartered, inter alia, to advise the Commission on total spectrum requirements for the operational needs of public safety entities in the United States through the year 2010.

On September 11, 1996, the PSWAC issued its Final Report. The PSWAC found that the currently allocated public safety spectrum is insufficient to support current voice and data needs of the public safety community, does not provide adequate capacity for interoperability channels, and is inadequate to meet future needs, based on projected population growth and demographic changes.

In the Final Report, the PSWAC stated that data communication needs are also expected to grow rapidly in the next few years, and wireless video needs are expected to expand quickly. In addition, new spectrum is required to support new capabilities and technologies, including high speed data and video.

The PSWAC found that, in the short term, 24 or 25 megahertz of new public safety spectrum is needed, and concluded that public safety users should be granted access to portions of the unused spectrum in the 746-806 MHz band.

5. On April 10, 1996, the Commission released a Notice of Proposed Rule Making (Notice) in a proceeding to address current and future public safety wireless communications and spectrum needs (Public Safety Proceeding).

The Notice proposes measures to address current and future communications needs of public safety agencies. The Notice also sought comment on regulatory approaches that would facilitate the development of interoperable equipment and technologies and system requirements essential to the effective performance of public safety functions.

We requested comment on technological issues regarding the enhancement and improvement of public safety wireless communications and measures to foster spectrally efficient communications.

Finally, the Notice addressed additional spectrum allocations for public safety agencies. This instant proceeding also addresses spectrum allocations for public safety communications; and, therefore further addresses some of the issues raised in the Public Safety Proceeding.

6. In the DTV Proceeding, we stated that all existing analog and DTV full service broadcast operations on channels 60-69 will be fully protected during the transition, which is targeted for completion in the year 2006.

At that time, we anticipate that analog TV operations will cease and all digital TV stations on channels 60-69 will be relocated to other channels. The allocation proposals set forth below are consistent with this plan.

I. Allocation of Spectrum for Public Safety in the 746-806 MHz Band.

7. Public safety services are essential to the well-being of the American public. Public safety agencies work to ensure the security of the public both on a daily basis and in times of natural disasters and other crises. The ability of public safety agencies such as police and fire departments, emergency medical services, and forestry and emergency response services to react swiftly and efficiently to crimes, traffic and aircraft accidents, natural disasters, and special events is enhanced by public safety
agencies' use of communications technology. Radio-based communications allow
public safety agencies to pass information quickly, coordinate their efforts,
and warn of impending danger. As telecommunications technology has become more sophisticated, its contribution to the effectiveness of public safety agencies has dramatically increased.....

6965. Misuse of 911. Is 311 the answer?

Newsgroup: rec.radio.scanner
Date: 1998-09-26 00:00:00 UTC
From: Captain Crimefighter <"Captain Crimefighter"@cabrillosquare.com>
Message-ID: <360C354F.DBCF1486@cabrillosquare.com>

SoCal Agencies Ponder 311 to Reduce 911 Calls

The problem is well-defined: too many calls to 911. But public safety agencies in Southern California are not completely convinced that the recently-approved 311 number is the solution.

Cities and counties surrounding Los Angeles say they receive all types of non-emergency incidentson 911. Callers apparently find it's the easiest way to contact the police. So far, none of the agencies has plans to implement 311, but several are considering it.

The Federal Communications Commission (FCC) reserved 311 nationally on Feb. 19 to "gain access quickly to non-emergency police and other government service to be in the public interest."
(DISPATCH, March 1997)

"At this point, we just don't have a real clear handle on how it can be successfully implemented," said Capt. Scott Brown, of the Orange County Fire Authority.

He said their dispatchers handle about 15,000 calls on 911 each month.

Roger Ham, administrator for Huntington Beach's comm center, said, "We think it's a real solid way to get those (non-emergency) calls off the 911 lines."

He feels 311 should be implemented on a countywide or statewide basis, rather than city-by-city. "Otherwise, it wouldn't work because people wouldn't know when or when not to call 311."

Huntington Beach dispatcher Richard Eidlhuber recalled a woman who called to report she had fallen out of bed. "She probably needed help, but it wasn't
a life-threatening situation," he said.

Other agencies wonder if education might be a better--and cheaper--solution. "Education is one of the most difficult things to accomplish," said Richard Blansett, Fullerton police's crime analyst.

"We're just now making headway in teaching people when and when not to use 911. If we implement 311, we'd have to start all over again."

Still other cities are taking a hard line on 911 abuse, fining callers who abuse the number. Last year Garden Grove fined 82 residents $25 each after they dialed 911 and hang up.

Their calls required dispatchers to call back and send officers to check the residents. "When the officers got there, there was no emergency," said Julie Dutton, comm center manager. "Sometimes it's a misdial, and other times it's their kid playing on the phone."

The state program is studying whether to fund 311 from 911 surcharges. "Right now, all that is still in its infancy stage," said Leah Senitte, program manager for California's 911 agency.

Phil I do not remember all of the posts previous to yours so if this is
just rehash please excuse me

I myself have three children and all of them know the rules of crossing the
street. My youngest is two.

I do not think it is fair to call Timothy dumb, lets face it the child was
only 7, not an adult as you and myself. It is very easy for a 7 year old to
just forget to look before crossing the street. Let me ask you this, how

many adults do you know that have leapt before they looked?

I agree that some of the laws are somewhat excessive, but well needed. I do not believe that people who blow through school zones or zip past a stopped school bus are clueless morons but just do care until they have hit a child or have had one of their own children hit.

That is why laws like these are enacted. So do the rest of us pay for the others, I do not think so. If you are taking prudent steps to watch out for your safety and the safety of the children in and around school zones and bus stops then laws like theses shouldn't upset you so since you are already taking every step possible to avoid a collision with another vehicle or pedestrian.

In closing I would like to say that the comment "Maybe there ought to be a stupid parents law instead" sounded a bit excessive.

Once again I did not get to see the earlier posts so forgive any misinterpretation of your post. :-)

Greetings!

I do not have access to a freq. book and cannot find what I need on the web.
I was wondering if someone would be kind enough to send me the police freqs
for Pasadena, Texas.

Any freqs on top of that from pasadena are appreciated!

Thanks in advance

I usually avoid doing the following, but this thread verges on setting
a Usenet record. Donning Nomex underwear, I note -

The original poster inquired about frequencies for an Amtrak trip from
Seattle, Wash. to Walla Walla. Various posters replied:

> ... check out PoliceCall from RadioShack for Amtrak freq's.
> I'm too tired to list all of 'em.
Ignoring the tone of this reply, it still doesn't help with the actual
operating frequencies, which belong to BNSF.

> ... and also it's is "its".... <GRIN>
The contraction of "it is" is "it's"; "its" is the possessive form.

> I took Amtrak home once, when I was on leave from the Army. I HATED IT!!!!!!
Amtrak, home or the Army ? (One trip, date/train unspecified, isn't really
a basis to offer a judgement.)

> ... Frequencies that I have for Amtrak ...
The frequencies offered are for the Chicago terminal, Conrail, and the
N.E. Corridor M.O.W. & police - a unique routing for a trip from Seattle
to Walla Walla.

> These should be the correct freqs: 161.145 161.160
More helpful, but that should have been 161.415.

> ... and a few of their own in fargo n.d. it is 160.305
Definitely helpful - that's the Chief-of-Service on the Empire Builder.

> try searching or enter all r.r. freqs in your scanner
Not helpful, unless the listener can distinguish every BNSF & UP hump, yard,
pulldown, tower & PBX from the road frequency he's listening for.

Based on the replies he recieved, I suspect the original poster has
given up and is taking Greyhound. Please, folks - could we have: accuracy;
relevance; civility; and grammer/punctuation in the postings. I'd settle
for two out of four.

6978. Wards/Bearcat 220 repair

Newsgroup: rec.radio.scanner
Date: 1998-09-26 00:00:00 UTC
From: mroberds@worldnet.att.net
Message-ID: <6uicud$pep@bgtnsc02.worldnet.att.net>
Source record: 143221

Hello all!

I am working on a scanner for a friend of mine. It is a "Bearcat for Montgomery Wards", Wards model GED-845A. From what I have been able to find out, it is the Wards version of the BC-220.

The main problem with it right now is the keypad; I have another one on order. Other than that it works fine. However, I read the "Repair Tips for Bearcat Scanner Radios" by Bob Parnass and it mentions the switching power supply problems with capacitor C98. I found C98 and what I believe to be the switching transformer; in this area of the board there is a small 1/4 watt resistor that has been rather warm at one time and a small darkened spot on the PC board. I have also found many questionable solder joints all over, which I am going through and re-soldering.

My question is: is it wise to "pre-emptively" replace C98 and possibly other parts, or to just leave it alone, since it works now? Anything else not covered in that document that I should look at?

Thanks very much for your help!

I used to work as a dispatcher for the "Safety Officers" (Campus Police) at my college and we got non-emergency calls on our own 911 system fairly frequently. Anyway, we used to answer the phone "Safety Office, what is your emergency?", when the caller would stutter and say that there wasn't an emergency and just wanted the phone number to Dominoe's we would give them the directory assistance number and hang up. I had a guy call the 911 line and I answered the the normal way and when asked the caller said that his call wasn't an emergency and he promptly called back the non-emergency line. When asked what he wanted to call us about, he wanted to report a dorm room on fire!!! The job was rarly dull anyway. :)

> Is Bill Cheek sneaking back in disguise?

Zombie Wolf made a simple mistake on a feature of the CE-232. No big deal. Since Bill sells plans, kits, and completed/tested CE-232 units, Bill would know these units inside and out (literally). Such a mistake wouldn't likely be attributed to him. In fact, Bill is highly accurate in his technical info.

If Bill chooses to return to this NG, he'd hardly have to "sneak" anywhere. Since scanners are his business, it would be in his interest to post under his own name. He's still got internet access and could participate if he chooses. He simply chooses not to.

As for you Victor: What's your purpose here? Your posts are nothing but negative snipes at anything and everything having to do with Bill Cheek. What's the reason for your negative attitude with Bill? The only people on Bill's "sh*t-list" are NG loonies and pests (such as yourself), who really have no interest in scanners but seem to confine their activities to attacking vocal personalities. Why do you do it?

Lead acid batteries typically want a constant voltage charge, only slightly above their normal voltage. For a 12 volt battery, the trickle charge is usually about 13.8 volts. Any higher will result in premature failure of the battery.

To quick charge lead acids, you need to use two voltages; a higher voltage to quick charge, then a lower voltage to trickle charge.

You may also want to use a sealed lead-acid like those typically used for alarm systems, etc. They are considered "spill-proof", although I would place them into a acid-proof plastic container just in case the case were to crack. The acid is contained within a gell, but can still leak out.

James

Reminds me of a police dispatch I heard yesterday. No idea if RP called
it in via 911 or the 7 digit number (there isn't a 311 here). The RP
wanted contact because her neighbor "called her a pig." I was expecting
the officer to come back to dispatch with some smart assed comment but
all he came back with was "does the RP want a 21 or a face 2 face." The
RP wanted a face2face.

try these. nearby high school I always hear 'em one or so,

If you can get a look at the bottom of a Motorola radio and it has a
colored dot, symbol or letter on it, you know the frequency it is on:

Blue 154.570 Brown 464.500 Green 154.600 Red 151.625 Yellow
464.550
Purple 151.955 White 462.575 Black 462.625 Orange 462.675 J
467.7625
K 467.8125, Silver Star 467.850, Gold Star 467.875, Red Star
467.900, Blue Star 467.925

Jobcom radios 151.625, 462.575, 154.600, 154.570
Util-com radio 154.570
Voice one radio 49.845

The Motorola Talk About radios use the following 14 frequencies:
(Low power-1/2 watt)
1 462.5625, 2 462.5875, 3 462.6125, 4 462.6375, 5 462.6625, 6 462.6875,
7 462.7125, 8 467.5625, 9 467.5875, 10 467.6125, 11 467.6375, 12

Hi !
Anyone got it to work ?
I use 2 level (SCHMITT TRIGGER) interface wiht PRO-51.I had to modify the value of resistor from pin3 to the ground to get it to work. Had a hell of a time to get the discriminator output, but that was worth the effort. NOw i need to make the 4 level interface to work.
I have seen at least 3 versions of schematics. Does anyone know (or have) a lyout that works ? One i tried to put together is at www.qsl.net/pa3eik/4lev_fsk.html.

BTW 2 level seems to decode 2 channels from FLEX transmissions properly (POCFLEX.EXE)

Thanks

To those of you who believe cordless phone monitoring to be illegal in
the US, can anyone cite any statutes (federal, state, local or other),
that will validate this belief?

7005. ROTFL

Newsgroup: rec.radio.scanner
Date: 1998-09-27 00:00:00 UTC
From: Victor Healey <fourphun@bellsouth.net>
Message-ID: <JgAP1.4315$R_4.4047577@news3.mia.bellsouth.net>
Source record: 142998
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I am a vociferous reader.
I have had the privilege of reading V8N7 World Scanner Report I picked myself up from rolling around on the floor laughing ;>}
You guys are mean for forwarding that one to me Our hero was mad as a snake. In just the last few months while he was making rec.radio.scanner unreadable, Bill also not only got kicked off SCAN-L. he joined CARMA and immediately got kicked off, he started his own list only to lose his ISP account which forbid such things (cable providers explicitly forbid this), and he finally got one started on QTH.NET only to be jerked by the very men he selected to run it after he made an obnoxious post. How can you get kicked on your own mailing list? Only Bill could manage the impossible! ROTFL!

Anyway his parting words are he plans to be back. He proposes to merely post without bothering to read the posts from other people. He envies Bob Parnass who we all respect for his dignified desimination of valued information and years of experience. Yet he could not bring himself to mention Bob by name. He wants us to respect him like we do Bob.
I have no problem with that, I just draw the line at boorish antisocial behavior. He devoted several paragraphs to whom I assume is John Mackey- again no name.
In the meantime he announces he is dropping phone support for all those that have had dealings with him except he promises to answer the phone one hour a day around 5PM, MAYBE.
I hope other venders do not drop their phone support for the high tech items they sell just to save a buck.

Anyway I wouldn't even have thought about it except for these masochists who delight in making sure I get to read World Scanner Report after they read it. The last one wasn't too bad for several pages until I ended up on the floor. But hey guys, I would rather read the CARMA newsletter or some of the other local newsletters, hint hint.

>and possibly pick up a handheld later.
>
>--Mike

I'm using a Pro-90 and a Pro-60 as pseudo-base scanners now. They seem to do a pretty good job, picking up everything that I expect to hear. I'm in a relatively rural area, so perhaps there's not as much interference around here to cause problems. I needed units that could go with me in my car and office, so a base unit wasn't really suitable at the time.

That said, I'm planning on purchasing a BC895XLT within the next month or so, primarily to get the computer control and progamming features.

7017. New Orleans: Worst Case Scenario

Newsgroup: rec.radio.scanner
Date: 1998-09-27 00:00:00 UTC
From: Karl Dahlquist <kdahlquist@vistagroupusa.com>
Message-ID: <6umpn9$r35$1@holly.prod.itd.earthlink.net>
Source record: 143010

http://www.nolalive.com/weather/mainstorm.html

It's hurricane season again, and the region's good luck is bound to run out soon. That's the verdict of storm experts, who say the relative tropical calm of the past 10 years is over. And officials concede the area can't be successfully evacuated. So each new season, we're flirting with disaster.

The Grim Scenario:
By LESLIE WILLIAMS
Staff Writer / The Times-Picayune

Dead bodies hang in trees. Small boats have been swept away or reduced to flotsam. Venomous snakes compete for space with resident shuddled on rooftops and in attics. Water and food are rationed. Much of New Orleans is under 8 to 14 feet of water mixed with human waste, rats and debris.

It's the aftermath of a direct hit by one of New Orleans' greatest threats; a slow-moving mid-level hurricane known as a Category III storm. And for those who didn't get away ahead of the storm, the horror will not end quickly.

A computer-generated worst-case scenario has the hurricane moving north from the Gulf of Mexico into the city at 5 to 7 miles per hour. It first pushes water from the marshes of the Barataria Basin over the West Bank levees. As the storm system passes into Lake Pontchartrain, it whips up a swirling wall of water that backwashes over east bank levees and begins to fill the geographical saucer that is New Orleans.

The surviving one-story shotguns and two-story camelbacks in Algiers Point, Mid-City and Carrollton not shredded by the storm surge or by wind gusts swirling in excess of 111 miles per hour soak for days in water that has risen to their eaves.

Staff file photo
The last hurricane to take a good shot at New Orleans was Andrew in 1992, which grazed the city but devasted parts of LaPlace with a late-night tornado.
Homes are without electricity or water service. Shelters are stuffed. And everyone is trapped, whether alone or in clusters, waiting for the National Guard to bring emergency food rations and supplies of drinking water. Assuming no levee breaks, it will be three to five days before city pumps have made much headway sluicing the inundation back into the lake, marshes and river that encircle the metro region

. The worst-case scenario might seem the stuff of a summer movie heavy on special effects, but in fact its horrors are drawn from the experience of Betsy, Audrey and other hurricanes that have afflicted New Orleans in recent decades. Betsy, which
brought 145-mph winds to the Louisiana coast in September 1965, killed 75 people. Audrey, which hit Cameron Parish with slower 135-mph winds in June 1957, killed more than 500 people.

The only remedy: evacuation, an emergency response more easily said than done. One problem is the region's limited highway system, which will clog hopelessly if the onslaught of those seeking escape to higher ground comes late and all at once, as expected. The three days needed for an orderly evacuation just doesn't gibe with the natural tendency to wait out storms on the hunch that they will change course and make landfall somewhere else.

It's a deadly calculation, but not an unreasonable one. Hurricanes, after all, are fickle beasts, and beating a retreat to Jackson, Miss., can seem silly a day later as sunshine breaks over downtown New Orleans because the storm has veered southwest to Corpus Christi. That's what Gilbert did in 1988, only to change course again and make landfall not in Texas at all, but at La Pesca, Mexico. Compounding the willingness of residents to gamble is widespread ignorance of just how devastating the big one will be.

The example of emergency personnel -- the folks who know hurricanes best -- should wake up anyone tempted to take a laissez-faire approach to preparedness. Walter Maestri, director of the Jefferson Parish Emergency Management Department, will pack his wife and sons off to Jackson three days before any Gulf hurricane could possibly hit New Orleans. His job will keep Maestri here, as will Jim Hubbard's as chief executive officer for the American Red Cross in Louisiana. But like Maestri, Hubbard won't subject his family to the same risk. Seventy-two hours ahead of a possible New Orleans landfall, Hubbard's wife and their Pekinese, Pepper, have made plans to be in a car or plane headed for Dallas to stay with relatives.

``Our problem is psychological,'' Hubbard said of the area's lackluster evacuation
readiness. ``There's a generation now that has not endured a Betsy or a Camille.'' Louisianians in their 20s are among those considered least likely to follow emergency officials' recommendation to create a hurricane fund to finance trips to safer areas during hurricane season. For those still thinking of staying, Robert Eichhorn, the director of the Office of Emergency Preparedness for New Orleans, suggests they sample what's to come if a hurricane bombards this area.

His advice: ``Turn off your AC. Climb in your attic and sit in the dark for about 30 minutes.''

I'm looking for a handheld scanner. I've been looking at three, the
Uniden BC235XLT, A Uniden 200ch 800mhz non-trunking unit that
Scannerworld does'nt give the model number for, and the Relm HS200.

Any info you could give me on these units would be greatly appreciated.

Thanks,
Jughead

John you can use a provider from any area of the country. I used one in
California for years befoe the net became popular with the masses.
All you need is a POP in your city if you want local access to an out of
state ISP.
Bill Cheek is aware of how to abuse the net as seen by a casual search of
his computer
He should never have set his sytem up that way! Will these newbies ever
learn? ;>)
He had numerous files related to that. Remember he eventually lost his
account because of net abuse was traced to him. It doesn't mean he still
does, it is just that he has more knowledge about how to abuse the net at
his disposal then the average person.

The only easy way to detect him would be that his boorish attitude would
reappear in someone's posts. That person would also be hiding behind a
pseudo identity. Bill Cheek also can not refrain for long from from greedly
spaming USENET with self promotional posts of things he sells. Don't some
posts here fit that marker?
I don't really care that much as I have other things to do but I mentioned
it only out of passing interest to alert everyone else who may want to play
detective.

7034. Updated! Pro-Turbo New Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1998-09-27 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <360e3008.3133960@news.iaw.on.ca>
Source record: 143036

Web site for downloading back up!

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes 2 groups of 4 user definable meters! Now you can
have that center tune meter that you have always wanted.

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.

You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to have a look, you can get more information
on the program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

Pure BALONEY!

The infraction comes when you transmit with that radio...not when you
take possession of it. MARS and CAP operators all over this country
would be in deep kimshee (sp?) if what you say is true..fortunately
for us..it is not.

>You may be correct, Barry (or not :-) but your post would have ever so

BNSF "Seattle Terminal" dispatcher covers from Black River (Tukwila)
to about Bridge 4 in Ballard on 161.16. This includes King Street Station.

From Bridge 4 north to Everett, and then east to Spokane is on 161.100,
under the control of the BNSF "Seattle East" dispatcher.

Amthrax also uses 160.455 and 160.785 at King Street Station.

MY THEAM:

You shouldn't let a few spelling or grammar mistakes ruin your whole day.

Consider the possibility that the author has a disability like cerebal
palsy and spent an HOUR typing their message with a head wand.

This topic has been brought up many times in my area, and while I have no legal basis for this, here is my opinion. If you used a radio for a LIFE OR DEATH emergency to contact police, I doubt if it went to court you would loose your case. However, it damn well better be a LIFE OR DEATH situation. You could very easily end up loosing your radio, and/or lots of money (fines). Just think about all the strange verdicts courts come up with these days, and it is really hard to try to figure out how they will side.

Dave

No, No, No, and again, no.

There is no rule within the FCC, that prohibits someone from
owning a transmitter that they are not licensed for. None.

If you must persist in handing out obvious misinformation, please
include the quote from the FCC, citing rule number, that you are
obviously mis-interpetating.

If you're gonna post ads for the "new, updated" software every other day, could you at least include the version number so we don't have to keep checking to see if you have actually come up with a real "update"?

No wonder you get so many hits and downloads and so few real customers.

Latest I have is 2.71.

7059. Making of my own antenna

Newsgroup: rec.radio.scanner
Date: 1998-09-27 00:00:00 UTC
From: Tarjei Lundarvollen <tlundar@online.no>
Message-ID: <6ulr3i$56i$2@readme.online.no>
Source record: 143061

Hi, I'm thinking on making my own scanner antenna for the freq. range 118 - 137 Mhz (airplane and controllers). I have calculated that the length og the wave on freq. 125.000 (which is close to the middle of the freq. range I want) is 2.4 meters (240 mm) and the lengt og the antenna will be 2,4m / 2 = 1.2 metres ? And I thinked on use a pipe (metall) to antenna, but how should I connect the wire (50 Omh cabel, it that right for scanners ?) to the "pipe" (antenna), the center of the cabel I think should be conected to the pipe, but where shall I connect the "ground" of the cabel, to ground (a pipe in the ground) or do I have to make som "radials" on the "antenna" (which of course must not be in conctact with the center "pipe" or the center "wire" of the cabel) and conncet the "ground" in cabel to this radials ??

If there any pages on the internett where I find more information about making antennas ?

Please mail me if YOU have any answear: tlundar@online.no

>

To try to answer your question MAlexder, the CE-232 does in no
way allow a blocked scanner to receive additional frequencies. The
CE-232 is a button pushing interface that also has data aquisition. It
is capable on two-way interfacing with the Pro-2004/5/6 models and
one-way interfacing (autoprogramming like the PROgramit interface)
with several other scanners. Since this interface is mainly used with
the Pro-2004/5/6 models, then it is usually the case that where the
CE-232 is installed, then that scanner has the capabilites of
receiving cellular frequencies mainly because the hacker/hobbyist has
taken the time to do the appropriate mods to the scanner to enable it
to scan the blocked frequencies. The CE-232 (for programming and
scanning purposes) can only do what a human being can do when they are
pushing the buttons on the front of the scanner. If the scanner is
blocked then the user trying to program a cellular frequency is going
to get the same error msg on the LCD as if the CE-232 tries to program
it.
The CE-232 is a two-way interface because it also has data
aquisition. The CE-232 basically sits and waits while the scanner
chugs through the frequencies preprogrammed into the scanner. It waits
and listens until the scanner becomes active, the it captures the
datastream that is being sent from the scanner's CPU to the LCD
drivers. It sends this data to the computer where it allows the
software to know what frequency the scanner is now residing on. Since
the pathway between the CPU and the LCD display drivers existed on the
Pro-2004/5/6, then these were capable of having a two-way interface.
The Pro-2035/2042 has a newer design and the LCD display drivers are
incorporated into the CPU. This didn't leave the "tried-n-true" method
of data aquisition that was possible with the Pro-2004/5/6 models.

****NOTE**** This is no longer true though...through quite a bit of
experimentation and some extra circuitry involving a PIC chip, the
Pro-2035/2042 can be used with the CE-232 for a complete two-way
interfacing just the same way that it is with the Pro-2004/5/6
scanners. The first prototype, we captured the data from the LCD

drivers and converted it to the form of data that was evident between the CPU and the LCD display drivers in the Pro-2004/5/6's. This was a major bite in the posterior..but a learning experience. It became evident that capturing the data sent to the BPF switch and the PLL circuitry was much easier and dealt with a lot less wiring. Now the CE-232 doesn't know the difference between it being hooked up to a Pro-2004 or a Pro-2042. Is it worth taking the time to retrofit a Pro-2035/2042 so it works with a CE-232 interface? ...NO. Is this option going to be available as a commercial interest? ...NO. Is the information going to be out there for the hardcore hobbyists? ...NO. Why not?, because there are other avenues and better ways from getting from point A to point B.

The CE-232 was a marvel of its time, but there are other ways in which to doing things which are quicker and more efficient. I searched the internet until the wee hours deciding on the best option in which to control the scanner. I found that the best way was to directly tune the scanner via software on the computer. The CE-232 did not do that, but the OS535 did. The OS535 controls the Pro-2035/2042 model of scanner. There are pros and cons of each type of interface, but I intend to touch on most aspects.

TUNING METHODS AND DATA AQUISITION
Both the CE-232 and the OS535 are two-way interfaces when used with the appropriate scanners that they were designed for. The CE-232 uses a "button-pushing" method to allow the computer to control the scanner and it obtains data such as frequency and AM/FM/WFM from the scanner by tapping into the datastream between the scanner's CPU and the LCD display driver. The OS535 directly tunes the PLL circuitry and the BPF's. It aquires data such data as signal strength, scan stop (detecting a signal), DTMF and CTCSS tones, etc.

AMOUNT OF CHANNELS
The CE-232 uses the frequencies stored in the scanner's memory. If you have 400 channels with the scanner, that is what you have during computer control. If you have 6,400 or a turbo-whopper 25,600 channels, then that is what you have under computer control. The software is the limiting factor for the OS535 computerized setup. A popular program called Probe allows up to 99,000 channels in each file and I do believe that it allows 4,000 files! Need more channels, just kick out the code in QBasic, VisualBasic, C++, etc.

SCRIPTING
One advantage of the CE-232 is scripting...but is it really the interface? No, its just the software. The OS535 is very capable of scripting just the same, its all in the software. It depends on the situation, but take for instance that you have some obscure frequency that you monitor on a regular basis. It doesn't become active very often, but when it does, another 20 frequencies become quite active. If the "flag" frequency is active, you want to be able to devote all of the scanning to these 20 frequencies for a certain amount of dwell

time or until the channels no longer are active. This can easily be scripted with either the CE-232 or the OS535. The problem with the CE-232 is that it has to download these new frequencies to the scanners memory banks or has to switch to a bank that the frequencies are preprogrammed into and shut off all of the other banks. Since the OS535 controls the PLL circuitry, the software can switch over and have these new frequencies ready to go while you are still listening to the transmission on the "flag" frequency.

AUTO-PROGRAMMING
The CE-232 allows the programming of 400 channels, 6,400 channels or even 25,600 channels. It can do up to 999 channels at a time though with current software. I don't know if there is a easy way to switch between memory blocks easily while programming, but it would be an add-on feature. The OS535 bypasses the scanner's CPU and memory chips and is not capable of programming the frequencies into the scanner itself for operation without the computer interface. There is the PROgramit interface which allows you to do that for a resonable price. The PROgramit interface comes in several flavors...serial or parallel port designs. You can piece it together on perf-board or order a prefab PCB. Costs are from approx. $15 - $40. You can opt for external or internal versions if you want to use one with more than one scanner. I have placed several PROgramits in scanners that have the OS535 boards in them already. I like using the serial version of the PROgramit and just tap off of the DB9 of the OS535. You use the same serial cable of the OS535. Just shut down control of Probe, ScanCat, etc. and fire up the software for Probe. I have a external version of PROgramit for programming my Pro-43s and my BC3000xlt. The circuitry of the PROgramit is easy to add to control the memory blocks of a 25,600 channel Turbo-Whopper Pro-2006 so you can program many of them at once without flipping DIP switches.

TRUNK-TRACKING and OTHER FREQUENCY HAND-OFF TRACKING
The CE-232, OS535 and PROgramit all are capable of doing just that. It pretty much is in the software. There are several free and commercial programs for trunktracking for the OS535. There are a few programs that I have seen for the PROgramit and I have heard about a program or two that incorporates the CE-232. As for speed...the OS535 is by far the fastest. Then it is the PROgramit and the CE-232. The latter two tend to take a bit too long to switch over to the new channel to get the complete transmission efficiently.

COSTS AND INSTALLATION
The CE-232 runs around $150 for the kit or $200 for a built and tested interface. You can also put one together by yourself. The Motorola uPU sometimes is a tad hard to find though. The OS535 is going for $180 now. It comes built and tested. There are also other features of the OS535 such as CTCSS and DTMF decoding and s-meter circuitry. While you can add circuits to do this with the CE-232, it just adds to the price and what you have to install. The OS535 is fairly easy to install. You have to nibble out the little bit in the

back of the scanner and make two solder connections and plug in some wiring harnesses. The installation of the CE-232 is described as fairly extensive. The PROgramit isn't too bad and varies a tad with each scanner. I like the serial version which runs about $40 for the parts and prefab PCB. There are some other modules that have evolved with the PROgramit also. One allows for the operation of the scanner with a TV remote control. One that will later be available is a RF module that allows programming the scanner some distance from the computer. You wouldn't have to take the scanner out of the vehicle to have a couple of hundred frequencies downloaded.

VERSIONS OF THE OS535
There are three versions of the OS535. What really differentiates the difference is the programming in the CPU.

(Version 1) Cell-Blocked, Code Enabled. This allowed a FCC Approved or Cellular Technichian to enter a code via software which enabled the CPU to tune the cellular bands. This was the commonly sold version until there were some legal issues. This version sometimes can be picked up though, but not in the CONUS.

(Version 2) Cell-Blocked, Not Code Enabled. The OS535 cannot tune cell frequencies and no code can be entered via software to undo this blocking.

(Version 3) Cell-Enabled. Available to FCC approved or cellular technicians. Has the capabilites of tuning all of the cellular bands.

AVAILABILITY OF DEVELOPER'S GUIDES
What you need to start programming for the CE-232 and OS535 are both available. The CE-232 information used to be downloadable from Bill Cheek's Hertzian Intercept BBS but the BBS is no longer readily available. It may be available from his website, but I don't think it is up and running at the moment. You might have to e-mail him (bcheek@cts.com)and see about the availability of it. For programming the software for the OS535, you can get info from Optoelectronics or Steve Hancock's site at http://home.ptd.net/~pro2006/index.html. You might have to e-mail Steve to see where his CI-V protocol info is hidden at. For programming the PROgramit on your own, you will have to look through the IC datasheets and figure it out for yourself. Information on PROgramit can be found at http://www.qsl.net/ka2pyj/. John Montalbano has some nice software that will do about everything that most hobbyists would desire.

USER DEFINED SWITCHES!!!
Another debated item that has come up is user defined switches. The OS535 already has a tape control switch, but there can be more added to it. The OS535 is an addressed RS-232 module that allows it and 15 other (for a total of 16) devices to be daisy chained off of it. These of course have to be addressable also to make sure you aren't gonna have some 'strange' commands going down the pipe.

Weeder Technologies has a simple kit with an addressed PIC chip that has 12 digital I/O's coming out of it. Stick 15 of them into various projects and you can have 180 user defined switches just ready to go when you need them. Stick on the X-10 home automation module and have every light come on in your house when the tones are sounded for the local fire department...this works like a charm when you are a member of the volunteer fire department. Do you need some other A/D interfaces or projects to go along with this? Why don't you point your browser to http://members.aol.com/ncdcat/index2.html. There are other places to pick up the kits, plans, etc. but these are two that I have used off and on in addition to my own little designs.

RECORDING
While I don't use a tape recorder for unsupervised monitoring, I do use VOX recording through my soundcard. Now while I have been using RecAll, there are a few other programs out there that also have some neat features that will get the job done. Intercept Technologies made a enhancement for the CE-232 called the Vader board. This allowed you to monitor while you were there or away from you shack and record all picked up transmissions. The nice part about it was that it allowed selective playback by channel, frequency, groupings of similar freqs, time of day or duration. Well, in this present day and age things have changed quite a bit. Why don't you let the computer flex some of its muscle and let it handle all of the work. Since your computer program has all of the channel, frequency, duration, ctcss and other bits of information on all of the transmissions that it incounters, then it is very easy to do a dynamic-data-exchange with a program controlling your soundcard. You can easily sort the recorded transmissions however that you wish very much the way you can sort your received e-mails in Netscape or Explorer by sender, date, subject, etc. The .wav file that you create is dependent on the amount that you have available on a hard drive. Hard drives are cheap and when you are sampling at 5.5kHz, you will get a lot more recorded than the VADER board was capable...I think it could only record 1 hour's worth of continuous audio.

WANNA START WORKING ON YOUR OWN INTERFACE?
Go to http://www.boondog.com/ and you can make your own to decode info sent from the scanner's CPU to the PLL circuitry. Get the PLL IC info's and then do the math and the programming. It would be a nice winter project.

We have 2 mint condition IC-U400 Modern Heavy Duty UHF Mobile Transceivers Dimensions: 6.7 (W), 2.0 (H), 10.2 (D), 5.7 lb 35W output power 5 W audio output (with a 4 ohm load) 440-480 MHz +/- 16 programmable channels Includes Built-in CTCSS Tone Encoder/Decoder Normal scan and priority scan & HM-35 standard hand mic $300.00 each + Shipping

Click Here For A Picture Of The U-400

We also have one HM-37 Heavy duty commercial DTMF mic for these radios, $50 with radio purchase only.

Lastly, we also have one example of the U-400's predecessor avaliable, although it's a bit banged-up, it does work

-Icom IC-435 16 ch. 35W commercial UHF Mobile 453-470 Mhz band w/ CTCSS, mounting bracket, hand Mic. This rig covers 453-470 Mhz. It's field programmable, you don't need any programmer equipment other than a soldering iron and some tools. It's fully PLL controlled, so you don't need to buy xtals. Programming is a bit time consuming, though. There are two diode matrices. One for TX, one for RX. The frequebcy for each, on each channel is decided by installing little diodes in a certain pattern. I'd supply the instructions. The PL encode/decode scheme uses a standard TSU-32 board, so there is 5 solder pads, the tone is decided by which pads are connected, so no matter how many channels you have programmed into the rig, you can only use one tone. No hand microphone $50 + Shipping, or additional shipping cost only if buying a U-400.

Interested Parties, please E-mail to mw@hula.net

yes, in a true life or death situation, any reprocussions later really wouldn't matter, however, there are a lot of people that have kinda funny definitions of Life or Death, and you can pretty well bet, that it better be a TRUE L or D situtaion.

I'm trying to figure out if I can safely use my mobile scanner antenna for transmitting on 2 meters.

The antenna is manufactured by "Everhardt Antenna" and is marked "Tiger". The black fibreglass mast is approximately 2 feet long, with two loading coils which appear to be part of a continuous single wire wrap under the rubber coating.

It is a great scanner receiving antenna, I'd like to use it on 2 meters. The repeaters I'd like to work are coming in full quieting.

Anyone used this antenna as a transmitting antenna for 2 meters or 440?

Thanks,

Michael

Message-ID: <vQvP1.6764$RC5.6064508@news.rdc1.bc.wave.home.com>
Source record: 143067

The rail that is used on that track is most likely CWR (continous welded rail) this type of rail must be installed during the optimum tempurature to allow for expansion and contraction. The rail when it gets cold is more subject to breakage and during the summer it can heat up and cause what is known as SUN KINKS. Im not sure but I will make the assumption that what you are hearing is a radio transmission from a detector that reports to maintainers what the condition of the rail is. This will save them time and labour cost to physically inspect the rail. Hope this helps.

Trev.

7067. Problem between Optoscout and AR8000?

Newsgroup: rec.radio.scanner
Date: 1998-09-27 00:00:00 UTC
From: gameye@aol.com
Message-ID: <19980927150542.20648.00002748@ng88.aol.com>
Source record: 143069

My Optoscout and AR8000 has been working perfectly until today. AR8000 settings seem OK and states"Remote" when cable(socket) is plugged in, Scout set to filter/capture etc, checked continuity of cable, OK, but comms between the two just isn't happening.

Any suggestions as manuals for both have few instructions for reaction tuning.

Cheers, Gameye

7068. Pro-25 cell unblock

Source record: 143070

Hey all-
I was looking in my pro-25 scanner yesterday, and I
saw the board marked
"800 mhz unit" made by uniden, and saw three
jumpers on it. Don't those
control the blocked out cell freqs? couldnt one be
snipped to unblock
cell? Anyone tried it? I'm really annoyed at all
the freqs RS blocked
out on this unit. Thanks-

Greg

7069. Sad news for Monroe, CT CB/scanner shop. RIP Ethel

It was a depressing weekend when I went to my local CB shop, Herb's
Electronics in Monroe, CT, and heard that the owner, Ethel, had passed away
suddenly on Tuesday.
I was shocked, I was there just last week and she looked great.
Unfortunatly they are now selling out everything (not much left, they sold
alot on Sat. morning, really good prices too), and closing the shop for
good. To bad, they were the best CB shop around and really nice people.
Now have to find another good shop around CT area.
My condolences to the family, and especially Don, Nick, and Mike; Good luck
to you guys.
Rest in Peace Ethel

Source record: 143075

After a lot of thought, I've decided to sell my beloved PRO-2042 scanner in order to raise some dough to buy a high-end Icom. The PRO2042 has been very well cared for and is in immaculate condition. It has been modified with an Optoelectonics OS535 and PROgrammit interface; the discriminator has been tapped as well. The installations are neat and professional in appearance. This package also includes software for both interfaces.

The PRO-2042 has 1100 channels (1000 in 10 banks and 100 monitor channels). It scans/searches at 50 channels per second. Frequency range is 25 Mhz to 1300 Mhz with the usual gaps; covers AM, FM, WFM. Lots of other features. For a review of this scanner, go to www.strongsignals.com.

Optoelectronics OS535 decodes CTCSS, DMTF; and imports files from most popular FCC databases. Scan/search speed is 80 cps. Frequency range is 25 MHz to 1300 MHz and is almost continuous. The interface--which was purchased from a Canadian retailer--is capable of tuning cellular frequencies without need of having to enter a "unlock code" or use special software. This interface is no longer available in the US and I paid a premium to acquire this particular version. For more information about this interface, go to www.optoelectronics.com

PROgramit interface enables you to automatically and quickly program the scanner's 1000 channels, giving you unparalleled flexibility to set up the scanner any way you would like when you don't need or wish to use computer control. For more information about PROgramit, go to www.qsl.net/ka2pyj

The discriminator has been tapped as well and allows you to decode POCSAG and many other signals.

The package also includes Probe 3.0 software (DOS-based), arguably the best software on the market. The program allows you to set up 4000 groups consisting of 99 banks with 1000 frequencies in each bank. What that means is you can create thousands of virtual scanners, each with it's own unique "personality." The software also enhances the scanner in several ways, beyond what the scanner itself is capable of, such as faster scanning/searching, alarms and so on. If you want to know more about Probe, go to home.ptd.net/~pro2006/index.html.

I bought the scanner about three years ago (the Opto was installed about a two years ago; the PROgramit was installed about one year ago). It hasn't been used excessively. I can't estimate the number of hours because I have a number of scanners that I use but like I said, it is in like-new condition and performs flawlessly in every way. The package includes all documentation (including some extra info that I've collected off the Net) original packaging materials, accessories and boxes. I paid close to $900 for this bundle back in the day. I'd like to sell it for $600, including shipping. If that seems out of line, make me a best offer. I will reply to all serious offers.

If your Wards BC220-clone works ok and has a bright display,
I wouldn't replace C98 just yet. Each time you heat the foil,
there's a chance it will lift off the board. It's happened
to me :-(

Preemptively add heat sinks to the power transistors
and regulators. You can make a simple heat sink
from a pair of solder lugs and affix it with a machine screw
through the hole on the transistor's mounting tab.

Hope you can locate the proper Chromerics keypad to replace
the worn pad.

>Could someone tell me the correct way to handle this system?

The 50 ID per bank limit is a fundamental limitation of the Bearcat/Radioshack trunk trackers available now. The best soulution is what you are allready doing, organize the groups in the most logical fashion you can ie by service or area and off you go!

In Dallas we have the opposite problem. We have 311 and we can't get
the citizens to stop calling for emergency situations. We get 311 calls
regarding fires, prowlers, medical etc, etc,
etc...

Here in Florida a man kept calling 911 when he should not, and when he
called 911 to report is toilet overflowing, they had enough and he went to
jail for a short while.

I have a Relm HS 200 handheld scanner. Seems to work very well, and I found it on the net for only $179. I was wondering if anyone knows of any modifications for it to receive any additional freq's. I have been told that the mfg. has made it so it can't be modified at all. Does anyone know if this is true? Thanks for any info in advance.

They used to sell baby monitors that transmitted through the house wiring, before the 900mhz band was allocated. Maybe they still sell them somewhere, or maybe you can find an old set at a swap meet or something (Radio Shack was one company selling house wiring, "wireless", baby monitors.)

YES ...thats possible, there,s a modification for the pro43 ,so that the
keylock switch does the job.

There must be added a diode and some wires thats all.

Search for "PRO43-Modification" in a search engin and you will find it.

(I will try to find it for you in meantime)

>to have the "Look and Feel" of a public safety officer, ya gotta use'em.

Er, uh... Sorry Ivan - not really!

The primary reason for using codes was aural brevity.

Among the more well-known were the "10-codes". While there are a host of such in use (most agencies having their own), there were **very early** efforts by APCO (now the Association of Public Safety Communications Officials, International)

http://www.apcointl.org ...to standardize at least some of these.

A sampling of the original codes can be found in many places on internet, including

http://aosc.rpmdp.com/apco.html

There has been a movement afoot for quite some time to return to "clear-text" whenever possible. Progressive Fire Departments have been supportive of such efforts for decades.

Among the most outspoken advocates of clear-text was my good friend, the late Stan Harter. A bit of interesting history about this legendary man and his exploits (many of which you may take for granted) can be found at:

http://www.apcointl.org/bulletin/bull/november/historical.html

While it is doubtful that clear-text will replace all codes, it is an admirable effort to do o when possible.

Just FYI, this is does seem to be a new frequency this year, however it has been used at every show this year that I've heard about. That's unusually consistent for them! Anyone listening at Travis, Tucumcari, or their last show of the year, at Fort Worth, should check 272.1 first.

The AOR AR8200 I tested (S/N 550004) in the Oct 1998 issue
of Monitoring Times magazine was fairly deaf on shortwave using
the supplied rubber antenna. You really need to connect
it to something bigger, like a hank of wire.

>and I assume that little bar in the Picture is a Ferite
>antenna.

Yes, it's used for AM broadcast band reception.

Ed--

See the list at
http://w5gb.nmsu.edu/kc5kto/localfrqs/northcarolina/outerbanks.frq

I was in the Outer Banks over labor day, and many of the frequencies on this
list were active.

Hope this helps!

W.G.S.:

I own a BC235, and I bought my brother the 895 for his birthday. The 235 is a great scanner for portable use, but the 895 has so many more features, better audio, and nicer display for the same money. I don't think either of them is more sensitive than the other, or at least enough that it would make your reception drastically different.

Happy listening...
Andrew Clegg

Just to add my 2 cents worth...

The cell unlock code for the 2035 using the Opto 535 board is:

275 681 149 364 630 538 49

according to a previous post on this group, which referenced Monitoring
Times. I have not tried it.

Cheers,
Andrew Clegg

Of course, these numbers mentioned that approxiamtely 24 of your 2139 posts
were "on topic." The rest were harassment. And they don't even count your
forgeries and rogue cancels.

While Cheek's "on-topic" posts were around 1500.

(You shouldn't have snipped that part of the data off in your reply. We're
only going to point it out to you and everyone else.)

You friggin' loon.

7132. Sears 5-bander Question/help

Newsgroup: rec.radio.scanner
Date: 1998-09-28 00:00:00 UTC
From: HP Authorized Customer <joe@user.com>
Message-ID: <6uo8ms$4mc$1@fnord.systemsoft.com>
Source record: 142916

I picked up an old Sears 5-band scanner. This is the unit that programs off of 'cards' like the SBE Optiscan, only with a different algorith.

I got the thing working, and even found a punch that lets me make cards from heavy paper stock cut from hanging folders. But I found that I can only go about 1 meg or less below each band. Since 2M is more than this below the stated range of 150-170, I wanted to know if anyone had any info on the scanner, like how to set the VFO to the bottom side. I can get a little into the UHF band, to maybe 449, but that's it. That's how I know I can get there. (The scanner uses 150-170 for everything, mixing down to 30-50 or up to three UHF ranges, the lowest one being 450-470.)

Also, the unit will not stop on squelch break. It appears that the squelch break sends a signal (or is supposed to) the to switch-board that sets the scan/step. But to pull the board up to trace it back looks to be a bear.

I have no schematics. Can anyone correct that?

Because there is less chance if being misunderstood with the codes. Short
and too the point. Police radios can make speach hard to understand at
times and lives are litterally at stake so the clearest method of getting
the essential coms across are used.

Despite the trunked system, I found NO to be a very good scanner town. I spent half of 97 down there with a 3000 and a 9000 and found scanning to be verrrry interesting. Better than anything I ever heard in my 8 years in Atlanta.

Wonder if the storm will indeed take out the trunked system.

Obviously you haven't download as the latest version is 3.02, but I
will now ad that info to my posts here

7139. Updated! Pro-Turbo New Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1998-09-28 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <36101361.3064577@news.iaw.on.ca>
Source record: 142936

Web site for downloading back up!

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes 2 groups of 4 user definable meters! Now you can
have that center tune meter that you have always wanted.

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.

You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to have a look, you can get more information
on the program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

VERSION 3.02

7140. Re: Why do police use codes?

Newsgroup: rec.radio.scanner
Date: 1998-09-28 00:00:00 UTC

Actually, brevity was the primary reason for initiating codes many years ago. Unfortunately, many officers can't seem to get the hang of it. For example, here in Tampa the code 10-20 means "what is your location." Yet over and over again I hear officers asking "what is your 10-20." That's like saying "what is your what is your location." It blows the whole idea of keeping it short and sweet. In many areas the departments are switching back to plain speech 'cause there is less chance of a misunderstanding.

Don't know about Lake Wildwood but here are a few frequencies for
law enforcement and fire:

NEVADA COUNTY

39.7600 Dispatch
39.3400 Sheriff
45.1800 Sheriff
45.2200 Grass Valley
45.7800 Grass Valley
46.0200 Grass Valley
153.9650 Fire Primary
46.1600 Fire

STATE AND FEDERAL FIRE

151.3250 CDF Primary
151.2500 CDF TAC 5
151.2800 CDF AIR BLUE
168.7750 USFS
170.5750 USFS
169.1250 USFS
419.1500 USFS
419.6500 USFS

CHP GREEN

42.540 42 GRASS VALLEY
42.240 44 PLACERVILLE & 45 NEWCASTLE

CHP GREY

42.480 13 S. LAKE TAHOE
42.680 70 GOLD RUN & 80 TRUCKEE

These may not all be good frequencies but they'll give you something
to play with. Happy scanning.

Krypt,

• NOw i need to make the 4 level interface to work.
• I have seen at least 3 versions of schematics. Does anyone know (or
• have) a lyout that works ? One i tried to put together is at
• www.qsl.net/pa3eik/4lev_fsk.html.

I got a URL not found on this server error! Is this good or what?

The channels art the 40 CEPT Channels
Please tell make and model for we can check it out.
But I think its not to modify to FM mode.
There are lots of FM-models over here in Europe you can modify to AM / FM and
more channels.

Make this handheld a gift to your enemy :-))))

>your what is your location." It blows the whole idea of keeping it short and
>sweet. In many areas the departments are switching back to plain speech 'cause
>there is less chance of a misunderstanding.

The local department uses 10-3 and 10-4 almost interchangeably. I
can't tell the difference.

Everywhere I've been, a 10-50 is an accident, with J-1, J-2 and J-3
meaning the severity (minor fender bender, property damage, passenger
injury). A couple of months ago I passed by an intersection just
seconds before a multiple-fatality accident. The ambulance company
arrived and wanted to send another ambulance, but the EMTs on the
scene said there were two code 3's and three code 4's. I knew the
code 3 was injury and from their reaction, figured out the code 4 was
fatality. They said the code 3's were "code yellow" and "code red"
which I took to mean severely injured and critically injured. I later
found out that the critically injured passenger died en route to the
hospital less than a mile away, so by reading the paper and
correlating that with what I heard, was able to figure it out.

Another 10- code, which I've momentarily forgotten, relates to drug
activity. Let's say it's 10-63 -- the dispatcher will say, "Caller
reported suspicious activity, possibly 10-63, J-x", where "x" is a
number, maybe pot or cocaine or heroin.

Of course around these parts it's most likely meth.

postings...

one can also think that
the posting a price which
a new unit sells for vs.
the price they are asking
may give them an idea of
what to charge....most
people don't keep up on prices
and wonder why their unit does
not sell...

...this way they can come down in
price seeing as how it's a used set.

it's called a public service announcement.

it's called just not taking the NG or any
NG all that seriously.

it's called free exchange of ideas.

it is not immaturity or whatever you
haraunge us about being...it's just
the nature of people who see and yet
think about what they read and have
a thought or two about the price.

it's part of the fun of being on the NG.

no one is being hurt and no one is calling
them names as you are to people you know not
their motives for posting prices you see after
the facts are seen...

...mellow out. just let the sentences form
and if you disagree, fine. but to label people
immature or police-cops and the rest of the
mumbo-jumbo stuff you assume them to be is
an indictment about you.

allow what is to just happen.

7170. Re: 160.920 recorded message by newhaven rail yard

Newsgroup: rec.radio.scanner
Date: 1998-09-28 00:00:00 UTC
From: Karl Sollmann <jaxrail@usit.net>
Message-ID: <360FB0AA.86A@usit.net>
Source record: 142967

Not only do these devices check for overheated axle bearings, historically known in railroad slang as hot boxes, but they may also check for dragging equipment [i.e.- broken brake components, wheels off the track].

Another unique function is to check for what is known as shifted lading. These detectors are sometimes found at the approaches to bridges and protect the structure from loads that have shifted during movement. A scenario might be a load of pipes on a flat car- the banding that holds the pipes intact on the car may break and cause the pipes to extend off to the side of the car. A major problem could develop if the pipes were to strike the bridge, causing a derailment and possibly damaging the bridge itself.

Depending on the railroad, defect detectors may have other functions, including axle count, length of train, temperature, speed of train, direction of movement and identification of track being used [in multiple track territory]. Many railroads include a short safety reminder at the end of the readout, such as Have a Safe Day or Think Safety. Female as well as male voices are used for the voice report!

I think what most people are getting at when they ask if a late model scanner can be "modified" for the missing 800 freqs is "can they get the scanner to display & accept from the keypad" those missing 800 freqs .....and of course the answer is NO. This goes for the PRO 64/90/26 & most all scanners built after April 1994 with one or two possible exceptions (the AOR AR-8000 was one notable exception untill the FCC got "wind" of it & required AOR to re-work the scanner into the newer 8000B version)

Here in Phoenix, AZ the Phoenix Police use, I could be wrong, three types of codes. "Code 4" is used as an all clear sign. I don't hear many of these "Code XX" codes. "10-20" is used for location (10-xx codes seem to be used for officer related activities). "961" is minor traffic accident, "962" is accident with injury, "963" is accident with fatality. "918" is a person with mental problems, "390D" is a drunk driver. Most of their codes fall into this type. They also use "101" instead of "female" but they use "male" for a male (what is up with that?).

Makes it hard for me to follow sometimes. Also the Maricopa County Sheriff's department and State Patrol use different codes.

Just my $0.02

Simply untrue. No license of any sort is required to own a radio transmitter of any sort in the US. Ownership without a license is not an offense (or offence either). Transmitting without a license for the service involved is an offense (and an offence also if the signal is heard in Oz).

If were talking about a 40 channel am mid rig, then its very illegal to own, let alone use...
Do yourself a favour and bin it.....Dont try selling it, because if you choose the wrong person ????
If you keep it, then hide it well, but the chances are, that it probably will never become legal !!!!
Dont get caught using it !!!
As for making it FM, again the chances of finding a dealer willing to have it in his shop to do the work is very slim due to its illegal nature.... It would probably be cheaper to buy an FM rig than to have it modified......
Hope i've scared you enough, but i'm sure most will agree
!!!!!!!!!!!!!!!!!!!

The BC895 is a base model, with several more features than the Rat Shack version. The best price I've seen for the BC895 is $220, from an outfit that wants $20 for shipping. My unit is mint--as nice as it was the day I got it and it includes box, docs and accessories.

I guess you're confusing this with the BC235 handheld, but it's hard to say. It doesn't appear that you know what you're talking about.

>

I live near Radnor Yard in Nashville, TN, and hear these things all the
time.
They are called "hot box" detectors, and count the axles of the trains as
they
come and go. Hot axles signal that a bearing is going bad and that
particualar
car is usually pulled out and sent for service. Had one of the yard
supervisors
show me the detectors on one of hte lines going out - just a box on either
side of
the track pointing back toward the center of the tracks so it "sees" the
wheels
of the cars as they go by - connected by a cable to a transmitter nearby on
a
pole with a whip antenna. Pretty low power device from what I can tell.

good listening

>for their right to monitor. The government works for the majority! SPEAK UP
>AND BE HEARD!!!!

The government works for the MONEY.

Although the tide may be turning. The radio station where I do some work hosted a national talk show host over the weekend. She knows EVERYONE in Washington. She was talking to a bunch of congresscritters from both sides of the aisle and said a lot of them are getting scared because their constituents are starting to pressure them to GET TOUGH with Bill Clinton (don't let him weasel out), the economy, tax cuts, etc. They're starting to ignore the loudmouths in the media who call them "heartless" for cutting spending and such. It was a real eye-opener, and not at all what you hear from the mainstream media.

Want to find those hard to find frequencies in your town. go to

http://homepages.infoseek.com/~noshoot/noshoot.html

there under the "Percon Database Search" link just type your city then your state and then choose the radio service code and hit search. you will get a list with the service, frequency, and call sign.

thanks
noshoot

7194. Pro-64 Question

Newsgroup: rec.radio.scanner
Date: 1998-09-29 00:00:00 UTC
From: eudorwelt@aol.com
Message-ID: <19980929095456.07837.00003473@ng17.aol.com>
Source record: 142782

I have a RS Pro-64 handheld scanner. It works great on all bands,except
for the 108-138 mhz civillian aircraft band, wich really sucks, wich is very
suprising, since I live right in the core of Manhattan. What really suprises me
is that I can pick up the Suffolk County cops on it as clear as a bell with
only the stock rubber ducky antenna, and thier repeater is a good 75 to 100
miles away.
Why would I be able to recive them with no problems, and not be able to hear
the JFK control tower, wich is much nearer to me? I know the scanner isn't
busted, as I can pick up the occasional aircraft in flight, with no problems.Is
there a simple
mod i can perform on it that will improve my aircraft band reception?
Thanks in advance, and 73's,
KB2ZYO/Lumzilla 67/Sailor Goon

Hi everyone!
I've got a Uniden BC-3000XLT for sale. It's about 6 months old and still
has the warranty card and all docs. It hasn't really been touched at all
and it is in perfect condition. I'm selling it with a desktop charger
from Grove and a car charger too. I'll sell the both of these for $300.
I paid about $345 for the scanner alone. Money order preferred in advance
and I'll ship it priority mail. Email me if you are interested.

7197. FS: PRO-2004

Newsgroup: rec.radio.scanner
Date: 1998-09-29 00:00:00 UTC
From: Paul Knight <paul.knight@prairiecomm.com>
Message-ID: <6uqvb1rge1@eve.enteract.com>
Source record: 142785
Cross-posted to: rec.radio.swap,rec.radio.scanner

Howdy! I have a Radio Shack PRO-2004 base/mobile scanner for sale.
Some specs:

400 channels
25-520 MHz & 760-1300 MHz (cell unblocked)
AM/FM/WFM modes
10 programmable search ranges
auto-store of 10 frequencies found while in SEARCH mode

The unit works perfectly, and is in good cosmetic condition; the only flaw is that the previous owner poked some small holes in the keys on the keypad, don't ask me why!

The only mods performed on the unit were to unblock the cellular band, and add 100 extra channels (from the stock 300 to 400).

The unit includes the manual, box, and a small whip antenna. I also have a 3rd party book which describes additional mods and things for this family of scanners. There is a plethora of information about the 2004/2005/2006 series scanners on the Internet, as it is one of the most easily modified units on the market.

$150, and I'll meet you somewhere in the Arlington Heights or Woodridge/Downers Grove, IL area for the exhange -or- you pay the shipping costs.

Please drop me a note if interested.

73,

Paul WD8DKY

In my area of California, fatalities are called 11-44 (Coroner's Case).
About 5150, that is the California's Welfare and Institution Code for a
person that is a danger to them self or others and are put into the
custody of mental health authorities for up to 72 hours. This can be
extended for an additional 14 days with 5250 W&IC proceedings.

I would like to trade a mint condition (No Att) Pro-62 Triple Conversion Radio with manual and box for the Pro-43 and maybe like $30 for the trade. If you would consider this offer please email me.

Thanks

Matt KD4BKU

Consider that the stock antenna is probably more suited to the
frequencies
used by Suffolk than the aero comms. Also, the Suffolk transmissions are
probably much high power than the tower.

Get a better handheld antenna (for aero freqs that would mean something
longer)
or go with an external antenna connected via the shortest run you can
make of
high-quality, low-loss co-ax.

Good luck!

I think police, fire depts, etc. need to do a better job of publicizing their 7-digit non-emergency numbers. They give out all these stickers, refrigerator magnets, and other advertising material saying " In an Emergency, Call 911". Not one of them had the non-emergency number printed on them. They could put it in smaller print below the 911 stuff.

About 2 years ago my wife was an hour or 2 late returning from a trip, and since we had been having trouble with the car recently, I wanted to call the Highway Patrol to ask if they spotted her car broken down onthe interstate. I looked for the 7-digit number in phone book, and its listed under some heading like "justice department". I called and I got a hospital instead. The number in the phone book was wrong, and the person at the hospital didn't have the correct number. Then I tried 411 (information) They had lots of numbers " Do you want Barracks B, Barracks C, Sergeant Joe's office...." I finally got through, but I was mighty tempted to give up and call 911.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder

on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board. |

PRO-7A: Channels 1 - 4 or 5 - 8 Dead |

If the first or last 4 channels in your 8 channel PRO-7A | crystal scanner are not working and the lamps for those | channels won't light, replace IC4 or IC5 (type 7400A).

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the
RCMA Newsletter, December 1988. It may not be reproduced
in whole or in part on CDROMS, in bulletin boards,
networks, or publications which charge for service without
permission of the author. It is posted twice monthly on
the USENET groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is
difficult to use because of too much hysteresis. The
American Heritage Dictionary of the English Language
defines hysteresis as the:

o "Failure of a property changed by an external agent
to return to its original value when the cause of the
change is removed."

It's like having play in a car's steering wheel, or
backlash in a gear set. Too much hysteresis in a squelch
circuit forces one to keep the squelch at a tighter
setting, missing weaker signals when scanning or searching.
The squelch hysteresis problem was first addressed in a
1984 article about the Radio Shack PRO-24 crystal
controlled scanner.

Why do engineers design these circuits with any hysteresis?
Basically, hysteresis prevents weak signals from "popping"
the squelch open and closed rapidly, which would be very
annoying to the listener. A squelch circuit with hysteresis
requires a stronger signal to open the squelch than it does
to keep it open.

Models cursed with too much hysteresis include the
Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003,
PRO-2004, and others. Don't despair, the fix is simple for
most radios. I've successfully reduced the squelch
hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner

owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855. email rlassoc@inav.net

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

last updated September 14, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

OCTOBER 1998

Oct 4 (Sun), Wheaton, IL - Giant Computer show (see below). Dupage County Fairgrounds.

Oct 11 (Sun), Orland Park, IL Giant Computer Show & Sale * (see below). orland Park Civic Center.

Oct 17 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

NOVEMBER 1998

Nov 22 (Sun), Wheaton, IL. GMRS Electronics Flea Market. Dupage County Fairgrounds. Sponsored by GMRS of Illinois, Inc. Admission $5. Kids under 12 free. Open for setup at 6:30 AM. Building doors open for buyers at 8 AM. Info: (815)756-3933 or (630)393-3937.

Nov 28 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

DECEMBER 1998

Dec 19 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, and anything else in the domain of computers! Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet of everything Computer! For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

G & G Communications
9247 Glenwood Drive
LeRoy, NY 14482.

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than 70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. This article describes a few of the FM receivers in my collection, and other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Aug 1998 - Sony SC1PC portable

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally

generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot

be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be

arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service

Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older

Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as

federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during

search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby

SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other

owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are | specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique

frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout

Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs --

lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in | MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, |

and 0.455. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan-nels	VHF low	VHF high	UHF scans?	lock-outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a

task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP

transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas

Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 fee for 200 hours use of the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83
and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

Nothin' like the voice of authority. Thanks for the clarification on the 5150 code. It's a "cut-save as" keeper.

Thanks.

7229. Pro-2003 Not Receiving

Newsgroup: rec.radio.scanner
Date: 1998-09-29 00:00:00 UTC
From: Winston Smith <winston@psicorps.com>
Message-ID: <36116f67.0@news.bwave.com>
Source record: 142817

I have a Pro-2003 that I pulled out of the closet and am trying to use. The problem is that all I get is static. This is the case using the telescoping antenna that came with it as well as a large external antenna. I have tried scanning various frequencies to no avail. All I get is static.

I get reception fine using a different scanner so it is not my area or the antenna.

Any guesses as to problems I can check for?

Thanks in advance.

The above URL does NOT lead to an "excellent Scanner web site". In
fact, it does not lead to a web site that has much to do with scanners
at all. It is a website where descrambling equipment (which is
illegal to possess and use in the United States) is offered for sale.
It also appears to be the poster's own money-making business. The
messages posted in this newsgroup extolling the virtues of this
website are invariably posted by people connected with the business.
It is advertising, nothing more or less.

Why?
So he could navigate the keyboard without lookin' at it.
Perhaps better to make a plastic overlay for the keypad
and holepunch strategic holes in it, say over the
SCAN--------SEARCH^-------5 keys. Before you know it
you'll be playin' the '04 like a beancounter on a HP.

I have a Relm HS200 scanner for sale. I bought it for the nascar races and it did
the job well, but I don't need it anymore since my wife got me a new race scanner
from radio shack. I have all the origional equiptment it came with plus a set of
headphones that work great at the track and long life nicads with a 3 hour
conditioner/charger for the batteries. The radio is in great shape and has only

been used a few times. The scanner has 200 channels and a built in tone board,
signal strength meter, and a backlit keypad.The scanner also receives CB radio.
The price is $150 shipped. Please email me if interested.

Thanks
Tony

I have noticed most all fire departments I hear (locally & when
traveling) use clear text. I have not heard any police agencies using
clear text.

Here locally 10-10 has 3 different meanings for 3 different agencies.
City police 10-10 is a traffic stop, county sheriff 10-10 is a coffee
break, and CHP 10-10 is off duty.

Gotta love it ... makes listening interesting ...

Maybe so in CA but for the most part here in OH they used them out of
tradition. Back in the late 1970's and early 1980's the APCO propsed to do
away with them. This stirred up quite a debate amongst the Law Enforcement
community's Chiefs. Our chief and his cronies view point was they had been
around for a zillion years and should stay.

Basically, like every issue brought forth on the internet news groups this
is one with many answers (plus the experts to go along with them) and none
are totally wrong.

Please read part 97 again. It doesn't cover radios or frequencies used under
different services. Just radios and frequencies under part 97. Don't add
more to part 97 than what it covers, HAM RADIO.

Susan,
Both are quite similar with respect to reception. The BC895 offers
more
"bang for the buck" with S-meter, CTCSS decode/search, weather alert,
rotary tuner and computer control.
The bigger issue would be whether you want the portability of a
handheld or not. Unless you really want to take it with you, the 895
will be a good choice.
I have reivews of both radios that you should probably read. Start
at my site listed below. For your questions regarding range, see my
New Scanner Users FAQ : http://www.strongsignals.net/htm/new_user.htm
And since we appear to live in the same county, you might also want
to poke around my site to dig up the frequency lists for our area which
will come in VERY handy once you do have a radio in your possession.
Best of luck!

Strong Signals,
Rich Wells N2MCA

No. Not going to happpen. Other than the North American cellular
bands, all band step sizes are fixed in the 43's firmware.

The only way to get different step sizes is to program the PLL's
directly.

Cross-posted to: rec.radio.scanner,az.general

Anyone here in Arizona heard anything more about MCSO (Maricopa County Sheriff's Office) moving to a 800Mhz Digital radio system sometime next year? The Town I live in is unfortunately looking to contract with them for Police services, and if the deal goes through we will be abandoning our current radio system and using theirs. From what I have heard, MCSO will have a new "high tech" radio system capable of dispatching Police & Fire. I know Maricopa County already has a 800Mhz system (used by the jails, and a few other cities who contract). Just wondered if Sheriff Joe's boys will be "unscannable" by using digital and or digital encrypted radios.....

Now all you people know how it was
when people tried to tell HITLER
not to kill the Jewish people.
he got the idea in his head and
formulated an excuse and on he went
doing his thing.

afterwards the act of killing became
almost a religion with Hitler...same
as with mackey..and Bill Cheek.

amazing how Mackey uses "obliviousness"
to the extreme and eludes all that
is factual. What a similar mind-bent
with what Hitler saw.

Mackey has no conscience. He makes one up.
So Hitler had no conscience. he made one up.
Then he slid in and the fit was right. so with
mackeral...he slid in and he's stuck within.

7276. ****TRADE: TWO MOTOROLA SPIRIT VOICE PAGERS****

Newsgroup: rec.radio.scanner
Date: 1998-09-30 00:00:00 UTC
From: teenham@aol.com
Message-ID: <19980929224240.12615.00001197@ng10.aol.com>
Source record: 142836

Hey,

I have two Motorola Spirit Voice Pagers (dedicated frequency recievers) for trade. Both include special "custom size" Rechargeable NiCad batteries, one "drop in" charger and one "non-drop-in" charger (the non-drop-in charger can actually charge two batteries at the same time, but you must first remove them from the receiver. The drop in charger is a single reciever charger, but you just drop the pager in and it charges--- no removal of battery.) I'll include both chargers, and of course both belt-clips. Both units work great, and and are in good condition. Both are currently set to 138.325 MHz. I have been told there is a way to change the freq to anywhere from 136-165 MHz (+ or - some) by doing some modification to it, but I just don't have the tools or knowledge for it. Would be usefull for monitoring a 2m repeater, or maybe a fire company freq when all you need to do is listen. WHAT I AM LOOKING FOR IN A TRADE: The 2m amp that RadioShack just cleared out for $29, a glass mount 2m/440 antenna (non-used, of course,) a small base 2m/440 antenna (no home-brew's please,) cheap frequency counter, or just about any other ham radio related item. All offers considered. (In case you're wondering how much these recievers go for, last weekend a person at a hamfest was selling a pair of them for $45 without any charger and one battery.) *ALL OFFERS CONSIDERED* Please drop me an email.

SCANnorCAL is a new mailing list "reflector" covering the radio scanning hobby...25 MHZ and above...for Northern California, roughly defined, for now, as north of the Tehachapi Mountains...so it really includes what most Californians would call Central California as well. GENERAL GUIDELINES Our primary emphasis is on governmental frequencies at all levels (local, state, federal) including police, fire and EMS; business radio, railroads, etc.

It's similar to several other "scan-l" type groups, but a bit more open than some to radio "trivia," history, etc. To subscribe, go to: http://www.onelist.com/subscribe.cgi/SCANnorCAL

This is correct. The new models of the 760 are not modifiyable for cell.
The cpu is programmed with the cell freqs deleted from the factory.

Hi

I live in Mississauga/ON/Canada and have been into scanners for the past year or so, yet the only "stable" signal I seem to be getting is the St. John's ambulance in here.. the police is all trunked, the fire dept I can only get the dispatcher every once in a blue moon, cell phones and wireless get boring . . .

Now, this seems like a weird question.. but anyone else around this area came across some interesting frequencies to listen to ? (not necessarily amb/pol/fire)

Feel free to email me in private if you don't want to clogg up the newsgroup.

Thanks a lot in advance.

It would be more accurate to say that crystals designed for
Radio Shack scanners will not oscillate on their design frequency
when used in a Bearcat scanner.

Buy, you *can* order both styles of crystals through Radio Shack.
Each store has a looseleaf binder containing pages of crystal
lists for each style scanner. The pages list frequency
and stock number.

I ordered a batch of crystals for my Bearcat scanners through
my local Radio Shack store. They arrived at my home in
about a week via US Mail.

I need to attenuate the signal [~46MHz] from an antenna so that I only receive a nearby transmitter. The attenuators I've seen for sale [both in-line & varible type] only offer ~20db. max. attenuation... I figure I need somewhere around 100-120 db. for my purpose... I already used 4, 20db. [in-line] attenuators... this was not enough, & I've run out of space..!!

Can the signal be attenuated by a resistor [capacitor?] at the antenna/cable connector..??... is there a formula for this..??

any help is appreciated... Rob.

The normal fix usually involves doing some grounding. You see, the shield braid on the coax doesn`t "shield" anything unless it is connected to a good ground. This is easier to achieve than one would think. The first thing to do is see that the chassis of the scanner (or the shield of the coax) is grounded. Take about a three - foot piece of wire and look at the scanner. If there is a screw on the back that can be loosened up, you can connect one end of the wire under the screw head. (If you can use less than 3 feet, all the better) You would then take the other end of the wire and loosen the screw that holds the face plate on a nearby wall socket, and put the other end of the wire under it. Re-tighten.
If the scanner has no screw that can be used for this, or the screw on the scanner is not hooked to the scanner chassis, then you need to strip off about 1/2 inch of the outer hide of the coax, being careful not to cut into the braid. Do this as close to the scanner as possible. Now, take end of the wire and wrap it around the bare shield wire, then tape up with electrical tape, to keep things neat and keep the wire from tarnishing up. In many cases this will eliminate the interference entirely.
when you get a chance, go outside and drive a ground rod at the base of the antenna mast. Just about any piece of metal pipe about 3 feet or so long will do for this. Then, hook the ground rod to the metal mast of the antenna with a short piece of wire. Make sure you have good metal - to - metal contact at all points.
You should have seen a sharp drop in the interference from doing all of this. In many cases, it will be eliminated entirely. If the scanner manufacturerers would put a three - prong plug on their equipment, we all wouldn`t have to go through this.
The foregoing info is especially important to those who are running a hand - held in the house using a power supply , or "wall wart" type of supply, since the transformer in the supply isolates your rig from ground. Interference can be really bad on these, since they generally have a "hotter" front end , and tend to pick up on the noise worse than a base rig.
Enjoy the peace and quiet.

This professional Spectrum Display Monitor is designed for use as a
panoramic signal display for VHF scanners & communication receivers such as
Icom, AOR, Realistic, etc.
The SDM-42A displays all signals present in the receiver's IF on a large 5"
CRT so that the operator can monitor signal activity up to a full 10mhz
wide. The operator can then quickly tune to signals as they appear in the
spectrum display. This greatly facilitates locating and tuning of
intermittent signals as well as surveying a particular frequency band. This
unit has been used for hobby purposes and is like new. Asking $750.00
Ron

YES ...thats possible, there,s a modification for the pro43 ,so that the
keylock switch does the job.

There must be added a diode and some wires thats all.

Search for "PRO43-Modification" in a search engin and you will find it.

(I will try to find it for you in meantime)

Been thinking for a long time about learning another language, but never quite get around to enrolling in that course? Been dreaming about travelling to far away places, but there's too much planning and arranging involved? Here's your trouble free opportunity for a unique learning experience. Study Spanish at the Institute of Progressive Communications on the campus of the University for Peace in Costa Rica surrounded by nature. Our all-inclusive four week package takes the hassle away. You'll live with a local family in a tranquil small town and be taken by their warmth and friendliness.

Are human rights, social justice, and the environment important issues for you? Feel that everyone has the right to communicate, but the mass media doesn't give everyone equal access? Learn more about the media from a progressive perspective from the staff of Radio For Peace International, a global media model with a shortwave station broadcasting from the campus of the University for Peace which has been in operation since 1987.

Four week courses provide you 80 hours of small group Spanish language instruction and 40 hours of media and radio coursework. Our small class sizes insure you personal and individualized attention.

Comments from recent students: "I liked the friendly, helpful professors and the activities like the fruit festival best...I feel like I definitely got my money's worth." K.W. "I feel I have learned quite a bit"thanks to the exercises, the personal attention, and the responsiveness of teachers and administrators...I love Ciudad Colon, and found everyone to be friendly and patient with me!" Anon.

It could be as simple as a broken connection to the antenna lead inside the scanner, or as complex as a bad oscillator, I.F. stage, or mixer stage. I would say that a trip to the repair shop would be in order.....

7305. AOR-8000 - AGC Time Constant - Technical Inquiry

Newsgroup: rec.radio.scanner
Date: 1998-09-30 00:00:00 UTC
From: rjlasky@ibm.net
Message-ID: <36126974.16381473@news-s01.ny.us.ibm.net>
Source record: 142865

In the AOR 8000 - the "Automatic Gain Control" (AGC) internal setting is quite fast. This makes the radio's audio rather "pumpy" on single sideband and causes the shortwave reception to be noiser than it needs to be.

When you set other radios from fast AGC to slow AGC - the single sideband comes in smoother and the SW has a somewhat reduced impulse and atmospheric noise in the background. Short term fading is also reduced slightly.

Can anyone point me to the AGC circuit components in the AR8000? I do not own a service manual.

I figure that if I were to parallel the AGC timing capacitor with another value - that the AGC R/C time constant would slow down and the audio should improve.

Which integrated circuit handles the AGC function?

What resistor and capacitor is responsible for how fast the gain is controlled? Which board are they on. I dont mind getting technical.

Does AOR sell service manuals?

I agree that Ethel was a very nice lady and will be missed by many of us.

You may want to check out Lentini Communications in Newington, Ct. They're open during weekdays to 6PM and Saturdays to 4PM. They're just off the Berlin Turnpike (the Parkway), so it will take only around 45 minutes from Exit 49N Trumbull to get there. Phone number is 860/666-6227 and you can ask for Alex (the owner).

Jeff, CompuServe HamNet

7309. Updated! Pro-Turbo New Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1998-09-30 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <3610ea42.6755632@news.iaw.on.ca>
Source record: 142869

VERSION 3.02

Web site for downloading back up!

It's now HERE!!
Pro-Turbo

Now Updated to do even more!

Now includes 2 groups of 4 user definable meters! Now you can
have that center tune meter that you have always wanted.

Now includes recording so that when you go out you can hear
everything that went on while you were gone, you can play this back
and listen only to those frequencies that you want to listen to.

You can record loops of 20 minutes length so that you have
that last 40 minutes of recording, you can do an immediate record of
what is happening right away. You can also record 24hrs a day if you
want and it can be selective, you can record just the channels that
you to record without locking out all the frequencies that you don't
want to record.

True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.

So if you would like to have a look, you can get more information
on the program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

Message-ID: <36127dd3.3871259@news.attcanada.net>
Source record: 142872

I think he said "interesting" frequencies :) hehe.. just
kidding, although it can get boring listening to Mississauga Transit
after a while. Well I'm relatively new to scanning and just split a
Pro-90 Trunk Tracker with a friend. I live in the Streetsville area,
which is right below the flight path for Pearson International
Airport.
Sometimes its kinda cool to go to the airport, watch planes
land and follow them on their frequencies. Start out on 125.4 for
arrivals and 128.8 for departures, and listen to ATC for further
frequencies.
You could also look up the freqencies for the trains if you
live anywhere near the tracks, or tune into marine frequencies for the
police or other boats on the water if you live near the lake.
Personally though, i love listening to the police :) That's
why I coughed up the extra cash for the truck tracker...
Good Luck!! If you find anything interesting, email me your
findings, i'd love to check them out.

Chris

7315. Royalty program/Scanner Product Network

Newsgroup: rec.radio.scanner
Date: 1998-09-30 00:00:00 UTC
From: ctpds49@aol.com
Message-ID: <19980930162607.22571.00004340@ng76.aol.com>
Source record: 142875

Thanks for your interest in the CTP Royalty program.

Here is how it works.

1. You place our banner on your web page. This
will consist of a banner gif Picture of our DS49 Speech Inversion
Descrambler and text advertising it.
Once you place this banner on your
page you are done. There is nothing else to do. You are
given a number that goes after the Descrambler model number
right on the banner.
ie... DS-10. When someone calls us to order
with a credit card or orders through the mail using
your number, you earn a $5.00 royalty for that sale.

2. Royalty checks will be mailed at the end of each quarter.
ie.. end of March/ June/ September/ December.

3. You can email us at any time for an update of your sales.

4. Sales will greatly depend on the amount of traffic your site
gets daily, so increasing your site traffic through search
engine registration and link exchanges will help us both.

5. For each sale where the customer does not remember the model
number, ie... DS-10 we will asign the sale to the next
name on our list of program participants. This way eventualy
you will get credit for a sale even if the customer cant
remember the model number.

That's all there is to it.

If you are interested in participating in the CTP
royalty program Email us your name and mailing address
and url of your web site and we will send you the banner asap.
